## Section 1: General Course Structure

### A. Definition of Credit:

1 Hour Lecture (L) per week	1 Credit
1 Hour Tutorial (T) per week	1 Credit
1 Hour Practical (P) per week	0.5 Credit

### B. Structure of Program

S. No.	Category	Credits
1	Humanities & Social Science Courses (HSMC)	13
2	Basic Science Courses (BSC)	16
3	Engineering Science Courses (ESC)	20
4	Program Core Courses (PCC)	69
5	Professional Elective Courses (PEC)	18
6	Open Elective Courses (OEC)	6
7	Employability Enhancement Skills (EES)	20
8	Mandatory Course (MC)	0
	<b>TOTAL</b>	<b>165</b>

### C. Course code and definition

Code	Definition
L	Lecture
T	Tutorial
P	Practical
C	Credits
<CS>	Professional core courses
<CS> PE	Professional Elective courses
<CS> OE	Open Elective Courses
<CS> MC	Mandatory Courses

- **Course level coding scheme:** Four-digit number used as suffix with the Course Code for identifying the level of the course. Thousand's place denotes regulation number (we use "3" for 2022-23 Regulation) Digit at hundred's place signifies the semester in which course is offered. Last two digits represent the serial order of course within the semester. For example, 3101, 3102, ... are courses offered during first semester.

### D. Category-wise Courses

#### Humanities & Social Science Courses (HSMC)

S. No.	Course Title	Semester	L-T-P-C
1	தமிழர் மரபு /Heritage of Tamils	I	1-0-0-1
2	Communicative English - I	I	3-0-2-4
3	தமிழரும் தொழில் நுட்பமும் /Tamil and Technology	II	1-0-0-1
4	Communicative English - II	II	3-0-2-4
5	Professional Ethics & Human Values	VII	3-0-0-3
<b>Total Credits</b>			<b>13</b>

**Basic Science Courses (BSC)**

S. No.	Course Title	Semester	L-T-P-C
1	Matrices and Calculus	I	3-2-0-4
2	Probability and statistics	II	3-2-0-4
3	Linear Algebra	III	3-2-0-4
4	Discrete Mathematics	IV	3-2-0-4
<b>Total Credits</b>			<b>16</b>

**Engineering Science Courses (ESC)**

S. No.	Course Title	Semester	L-T-P-C
1	Engineering Physics	I	3-0-2-4
2	Problem Solving Using C++ Programming	I	3-0-2-4
3	Application Development Practices	II	3-0-2-4
4	Digital System Design	II	3-0-2-4
5	Foundation of Data Science	III	3-0-2-4
<b>Total Credits</b>			<b>20</b>

**Program Core Courses (PCC)**

S. No.	Course Title	Semester	L-T-P-C
1	Introduction to Artificial Intelligence	I	3-0-2-4
2	Data Structures using C++	II	3-0-2-4
3	Database Management Systems	II	3-0-2-4
4	Introduction to Java Programming	II	3-0-2-4
5	Modern Computer Architecture	III	3-0-0-3
6	Design and Analysis of Algorithms	III	3-0-2-4
7	Web Technology	III	3-0-2-4
8	Computer Networks	III	3-0-2-4
9	Course Core Project-I	III	0-0-2-1
9	Operating Systems	IV	3-0-2-4
10	Machine Learning: Concepts and Applications	IV	3-0-2-4
11	Big Data Analytics	IV	3-0-2-4
12	Parallel programming through Python	IV	3-0-2-3
13	Computing Theory & Compiler Design	V	3-0-0-3
14	Federated learning	V	3-0-0-3
15	Natural language Processing	V	3-0-2-4
16	Machine learning operations	VI	3-0-0-3
17	Deep Learning For Vision	VI	3-0-2-3
18	Generative AI	VI	3-0-2-4
<b>Total Credits</b>			<b>66</b>

### Professional Elective courses

S. No.	Course Title	Semester	L-T-P-C
1	Professional Elective – I	V	3-0-2-3
2	Professional Elective – II	V	3-0-2-3
3	Professional Elective – III	V	3-0-2-3
4	Professional Elective – IV	VI	3-0-2-3
5	Professional Elective – V	VI	3-0-2-3
6	Professional Elective – VI	VI	3-0-2-3
<b>Total Credits</b>			<b>18</b>

### Open Elective Courses (OEC)

S. No.	Course Title	Semester	L-T-P-C
1	Open Elective – I	VI	3-0-0-3
2	Open Elective – II	VII	3-0-0-3
<b>Total Credits</b>			<b>6</b>

### Mandatory Course (MC)

S. No.	Course Title	Semester	L-T-P-C
1	Mandatory Course – I	III	2-0-0-0
2	Mandatory Course – II	IV	2-0-0-0
<b>Total Credits</b>			<b>0</b>

### E. Induction Program

- **Catapult** is a dynamic week-long event designed for our incoming first-year students, offering an immersive introduction to the diverse array of clubs and activities across the college campus. In addition to familiarizing them with our labs and Centers of Excellence (COEs), Catapult aims to acclimate first-year students to college life, ensuring they feel at ease with the forthcoming experiences of their four-year journey.
- This initiative fosters meaningful connections between seniors and juniors, providing a platform for them to explore departmental projects and engage in collaborative activities, thereby enhancing camaraderie and knowledge sharing within the college community.

### F. Evaluation Scheme

#### a. For Theory Courses:

The weightage of Internal assessment is 40% and for End Semester Exam is 60%  
The student has to obtain at least 50% marks individually both in internal assessment and end semester exams to pass

#### b. For Practical Courses:

The weightage of Internal assessment is 60% and for End Semester Exam is 40%  
For Theory cum Lab  
The student has to obtain at least 50% marks individually both in internal assessment and end semester exams to pass.

#### c. For Theory Cum Practical Courses:

The weightage of Internal assessment is 50% and for End Semester Exam is 50%  
The student has to obtain at least 50% marks individually both in internal assessment and end semester exams to pass

**Note:** The internal assessment is based on the student's performance in 3 Internal Assessment (IA) exams, quizzes, assignments, class performance, attendance, etc.

**d. For Project works:**

Assessment of project works comprises three internal reviews and an end-of-semester evaluation. Internal reviews, worth 40 marks in total, encompass assessment criteria such as Project Synopsis/Proposal Evaluation, Methodology and Design of Existing System, Feasibility of Project Proposal, Planning of Project Work, and Team Work. At the conclusion of the semester, 20 marks are designated for assessing the quality of the report, while the remaining 40 marks are reserved for evaluating performance in viva-voce, demonstration of the work, and other relevant factors.

**G. Learning Beyond Class Room**

- a. Students should be encouraged to visit Centers of Excellence (COEs) in the campus and learn additional technical skills
- b. Students should be encouraged to participate in internal / external competitions, hackathons, etc. on a regular basis

**Section 2: Semester wise Structure and Curriculum for UG Course in COMPUTER SCIENCE & ENIGINEERING (ARTIFICIAL INTELLIGENCE & MACHINE LEARNING)**

## Semester I

Course Code	<b>MATRICES AND CALCULUS</b>	L	T	P	C
<b>MA3101</b>		3	1	0	4

### COURSE OBJECTIVES:

The main objectives of this course are to:

- To develop the use of matrix algebra techniques that is needed by engineers for practical applications.
- To introduce the concept of ordinary differential equations in engineering problems.
- To familiarize the student with functions of several variables. This is required in many branches of engineering.
- To acquire the knowledge of evaluating multiple integrals and their applications.
- To acquire the knowledge of vector calculus needed for problems in all engineering disciplines.

### Course Description

This course provides an in-depth study of matrices and calculus, focusing on the fundamental concepts, techniques, and applications of both matrices and calculus

### Prerequisites

A solid understanding of algebra, trigonometry, and pre-calculus is required.

### UNIT I MATRICES

12

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley – Hamilton theorem – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms – Engineering Applications: Stretching of an elastic membrane– Capacitor– Microphone–Networks and Graphs – Communications coding theory.

### UNIT II ORDINARY DIFFERENTIAL EQUATIONS

12

Higher order linear differential equations with constant Coefficients–Method of variation of parameters Homogenous equation of Euler’s and Legendre’s type – System of simultaneous linear differential equations with constant Coefficients – Engineering Applications: Electric Circuits and Mechanical Vibrations – Simple Harmonic motion.

### UNIT III FUNCTIONS OF SEVERAL VARIABLES

12

Partial differentiation – Homogeneous functions and Euler’s theorem – Total derivative – Change of variables – Jacobians –Taylor’s series for functions of two variables – Engineering Applications: Maxima and minima of functions of two variables and Lagrange’s method of undetermined multipliers–Transformation of co – ordinates–Functional Dependence.

### UNIT IV MULTIPLE INTEGRALS

12

Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Triple integrals – Volume of solids – Change of variables in double and triple

integrals – Engineering Applications: Moments, centres of mass, moment of inertia – Centroid – Centre of Gravity.

## **UNIT V VECTORCALCULUS**

**12**

Gradient and directional derivative – Divergence and Curl – Vector identities – irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral – Area of a curved Surface – Volume Integral – Green’s, Gauss divergence and Stoke’s Theorems – Engineering Applications: Stream line in fluid Dynamic – Heat transforms

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by Maths Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

- C01.** Recalling matrix algebra successful methods for solving the practical problems.
- C02.** Apply various techniques in solving ordinary differential equations.
- C03.** Apply the differential calculus ideas to several functions.
- C04.** Apply the multiple integral ideas in solving areas, volumes and other practical problems.
- C05.** Understand the Gradient, divergence and curl of a vector point function and related identities.

### **Text Books:**

## **YouTube Resources:**

**Khan Academy** - Linear Algebra: Khan Academy offers a comprehensive playlist on Linear Algebra, which covers topics such as matrices, vectors, eigenvalues, eigenvectors, and more. This resource is great for beginners and includes clear explanations and worked examples.

**3Blue1Brown** - Essence of Linear Algebra: This series by 3Blue1Brown provides a visual and intuitive understanding of linear algebra concepts. While not specifically focused on matrices, it covers foundational ideas that are essential for understanding matrices.

**MIT OpenCourseWare** - Multivariable Calculus: MIT OpenCourseWare provides full lectures on Multivariable Calculus by Professor Denis Auroux. The lectures cover topics such as partial derivatives, multiple integrals, vector calculus, and applications. It's a more advanced resource for those looking to delve deeper into calculus.

**PatrickJMT - Calculus Tutorials:** PatrickJMT offers a wide range of calculus tutorials covering differentiation, integration, limits, and applications. The tutorials are concise and easy to follow, making them suitable for both beginners and those looking for additional practice.

**Professor Leonard - Calculus 1, 2, and 3:** Professor Leonard provides comprehensive lectures on Calculus 1, 2, and 3. His videos cover topics such as limits, derivatives, integrals, sequences, series, multivariable calculus, and more. The lectures are detailed and thorough, making them suitable for students at various levels.

**MathTheBeautiful** - Linear Algebra: MathTheBeautiful offers a series of lectures on Linear Algebra, covering topics such as matrix operations, determinants, eigenvalues, eigenvectors, and applications. The videos are well-structured and provide clear explanations of concepts.

**The Organic Chemistry Tutor** - Calculus: This channel offers a variety of calculus tutorials covering topics such as limits, derivatives, integrals, differential equations, and applications. The videos are structured in a way that is easy to follow and understand.

**60 PERIODS**

**TOTAL:60 PERIODS**

Course Code	<b>HERITAGE OF TAMILS</b>	L	T	P	C
<b>HS3101</b>		1	0	0	1

### **COURSE OBJECTIVES:**

The main objectives of this course are to:

- To Understand the historical development of the Tamil civilization from ancient times to the present day,.
- To Explore the heritage of rock art paintings to modern art and sculptures.
- To familiarize the folk and martial art.
- To acquire the knowledge of thinai concepts of tamil
- To investigate the contribution of tamils to indian national movement and indian culture.

### **Course Description**

This course provides an in-depth study of the historical development of the Tamil civilization from ancient times to the present day, including its interactions with other cultures and civilizations.

### **Prerequisites**

A genuine interest in Tamil heritage

### **UNIT I LANGUAGE AND LITERATURE**

**3**

Language Families in India – Dravidian Languages – Tamil as a Classical Language – Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature – Management Principles in Thirukural – Tamil Epics and Impact of Buddhism & Jainism in Tamil Land – Bakthi Literature Azhwars and Nayanmars – Forms of minor Poetry – Development of Modern literature in Tamil – Contribution of Bharathiyar and Bharathidhasan.

### **UNIT II HERITAGE – ROCK ART PAINTINGS TO MODERN ART – SCULPTURE**

**3**

Hero stone to modern sculpture – Bronze icons – Tribes and their handicrafts – Art of temple car making – – Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments – Mridhangam, Parai, Veenai, Yazh and Nadhaswaram – Role of Temples in Social and Economic Life of Tamils.

### **UNIT III FOLK AND MARTIAL ARTS**

**3**

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance – Sports and Games of Tamils.

### **UNIT IV THINAI CONCEPT OF TAMILS**

**3**

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature – Aram Concept of Tamils – Education and Literacy during Sangam Age – Ancient Cities and Ports of Sangam Age – Export and Import during Sangam Age – Overseas Conquest of Cholas

### **UNIT V CONTRIBUTION OF TAMILS TO INDIAN NATIONAL MOVEMENT AND INDIAN CULTURE**

**3**

Contribution of Tamils to Indian Freedom Struggle – The Cultural Influence of Tamils over the other parts of India – Self – Respect Movement – Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

## **Course Format**

Lectures and discussions, Guest lectures by Tamil Experts, Group discussions and presentations, Online resources and tutorials

## **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## **COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

**CO1.** Understanding of the diverse aspects of Tamil heritage and its significance in the context of world civilizations.

**CO2.** Analysing the heritage of rock art paintings to modern art and sculptures.

**CO3.** Interpreting the folk and martial arts

**CO4.** Critically analysing and interpreting the thinai concept of Tamils

**CO5.** Explore sense of pride and ownership in Tamil heritage and be inspired to contribute to its preservation and promotion in the future.

## **Text Books Cum Reference Books**

1. Social Life of Tamils (Dr. K.K. Pillay) A joint publication of TNTB & ESC and RMRL – (in print)
2. Social Life of the Tamils – The Classical Period (Dr. S. Singaravelu) (Published by: International Institute of Tamil Studies.
3. Historical Heritage of the Tamils (Dr. S.V. Subatamanian, Dr.K.D. Thirunavukkarasu) (Published by: International Institute of Tamil Studies).
4. The Contributions of the Tamils to Indian Culture (Dr.M.Valarmathi) (Published by: International Institute of Tamil Studies.)
5. Keeladi – Sangam City Civilization on the banks of river Vaigai (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
6. Studies in the History of India with Special Reference to Tamil Nadu (Dr. K.K.Pillay) (Published by: The Author)
7. Porunai Civilization (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
8. Journey of Civilization Indus to Vaigai (R. Balakrishnan) (Published by: RMRL).

**TOTAL: 15 PERIODS**

Course Code	<b>COMMUNICATIVE ENGLISH –I</b>	L	T	P	C
<b>HS3102</b>		3	0	2	4

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- To improve the communication competency.
- To learn basic grammatical structures in suitable contexts.
- To build students English language skills through LSRW.
- To enable the students to write in English precisely and effectively
- To develop language proficiency in expressing their opinions

**Course Description**

This course designed to improve students' proficiency in spoken and written English for effective communication in various contexts. Emphasis is placed on building vocabulary, enhancing grammar knowledge, improving pronunciation, and fostering confidence in using English for daily communication.

**Prerequisites**

A Basic understanding of English grammar and vocabulary

**Unit I – Introduction to Effective Communication and Integrals of Communication**

**Introduction to Effective Communication 1**

What is effective communication? Why is communication critical for excellence during study, research, and work? What are the seven C’s of effective communication?

**Integrals of Communication (Greetings &Introduction) 8**

Listening – Listening comprehensions, listening to News, Speaking – Just A Minute, Introducing a friend, Reading – Reading Newspaper / Articles/ Magazines, Reading comprehension ,Vocabulary – Synonyms& Antonyms, Acquaintance with Prefixes & suffixes from foreign languages in English to form derivatives and Word formation, Grammar – Parts of SpEsh, Mixed Tenses, Active & Passive Voice, Writing –Letter of Introduction, Developing the Hints

**Unit II – Giving and Receiving Instructions 9**

Listening – Listening to short stories, Narrations and Persuasive spEsh, Speaking – Giving Instructions to use the Product/ Presenting or summarizing about a product , Reading – Reading Advertisements / Biographies , Vocabulary – Abbreviation, Acronyms, One – word Substitutes, Grammar – WH Questions/Yes or No Questions, Imperatives, Writing – Instructions, Paragraph Writing

**Unit III – Describing People and Places 9**

Listening – Listening to the description of a product ,Speaking –Picture Description, Narrating personal experiences and events ,Reading – Gadget Reviews, User Manuals, Vocabulary – Homonyms, Homophones, Compound Words,Grammar – Adjectives, Adverbs, Articles, Writing –Recommendations, Product/ Process Description.

#### **Unit IV –Visualization and Classification**

9

Listening – TED talks , Speaking – Interviewing a celebrity/Famous Personality, Reading – Company profiles, Business Letters ,Vocabulary– Discourse Markers, Linking words and Phrases Collocation., Grammar – Pronouns, Conjunction, Preposition, Writing – Interpretation of Charts and Graphs

#### **Unit V – Exposition**

9

Listening – Watching Movies / Listening to Dialogues and Conversations, Speaking – Role play, Panel Discussion, Debate, Reading – Blogs, Novels, Short Stories, Vocabulary – Phrasal Verbs, Grammar– Simple/Compound/Complex Sentences, Error Spotting, Punctuation, Writing – Descriptive Essay, Dialogue Writing

**THEORY – 45 PERIODS**

#### **List of Exercises:**

1. Extempore (Oral)
2. Conversation on asking directions
3. Picture Description, about purchasing a product.
4. Summarising a TED talk.
5. Role play.

**PRACTICAL – 30 PERIODS**

#### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

#### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

#### **COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

- CO1.** Use appropriate words in a professional context
- CO2.** Gain an understanding of basic grammatical structures and use them in the right context.
- CO3.** Write definitions, descriptions, narrations and essays on various topics
- CO4.** Speak fluently and accurately in formal and informal communicative contexts
- CO5.** Express their opinions effectively in both oral and written medium of communication.

#### **Text Books:**

1. English for Engineers & Technologists Orient Blackswan Private Ltd. Department of English, Anna University, (2020 edition)
2. English for Science & Technology Cambridge University Press, 2021. Authored by Dr. Veena Selvam, Dr. Sujatha Priyadarshini, Dr. Deepa Mary Francis, Dr. KN. Shoba, and Dr. Lourdes Jovani, Department of English, Anna University.
3. Professional English-II, V.K.Publications, Dr.S.N. Mahalakshmi.

#### **.References:**

1. Technical Communication – Principles and Practices By Meenakshi Raman & Sangeeta Sharma, Oxford Univ. Press, 2016, New Delhi.
2. A Course Book On Technical English By Lakshminarayanan, Scitech Publications (India) Pvt. Ltd.
3. Learning to Communicate–Dr.V. Chellammal. Allied Publishers, New Delhi,2003

## **YouTube Resources:**

**EnglishLessons4U** - This channel provides a wide range of lessons covering grammar, vocabulary, pronunciation, and conversational English. The videos are suitable for learners at various levels.

**Learn English with Emma** - Emma's channel offers engaging lessons on grammar, vocabulary, and pronunciation, along with tips for improving speaking and listening skills.

**BBC Learning English** - BBC Learning English offers a variety of videos covering grammar, vocabulary, pronunciation, and practical language skills. The content is suitable for learners at different proficiency levels.

**English with Lucy** - Lucy's channel features lessons on grammar, vocabulary, idioms, and pronunciation, presented in a clear and accessible manner.

**Speak English With Vanessa** - Vanessa provides lessons focused on practical language skills, such as everyday conversations, expressions, and cultural insights.

**EnglishClass101** - This channel offers lessons for learners of all levels, covering grammar, vocabulary, pronunciation, and cultural topics. The videos include dialogue practice and interactive exercises.

**Rachel's English** - Rachel's channel specializes in pronunciation and accent reduction, offering tips and exercises to improve spoken English clarity and fluency.

**EnglishAnyone** - This channel offers tips and techniques for improving English fluency and confidence in speaking. The videos cover various aspects of communication, including conversation skills and mindset.

**EngVid** - EngVid features lessons taught by different instructors covering grammar, vocabulary, pronunciation, and practical English skills. The videos are categorized based on proficiency levels and topics.

**EnglishClass101.com** - This channel offers a variety of lessons, including vocabulary, grammar, pronunciation, and cultural insights. The videos are part of a larger online platform with additional resources.

**TOTAL:75 PERIODS**

Course Code	<b>ENGINEERING PHYSICS</b>	L	T	P	C
<b>PH3101</b>		3	0	2	4

### **COURSE OBJECTIVES:**

The main objectives of this course are to:

- To make the students effectively understand basics of mechanics and properties of matter.
- To provide an overview of sound and ultrasonic production, detection and applications.
- To introduce the basics of lasers.
- To enrich the basic knowledge of optical fiber
- To understand quantum mechanical phenomena and apply in computing fields.

### **Course Description**

This course typically provides students with a strong foundation in physics principles and their application to engineering problems. It emphasizes problem-solving skills, critical thinking, and the ability to apply theoretical concepts to real-world engineering situations.

### **Prerequisites**

- Mathematics
- Physics

### **UNIT I MECHANICS AND PROPERTIES OF MATTER**

**9**

Center of mass (CM) – motion of the CM – kinetic energy of system of particles – moment of inertia – theorems of M. I – moment of inertia of continuous bodies (Ring, Disc) – conservation of angular momentum – gyroscope. Elasticity – Hooke’s law – stress –strain diagram – Factors affecting elasticity – bending of Beams – Young’s modulus by uniform bending and non – uniform bending – Torsional Pendulum – I – shaped girders.

### **UNIT II ACOUSTICS AND ULTRASONICS**

**9**

Acoustics: Classification and characteristics of sound – decibel – Weber – Fechner law – affecting acoustics of buildings and their remedies – Methods of determination of Absorption Coefficient. - Doppler effect. Ultrasonic – Production of Ultra sonics by Magnetostriction and piezoelectric methods – acoustic grating – Non Destructive Testing – pulse echo system through transmission and reflection modes – A, B and C – scan displays.

### **UNIT III LASER**

**9**

Laser: Characteristics – Spontaneous and stimulated emission – Pumping methods – Optical Resonator – Active medium and Active centre – Einstein’s coefficient – population inversion – Types of laser – Nd – YAG laser, CO<sub>2</sub> laser, Semiconductor lasers: homo junction and hetero junction I -Industrial and medical application

### **UNIT IV FIBRE OPTICS**

**9**

Fiber optics – Principle, Numerical aperture and acceptance angle – types of optical fibers (material, refractive index, mode) – attenuation, dispersion – Fibre Optical Communication system (Block diagram) – Displacement sensors- Temperature/Pressure sensors – Wavelength division multiplexing – Optical fibers in computers.

## UNIT V QUANTUM MECHANICS

9

Planck's quantum theory – Compton effect – Particle properties of wave: Matter waves, wave function – The Schrodinger equation (Time dependent and time independent forms) – Particle in a infinite potential well: 1D,2D and 3D Boxes – Scanning Tunneling microscope.

**THEORY: 45 PERIODS**

### PRACTICAL EXERCISES (FIVE ONLY)

1. Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids.
2. Simple harmonic oscillations of cantilever.
3. Uniform bending – Determination of Young's modulus.
4. Laser – Determination of the wave length of the laser using grating.
5. Optical fibre – Determination of Numerical Aperture and acceptance angle.
6. Acoustic grating – Determination of velocity of ultrasonic waves in liquids.
7. Michelson Interferometer.

**PRACTICAL: 30 PERIODS**

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

- CO1.** Understand the importance of mechanics and express their knowledge in properties of matter
- CO2.** Analyze the applications of acoustics and ultrasonic in engineering field.
- CO3.** Acquire knowledge in laser and its applications
- CO4.** Demonstrate a strong foundational knowledge in fiber optics
- CO5.** Comprehend and apply quantum mechanical principles.

**YouTube Resources:**

MIT OpenCourseWare: MIT offers a variety of engineering physics courses through their OpenCourseWare platform. These courses often include lecture videos covering topics such as mechanics, electromagnetism, thermodynamics, and quantum mechanics.

Khan Academy: Khan Academy provides a wide range of physics tutorials, including those relevant to engineering physics. Their videos cover introductory to advanced topics, making it suitable for learners at different levels.

The Organic Chemistry Tutor: This channel covers various physics topics, including mechanics, thermodynamics, and electromagnetism. The explanations are clear and concise, making it easy to understand complex concepts.

Michel van Biezen: This channel offers physics tutorials covering a broad range of topics, including engineering physics. The videos are well-explained and include example problems to help reinforce understanding.

Walter Lewin's Lectures on Physics (MIT): Although these lectures are a bit older, they are timeless classics. Walter Lewin's engaging teaching style and clear explanations make these lectures a valuable resource for learning engineering physics concepts.

Physics Online: This channel provides physics tutorials and lectures, covering topics such as mechanics, electromagnetism, and thermodynamics. The videos are organized by topic, making it easy to find content relevant to engineering physics.

Engineering Physics by Jitendra Hirwani: This channel specifically focuses on engineering physics topics, including mechanics, thermodynamics, and electromagnetism. The videos cover theory as well as problem-solving techniques.

NPTEL - National Programme on Technology Enhanced Learning: NPTEL offers engineering physics courses that cover a wide range of topics. Their lectures are delivered by professors from top Indian institutes and provide in-depth coverage of engineering physics concepts.

**TOTAL: 75 PERIODS**

Course Code	<b>INTRODUCTION TO ARTIFICIAL INTELLIGENCE</b>	L	T	P	C
<b>AD3101</b>		3	0	2	4

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- Learn the basic AI approaches
- Develop problem-solving skills
- Explore Python and its libraries used in Artificial Intelligence
- To grasp logical reasoning and apply it in decision-making
- To understand the concept of probabilistic reasoning in real-time

**Course Description**

This introductory course provides students with a foundational understanding of Artificial Intelligence (AI), one of the most transformative technologies of the 21st century.

**Prerequisites**

- . Basic programming skills (preferably in Python) and
- familiarity with fundamental concepts in mathematics and computer science

**UNIT I INTRODUCTION 9**

Introduction to Artificial Intelligence (AI) – Agents and Environments – concept of rationality – nature of environments –structure of agents, Python – variables, data types, operators, and control flow statements.

**UNIT II DATA STRUCTURES FOR AI 9**

Lists – Tuples – Strings – Dictionaries – sets, Libraries – Introduction to NumPy – Numerical operations – Introduction to Matplotlib – Scikit-learn – Getting started with pandas – Data Frame Basics – Key Operations on Data Frames.

**.UNIT III LEARNING ALGORITHMS FOR AI 9**

Introduction to ML – Supervised Learning: Linear Regression – Logistic Regression – Support Vector Machine – Unsupervised Algorithm: K-Means Clustering – Principle Component Analysis.

**UNIT IV LOGICAL REASONING 9**

Knowledge-based agents – propositional logic – propositional theorem proving – propositional model checking – agents based on propositional logic. First-order logic – syntax and semantics – knowledge representation and engineering – inferences in first-order logic – forward chaining – backward chaining – resolution.

**UNIT V PROBABILISTIC REASONING 9**

Acting under uncertainty – Bayesian inference – naïve Bayes models. Probabilistic reasoning – Bayesian networks – exact inference in BN – approximate inference in BN – causal networks.

**Theory: 45 periods**

**Practical Exercises**

1. Write a Python program to use logical operators to evaluate the truth value of a statement.
2. Write a Python program for clinical diagnosis based on symptoms. The program reads symptoms from the user, and diagnoses with influenza, common cold, and allergies.

3. Write a Python program to create a list of numbers, and find the largest and smallest numbers in the list.
4. Write a Python program to create a dictionary of words and their meanings, and print out the meaning of a given word.
5. Implement a linear regression model to predict the price of a house given its features, such as the number of bedrooms, the square footage, and the location
6. Implement a k-means clustering algorithm to cluster the customers of a retail store based on their spending habits
7. Implement propositional model-checking algorithms
8. Implement forward chaining, backward chaining, and resolution strategies
9. Build naïve Bayes model
10. Implement Bayesian networks and perform inferences

### **FINAL PROJECT**

- **Sample Problem Statement (Predicting Uber fares with AI)**

The project is about on world's largest taxi company Uber inc. In this project, we are looking to predict the fare for their future transactional cases. Uber delivers service to lakhs of customers daily. Now it becomes important to manage their data properly to come up with new business ideas to get best results. Eventually, it becomes vital to estimate the fare prices accurately.

Dataset: <https://www.kaggle.com/datasets/yasserh/uber-fares-dataset>

- Define your own problem statement with this template.

**Practical: 30 periods**

### **Problem-solving Assignments**

1. List 5 tasks that you will like a computer to be able to do within the next 5 years.
2. Study 8-Puzzle, 8 - Queens problem, Cryptarithmic.
3. Write a Python program to create a NumPy array of 100 random numbers and find the mean, standard deviation, and variance of the array. Classify the iris Dataset using SVM scikit-learn library in Python.
4. Implement a principle component analysis algorithm to reduce the dimensionality of a data set.
5. Classify the iris Dataset using SVM scikit-learn library in Python.
6. Implement a principle component analysis algorithm to reduce the dimensionality of a data set
7. Design a Knowledge-Based Agent called “Smart Home Visitor Access System” using propositional logic rules to make decisions about granting access to visitors. By combining information from the sensors and the knowledge base, the KBA ensures that access decisions are based on predefined criteria, promoting security and efficiency in the smart home system.
8. Design the agent for Smart Home Visitor Access System with Components, Propositional Logic Rules and Inference Process.
9. Design a Bayesian Network for a medical expert system focused on diagnosis of a specific disease (say Diabetes) based on a few relevant symptoms and risk factors.

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## **COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

- C01:** Explain intelligent agent frameworks
- C02:** Develop simple Systems using Python data structure
- C03:** Understand Machine learning for Artificial intelligence Systems
- C04:** Perform logical reasoning for design knowledge Based Agent
- C05:** Perform probabilistic reasoning under uncertainty

## **Text Books:**

1. Stuart Russell and Peter Norvig, "Artificial Intelligence – A Modern Approach", Fourth Edition, Pearson Education, 2021.
2. Andreas C. Muller, Sarah Guido, "Introduction to Machine Learning With Python", O'Reilly Media, Inc.
3. Paul Deitel and Harvey Deitel, "Python for Programmers", Pearson Education, 1st Edition, 2021.

## **References:**

1. 1 Dan W. Patterson, "Introduction to AI and ES", Pearson Education, 2007
2. John Paul, "Beginning Programming with Python For Dummies Mueller", John Wiley & Sons, 2014.
3. Kevin Night, Elaine Rich, and Nair B., "Artificial Intelligence", McGraw Hill, 2008

## **YouTube Resources:**

**3Blue1Brown:** Although not exclusively focused on AI, 3Blue1Brown's videos on linear algebra and calculus concepts are incredibly useful for understanding the mathematical foundations of AI algorithms, such as neural networks.

**Sentdex:** This channel primarily focuses on Python programming tutorials for AI and machine learning applications. Sentdex covers a wide range of topics, from basic Python syntax to advanced machine learning algorithms.

**Artificial Intelligence - All in One:** This channel provides comprehensive tutorials on various AI topics, including machine learning algorithms, deep learning frameworks, and AI applications. The videos are well-structured and suitable for beginners and intermediate learners.

**Andrew Ng:** Andrew Ng, a prominent figure in the AI community, shares lectures and talks on AI and machine learning concepts. His lectures are insightful and cover topics like supervised learning, unsupervised learning, and deep learning.

**Google Developers:** Google Developers offers tutorials, talks, and demos on AI and machine learning tools and technologies developed by Google, such as TensorFlow and Google Cloud AI services. The channel provides practical insights into implementing AI solutions.

**TOTAL: 75 PERIODS**

Course Code	<b>APPLICATION DEVELOPMENT PRACTICE</b>	L	T	P	C
<b>AM3101</b>		3	0	2	4

**COURSE OBJECTIVES:**

The main objectives of this course are to:

1. To understand the web programming using Hypertext Markup Language (HTML)
2. To develop responsive websites using Cascading Style Sheets (CSS)
3. To implement interactive and dynamic effects on webpages using JavaScript.
4. To develop dynamic web applications using Document Object Model (DOM).
5. To develop dynamic web applications with Asynchronous JavaScript and deployment in a GitHub repository.

**Course Description**

This course designed to provide students with the knowledge and skills necessary to develop dynamic and interactive websites and focuses on front end aspects of web programming

**Prerequisites**

. A genuine interest and willingness to learn web development and HTML are essential

**UNIT I - HYPERTEXT MARKUP LANGUAGE (HTML) 9**

Introduction to HTML – HTML Document Structure –Text – Lists –Frames, Table and Div tags – Forms –Images –Hyperlinks – Tag Attributes– Structuring Webpage- Semantic HTML.

**UNIT II – CASCADING STYLESHEET (CSS) 9**

Introduction to CSS - Inline, Internal and External CSS - Styling Text - Combining Selectors - Class and ID Selectors - Working with Colors - Styling Hyperlinks – Layouts: Float, Flex box and CSS Grid– Web Design Rules and Frameworks.

**UNITIII – JAVASCRIPT 9**

Introduction to JavaScript–Variables- Data Types –Operators- Statements and Expressions–Strings and Template Literals - if / else Statements - switch Statement - Functions – Arrays –Classes and Objects- Looping Statements.

**UNIT IV– DOCUMENT OBJECT MODEL (DOM) 9**

Introduction to DOM–HTML elements access using DOM (find, change the content and replace/remove HTML elements) – Events Fundamentals – event listener and its methods– mouse, keyboard and from events

**UNIT V– ASYNCHRONOUS JAVASCRIPT AND GITHUB 9**

JavaScript: Behind the scene - JS Callbacks - JS Asynchronous - JS Promises - JS Async/Await– Git - GIT environment and setting up - GIT commands- GitHub –Pushing files to GitHub.

**Theory: 45 Periods**

**Practical Exercises:**

1. Design a webpage using HTML basic tags (text elements only).
2. Develop website with suitable contents and links (use text, form and anchor tag).
3. Design webpages using lists and table tags.
4. Design a webpage using using HTML and CSS.

5. Develop a website with suitable CSS layouts.
6. Write a JavaScript program to Check if a Number is Odd or Even.
7. Write a JavaScript program to find sum of natural numbers.
8. Write a JavaScript program to find and change the content of the HTML elements.
9. Write a JavaScript program to handle events (Mouse/Keyboard/Form events).
10. Write a JavaScript program to display a text using set Timeout method.
11. Write a program to perform JavaScript call back function.

**Final Project:**

12. Design and develop a web application for an E-Commerce portal (like Filpart, Amazon) with the following features:
13. 1) Create a menu item to navigate entire website (Home, Product items, Contact Us, About Us)
14. 2) Create and check the input field validation for User Registration and Login form
15. 3) Display the items of Orders list, Wish list, comments & reviews, Customer Care and reporting options on the webpage.
16. 4) Uploading the Project in the GitHub Repository

**Practicals: 30 Periods**

**Problems-solving Assignments:**

- Develop a web application for commercial organization like restaurant, spa services etc., using HTML tags (Text, Lists, Frames, Table, Div, Images, Hyperlinks tags)
- Develop a web application for higher educational institutions – college/university using HTML and CSS (apply inline, internal and external styles - Use style properties for background, text effects, positioning, link).
- Develop a web page for creating online bank account with Login, Registration form, and Dashboard with drop down menus. Perform validation on the form elements data such as entering valid data for required fields or not.
- Write a JavaScript program to perform replacement and removal of HTML elements.
- Write a JavaScript program to demonstrate the use of JavaScript promise.

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

**CO1** . Implement websites using HTML elements

**CO2** . Apply styling to HTML content using CSS

**CO3** . Implement dynamic effects using JavaScript

**CO4** . Manipulate the webpage elements using DOM

**CO5** . Develop webpage with asynchronous JavaScript and deploy the webpage using Github repository

**Text Books:**

1. Jennifer Niederst Robbins, "Learning Web Design, A beginner's guide to HTML, CSS, JavaScript, and WebGraphics", O'Reilly Media, 5th Edition, 2018.
2. Ben Frain, "Responsive Web Design with HTML5 and CSS: Build future-proof Responsive Websites using latest HTML5 and CSS techniques", 4th Edition, 2023.
3. [David Flanagan](#), "JavaScript: The Definitive Guide: Master the World's Most-Used Programming Language", 7th Edition, O'Reilly Media, Inc., 2020.

**References:**

1. P.J. Deitel, H.M. Deitel, and Nieto, "Internet and World Wide Web - How to Program", PrenticeHall, 6th Edition, 2020.
2. Jon Duckett, "HTML and CSS: Design and Build Webs", Wiley, 2011.

**YouTube Resources:**

Traversy Media: Traversy Media covers a wide range of web development topics, including HTML, CSS, JavaScript, and various frameworks like React, Vue.js, and Node.js. The tutorials are well-structured and suitable for beginners as well as more experienced developers.

frESodeCamp.org: The frESodeCamp YouTube channel offers tutorials on HTML, CSS, JavaScript, and other programming topics. It also provides full courses on web development, including responsive web design, front-end libraries, and back-end development.

The Net Ninja: The Net Ninja provides tutorials on web development technologies, including HTML, CSS, JavaScript, and frameworks like React and Vue.js. The tutorials are beginner-friendly and cover both basic concepts and advanced topics.

Programming with Mosh: Programming with Mosh offers high-quality tutorials on web development, covering HTML, CSS, JavaScript, and more. Mosh's tutorials are clear, concise, and suitable for beginners looking to learn web programming.

Academind: Academind covers a wide range of web development topics, including HTML, CSS, JavaScript, and various frameworks and libraries. The tutorials are well-explained and often include practical projects to help reinforce learning.

Dev Ed: Dev Ed provides tutorials on web development and design, covering HTML, CSS, JavaScript, and UI/UX design principles. The tutorials are engaging and often include practical tips and tricks for building modern websites and web applications.

**TOTAL:75 PERIODS**

Course Code	<b>PROBLEM SOLVING USING C++ PROGRAMMING</b>	L	T	P	C
<b>AM3102</b>		3	0	2	4

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- To learn the concepts of object oriented programming using C++
- To explore function overloading and constructors in C++
- To gain knowledge of the concepts inheritance and polymorphism in C++
- To gain comprehension about the concepts exception handling in C++
- To learn the concepts Files in C++

**Course Description**

This course provides students with a comprehensive understanding of problem-solving techniques using the C++ programming language. Students will learn how to write modular and efficient code, emphasizing good programming practices

**Prerequisites**

- Basic understanding of programming concepts
- familiarity with any one high-level programming language

**UNIT I CONCEPTS OF OOP AND C++**

**9**

Object oriented programming concepts – objects – classes – methods and messages – abstraction and encapsulation – inheritance – abstract classes – polymorphism. Introduction to C++ - Classes and objects: classes - structures and classes - unions and classes - parameterized constructors -static class members - scope resolution operator - nested classes - local classes - passing objects to functions - returning objects – object assignment. Arrays, Pointers, References and Dynamic Allocation Operators: Arrays of Objects – Pointers to Objects – Type Checking – This Pointer –Pointers to Derived Types – Pointers to Class Members – References – Dynamic Allocation Operators

**UNIT II FUNCTION OVERLOADING AND CONSTRUCTORS**

**9**

Function Overloading–Overloading Constructors–Copy Constructors – finding the address of overloaded Function–Default Function Arguments–Function Overloading and Ambiguity.

**UNIT III INHERITANCE AND POLYMORPHISM**

**9**

Inheritance: Base-Class Access Control–Inheritance and Protected Members–Inheriting Multiple Base Classes – Constructors, Destructors and Inheritance – Granting Access – Virtual Base Classes. Virtual functions and Polymorphism: Virtual Functions – Virtual Attribute and Inheritance–Virtual Functions and Hierarchy–Pure Virtual Functions–Using Virtual Functions – Early vs. Late Binding. Run-Time Type ID and Casting Operators: RTTI – Casting Operators–Dynamic Cast.

**UNIT IV TEMPLATES AND EXCEPTION HANDLING**

**9**

Templates: Generic Functions–Applying Generic Functions–Generic Classes–Type name and Export Keywords – Power of Templates. Exception Handling: Fundamentals – Handling Derived Class Exceptions–Exception Handling Options–Understanding terminate() and unexpected()–uncaught exception()Function–Exception and bad exception Classes–Applying Exception Handling.

File I/O- fstream and the FileClasses-Opening and Closing a File-Reading and Writing Text Files- Unformatted and Binary I/O.Name spaces:Namespaces- std namespace.

**Theory: 45 periods**

### Practical Exercises

1. Implement a C++ program to print half pyramid using '\*'.
2. Write a C++ program to find the GCD (Greatest Common Divisor) of two numbers using a function.
3. Write a C++ program to check if a given number is a prime number.
4. Implement a C++ program to create a class called "simple class". Create a constructor and destructor for this class called simple class.
5. Implement a C++ program for a Copy Constructor. Create a Person class with a name and an age and create a copy constructor to create a new object with the same name and age as the source object.
6. Implement a C++ program for Overloading Functions with Different Number of Parameters for addition in a calculator
7. Implement a C++ program for Inheritance for calculating the area of a triangle.
8. Implement a C++ program that demonstrates polymorphism using a basic example of shapes.
9. Class Templates – Define a template for example stack. Define a template parameter type name T which will represent the data type that the stack will hold. Define the class methods push, pop, empty and size having their respective data types. Create two instance of the stack in the main function, one for integers and the other for double. Perform stack operations.
10. Create a max function template using template keyword. Create a template parameter using the declaration <typename T>. this template should act as placeholder for the actual type that will be used when the function is instantiated. The max function created takes two parameters of the type T and should return the maximum of two values. Create a main function. This template should be used by calling both integer and double values.
11. In this program, the try block contains the code that might potentially raise an exception. In this case, it attempts to perform a division operation and throws a std::runtime\_ error exception if the denominator is zero. The catch block catches any exception of types td::exception(or its derived classes) and displays an error message.
12. Using c++ programming perform division based on user inputs for numerator and denominator. If the user enters a denominator of 0,a std::run time\_error exception must be thrown with a custom error message. The try block must contain the code that might throw an exception, and the catch block must catch the exception and display the error message using the what() function of the exception object. Regardless of whether an exception is thrown or not, the program must continue executing after the exception handling block.
13. Implement a c++ program which includes the necessary header files: <iostream> forinput/output operations and <fstream> for file stream operations. Use an ofstream object to write data to the filenameed "output.txt". There should beacheck if the file is opened successfully. Use << operator to write data to the file, and use close() method for closing the file. Use if stream object to read data from the same file, use close() method for closing the file. The program must return 0 to indicate successful execution.

## Final Project:

- Design a program to manage a library's inventory, allowing users to add, remove, and search for books, while also keeping track of borrowed and returned books.
- Develop a system that simulates basic bank account operations like deposits, withdrawals, and balance inquiries. You could use classes to model accounts.
- Design a simple inventory management system for a small store using structs and file handling. The program should allow users to add, update, and delete items in the inventory and display the current stock

**Practical: 30 periods**

## Problem Solving Assignments

- Write a C++ program to calculate the factorial of a given positive integer using a loop.
- Implement electricity bill using C++.
- Write a C++ program to sort an array of strings in alphabetical order
- Implement a recursive function to calculate the factorial of a given number using C++
- Write a C++ program to reverse a linked list
- Design a class hierarchy for a university. Create a base class Person with attributes like name, age, and gender. Derive classes Student and Professor from the base class. Implement methods to display information about each person type. Use polymorphism to create an array of Person pointers containing both students and professors and display their information.
- Create a base class called Employee with attributes like name and salary. Derive two classes, Manager and Worker, from the base class. The Manager class should have an additional attribute for bonus, while the Worker class should have an attribute for hours worked and an hourly wage. Implement virtual methods for calculating the total earnings (salary + bonus for managers, hourly wage \* hours worked for workers). Create instances of managers and workers and display their total earnings.
- Define a custom exception class called "Negative Number Exception." Write a program that takes an integer as input. If the input is negative, throw an instance of this custom exception. Use a try-catch block to catch and handle the custom exception, displaying an error message.
- Create a program that performs a division of two integers, but this time within a loop that allows the user to keep trying until they provide valid input. Use nested
- Write a C++ program to read student records from a file and calculate their total and Percentage
- Develop a program to read employee details from a file, sort them based on salary, and write the sorted data back to the file

## Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, online resources and tutorials

## Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

- CO1** . Implement basic concepts of structures, union and pointers using C++
- CO2** . Implement function overloading and constructors using C ++
- CO3** . Implement inheritance and polymorphism using C ++
- CO4** . Implement templates and exception handling using C++
- CO5** . Implement I/O streams using C++ and develop simple applications

### YouTube Resources:

**The Chernobyl:** This channel covers a wide range of programming topics, including C++. It offers tutorials on C++ basics, advanced concepts, game development, and problem-solving techniques. The tutorials are well-explained and often include hands-on examples.

**Buckys C++ Programming Tutorials:** Run by Bucky Roberts, this channel provides a series of C++ programming tutorials suitable for beginners. The tutorials cover fundamental concepts, data structures, algorithms, and problem-solving techniques. They are presented in a clear and easy-to-follow manner.

**MyCodeSchool:** MyCodeSchool offers tutorials on various programming topics, including C++ programming and problem-solving techniques. The channel covers topics such as pointers, data structures, algorithms, and dynamic programming. The tutorials are well-structured and include examples and explanations.

**TOTAL: 75 PERIODS**

Course Code	<b>EMPLOYABILITY ENHANCEMENT SKILLS – I</b> <b>Foundations of Mathematics and Reasoning</b>	L	T	P	C
<b>ES3101</b>		0	0	2	1

### **COURSE OBJECTIVES:**

The main objectives of this course are to:

- To categorize, apply and use thought process to understand the concepts of Quantitative methods to enhance problem solving skills.
- To prepare and explain the fundamentals related to various possibilities with numeric ability and probabilities related to quantitative aptitude.
- To critically evaluate numerous possibilities related to puzzles

#### **UNIT I NUMBERS**

**6**

Introduction – Classification of numbers – Formation of Numbers (Small & Large) –Place Value – Face Value – Divisibility Rule – Prime, Composite Numbers – Prime Factorization – Number of factors – Number of factors (Odd & Even) – Sum of factors – Successors and Predecessors – Greatest Integer Value – Vedic Mathematics – Trailing Zeroes – Unit Digits–Remainder Theorem – Real Number – Rational Numbers: Integers, Fractions – Comparison of Numbers – Operations on fractions – Scientific Notation

#### **UNIT II PROBLEMS ON LETTERS, NUMBERS AND SYMBOLS**

**6**

Factors and Multiples, LCM and HCF – Relationship between LCM and HCF – Factorial – Simplification – VBODMAS – Square , Square Root – Cube, Cube Root – Exponents & Powers (Surds and Indices) – Sequence & Series: Arithmetic Progression – Geometric Progression – Special Progression, Letter Series, Number Series, Alpha – Numeric Series, Continuous Pattern Series

#### **UNIT III VERBAL AND NON – VERBAL REASONING**

**6**

Verbal Reasoning – Analogy: Completing the Analogous pair, Direct Analogy, Choosing the Analogous pair, Double Analogy, Choosing a Similar Word, Detecting Analogies, Multiple word Analogy, Number Analogy, Alphabet Analogy – Classification: Odd Words and Numerals – Coding and Decoding: Letter, Number, Symbol, Matrix, Substitution, Deciphering Message Word, Number and Symbols. Non – Verbal Reasoning Figure Series – Missing figure, Incorrect figure – Analogy: Similarity Related Pair, Similarity Related figures, unrelated figures, Group of figures.

#### **UNIT IV RATIO AND PROPORTION**

**6**

Introduction – Ratio – Proportion: Direct and Indirect – Unitary Method – Problems on Ages – Chain Rule – Partnership – Mixture or Allegation – Time and Work: Individual, Group, Efficiency, Wages – Pipes and Cistern: Inlet, Outlet, and Leakage

#### **UNIT V PERCENTAGE**

**6**

Introduction – Percentages in real life – Profit and Loss – Discount – Simple Interest – Compound Interest – Relationship between Simple Interest and Compound Interest – Overhead Expenses and GST..

### **Course Format**

Lectures and discussions, Hands-on problems solving, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

- C01.** Develop the arithmetic ability and properties of numbers that we use in day to day life,
- C02.** Demonstrate the logic behind the formation of numbers, alphabets series.
- C03.** Apply the reasoning methods logically and evaluate complex relationships between the variables and numbers.
- C04.** Use the concept of ratios and proportion in ages and partnership problems.
- C05.** Apply the short cuts of the mathematical tricks to reduce the time duration in problem solving

### Text Books:

1. Quantitative Aptitude for Competitive Examinations” by R.S. Aggarwal – 2022”
2. “Teach Yourself Quantitative Aptitude” by Arun Sharma – 2017
3. “A modern approach verbal and non – verbal reasoning” by R.S. Aggarwal – 2017

### .YouTube Resources:

**Placement Boat:** This channel provides a variety of aptitude and reasoning practice questions, including topics like quantitative aptitude, logical reasoning, and verbal reasoning. The videos are structured in a tutorial format, making it easy to follow along and understand the solutions.

**Talent Sprint:** Talent Sprint offers videos on aptitude preparation for various competitive exams, including bank exams, government job exams, and campus placements. The channel covers topics such as quantitative aptitude, reasoning, data interpretation, and puzzles.

**MATHing:** MATHing provides tutorials and practice questions for aptitude and quantitative aptitude topics. The channel covers concepts such as percentages, ratios, profit and loss, time and distance, and more, with detailed explanations for each question.

**Indiabix:** Indiabix is a popular website for aptitude and reasoning practice, and they also have a YouTube channel where they provide video solutions for their practice questions. The channel covers a wide range of topics, including numerical aptitude, logical reasoning, and data interpretation.

**Online Mentors:** Online Mentors offers aptitude preparation videos for various competitive exams, including CAT, GRE, GMAT, and campus placements. The channel covers topics such as number series, algebra, geometry, and logical reasoning, with detailed explanations and shortcuts.

**TOTAL:30 PERIODS**

## Semester II

Course Code	<b>PROBABILITY AND STATISTICS</b>	L	T	P	C
<b>MA3201</b>		3	1	0	4

### **COURSE OBJECTIVES:**

The main objectives of this course are to:

- To introduce the basic concepts of probability and random variables.
- To introduce the basic concepts of two dimensional random variables.
- To acquire the knowledge of testing of hypothesis for small and large samples this plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture?
- To apply the statistical tools in engineering problems and quality control.

### **Course Description**

Probability and Statistics is an introductory course designed to provide students with a solid foundation in probability theory and statistical analysis.

### **Prerequisites**

Basic algebra skills and familiarity with mathematical notation

### **UNIT I ONE DIMENSIONAL RANDOM VARIABLES 12**

Probability –Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

### **UNIT II TWO DIMENSIONAL RANDOM VARIABLES 12**

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Transformation of random variables – Central limit theorem (excluding proof).

### **UNIT III TESTING OF HYPOTHESIS 12**

Sampling distributions – Estimation of parameters – Statistical hypothesis – Large sample tests based on Normal distribution for single mean and difference of means – Tests based on t, Chi - square and F distributions for mean, variance – Contingency table (test for independent) – Goodness of fit.

### **UNIT IV DESIGN OF EXPERIMENTS 12**

One way and two way classifications – Completely randomized design – Randomized block design – Latin square design.

### **UNIT V STATISTICAL QUALITY CONTROL 12**

Control charts for measurements (X and R charts) – Control charts for attributes (p, c and np charts) – Tolerance limits – Acceptance sampling.

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

**CO1.** Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.

**CO2.** Understand the basic concepts of two dimensional random variables and apply in engineering applications.

**CO3.** Apply the concept of testing of hypothesis for small and large samples in real life problems.

**CO4.** Apply the basic concepts of classifications of design of experiments in the field of agriculture.

**CO5.** Develop skills to analyze quality related data using advanced statistical methods.

## Text Books:

1. Johnson, R.A., Miller, I and Freund J., "Miller and Freund's Probability and Statistics for Engineers", Pearson Education, Asia, 8th Edition, 2015.
2. Milton. J. S. and Arnold. J.C., "Introduction to Probability and Statistics", Tata McGraw Hill, 4th Edition, 2007.
3. Walpole. R.E., Myers. R.H., Myers. S.L. and Ye. K., "Probability and Statistics for Engineers and Scientists", Pearson Education, Asia, 8th Edition, 2007.

## References:

1. Devore. J.L., "Probability and Statistics for Engineering and the Sciences", Cengage Learning, New Delhi, 8th Edition, 2014.

5. Gupta S.C. and Kapoor V.K., "Fundamentals of Mathematical Statistics", Sultan Chand & Sons, New Delhi, 12<sup>th</sup> Edition, 2020.

## YouTube Resources:

**Jhan Academy:** Khan Academy's Statistics and Probability playlist covers a wide range of topics, from basic probability concepts to advanced statistical analysis. The videos are well-explained and suitable for beginners.

**StatQuest** with Josh Starmer: StatQuest offers concise and informative videos on various statistical concepts and techniques. The channel covers topics such as hypothesis testing, regression analysis, and probability distributions, with visualizations to aid understanding.

**Professor Leonard:** Professor Leonard provides comprehensive lectures on mathematics and statistics topics, including probability theory and statistical analysis. The videos are detailed and cover both theory and practical applications.

**jbstatistics:** jbstatistics offers tutorials on statistics concepts, techniques, and software tools like R and SPSS. The channel covers topics such as probability, hypothesis testing, regression analysis, and more, with clear explanations and examples.

**Dr Nic's Maths and Stats:** Dr Nic's Maths and Stats provides tutorials on probability and statistics topics, including probability distributions, confidence intervals, and hypothesis testing. The videos are aimed at undergraduate students and cover core concepts in depth.

**Ben Lambert:** Ben Lambert offers tutorials on statistics and econometrics topics, including probability theory, regression analysis, and time series analysis. The channel covers both theoretical concepts and practical applications using statistical software.

**Brian Veitch:** Brian Veitch provides tutorials on statistics topics, including probability theory, sampling distributions, and hypothesis testing. The videos are designed to supplement university-level statistics courses and cover key concepts in detail.

**The Organic Chemistry Tutor:** While primarily focused on chemistry, The Organic Chemistry Tutor also offers tutorials on mathematics and statistics topics. The channel covers probability, statistics, and calculus concepts, with clear explanations and example problems.

**60 PERIODS**

**TOTAL:60 PERIODS**

Course Code	<b>TAMILS AND TECHNOLOGY</b>	L	T	P	C
<b>HS3201</b>		1	0	0	1

### **COURSE OBJECTIVES:**

The main objectives of this course are to:

- To understand the Tamil contribution towards Weaving and ceramic technology
- To explore the design and construction technology of Tamils
- To examine the Manufacturing technology of Tamils
- To critically analyse the agriculture and irrigation technology of Tamils
- To explore the scientific Tamil & Tamil computing

### **. Course Description**

.This course aims to delve into the rich history and contributions of Tamils to various fields of technology. Students will explore ancient Tamil civilization's advancements in fields such as architecture, irrigation, metallurgy, and literature, as well as modern Tamil Nadu's contributions to science and technology.

### **Prerequisites**

Genuine interest in Tamil culture and Technology

### **UNIT I WEAVING AND CERAMIC TECHNOLOGY 3**

Weaving Industry during Sangam Age – Ceramic technology – Black and Red Ware Potteries (BRW) – Graffiti on Potteries.

### **UNIT II DESIGN AND CONSTRUCTION TECHNOLOGY 3**

Designing and Structural construction House & Designs in household materials during Sangam Age – Building materials and Hero stones of Sangam age – Details of Stage Constructions in Silappathikaram – Sculptures and Temples of Mamallapuram – Great Temples of Cholas and other worship places – Temples of Nayaka Period – Type study (Madurai Meenakshi Temple) – Thirumalai Nayakar Mahal – Chetti Nadu Houses, Indo – Saracenic architecture at Madras during British Period.

### **UNIT III MANUFACTURING TECHNOLOGY 3**

Art of Ship Building – Metallurgical studies – Iron industry – Iron smelting, steel – Copper and gold Coins as source of history – Minting of Coins – Beads making – industries Stone beads – Glass beads – Terracotta beads – Shell beads/ bone beads – Archeological evidences – Gem stone types described in Silappathikaram.

### **UNIT IV AGRICULTURE AND IRRIGATION TECHNOLOGY 3**

Dam, Tank, ponds, Sluice, Significance of Kumizhi Thoempu of Chola Period, Animal Husbandry – Wells designed for cattle use – Agriculture and Agro Processing – Knowledge of Sea – Fisheries – Pearl – Conche diving – Ancient Knowledge of Ocean – Knowledge Specific Society.

## **UNIT V SCIENTIFIC TAMIL & TAMIL COMPUTING**

**3**

Development of Scientific Tamil – Tamil computing – Digitalization of Tamil Books – Development of Tamil Software – Tamil Virtual Academy – Tamil Digital Library – Online Tamil Dictionaries – Sorkuvai Project.

### **COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

**CO1.** Understand the Weaving and ceramic technology of Tamils

**CO2.** Understand the basic concepts of design and construction technology of Tamils

**CO3.** Apply the skills of Tamil in Manufacturing technology

**CO4.** Apply the basic concepts of Tamil's design of experiments in the field of agriculture and irrigation technology.

**CO5.** Explore the skills related to scientific Tamil & tamil computing

### **TEXT – CUM – REFERENCE BOOKS**

1. Social Life of Tamils (Dr.K.K.Pillay) A joint publication of TNTB & ESC and RMRL – (in print)
2. Social Life of the Tamils – The Classical Period (Dr.S.Singaravelu) (Published by: International Institute of Tamil Studies.
3. Historical Heritage of the Tamils ( Dr.S.V.Subatamanian, Dr.K.D. Thirunavukkarasu) (Published by: International Institute of Tamil Studies).
4. The Contributions of the Tamils to Indian Culture (Dr.M.Valarmathi) (Published by: International Institute of Tamil Studies.)
5. Keeladi – ‘Sangam City Civilization on the banks of river Vaigai’ (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
6. Studies in the History of India with Special Reference to Tamil Nadu (Dr.K.K.Pillay) (Published by: The Author)
7. Porunai Civilization (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
8. Journey of Civilization Indus to Vaigai (R.Balakrishnan) (Published by: RMRL) – Reference Book.

**TOTAL: 15 PERIODS**

Course Code	<b>COMMUNICATIVE ENGLISH –II</b>	L	T	P	C
<b>HS3202</b>		3	0	2	4

## **COURSE OBJECTIVES**

- To engage learners in meaningful language activities to improve their LSRW skills
- To enhance learners awareness of general rules of writing for specific audiences
- To help learners understand the purpose, audience, contexts of different types of writing
- To develop analytical thinking skills for problem solving in communicative contexts
- To cultivate the learners to understand job applications and interviews for internship and placements.

### **Course Description**

Communicative English II is a continuation of COMMUNICATIVE ENGLISH –I aimed at enhancing students' proficiency in English language communication skills. Building upon the skills developed in Communicative English I, this course focuses on further refining students' abilities in speaking, listening, reading, and writing in English..

### **Prerequisites**

COMMUNICATIVE ENGLISH –I

### **UNIT I MAKING COMPARISONS**

**9**

Listening – Evaluative Listening: Advertisements, Product Descriptions, – Audio/ video, Speaking– Marketing a product, Persuasive SpESh Techniques. Reading – Reading advertisements, user manuals, brochures Writing – Letter to the editor; Compare and Contrast Essay Grammar – Impersonal passive voice; Prepositional phrases Vocabulary –Contextual meaning of words

### **UNIT II EXPRESSING CASUAL RELATIONS IN SPEAKING AND WRITING**

**9**

Listening – Listening to longer technical talks and completing–gap filling exercises. Listening technical information from podcasts Speaking –Describing and discussing the reasons of accidents or disasters based on news reports Reading – Reading longer technical texts/Novels , Writing – Writing responses to complaints; Problem solution Essay Grammar –Subject – Verb Agreement, Infinitive and Gerunds Vocabulary – Adverbs.

### **UNIT III PROBLEM SOLVING**

**9**

Listening– Watching movie scenes/documentaries depicting a technical problem and suggesting solutions. Speaking – Group Discussion (based on case studies), – techniques and Strategies., Reading – Case Studies, excerpts from literary texts, news reports etc. Writing – Checklists, Argumentative Essay Grammar –Error correction; If conditional sentences Vocabulary – Compound Words, Sentence Completion.

### **UNIT IV REPORTING OF EVENTS AND RESEARCH**

**9**

Listening – Listening Comprehension based on news reports and documentaries. Speaking – Interviewing, Presenting an oral report, Mini presentations on select topics Reading –Newspaper articles Writing –Industrial visit Report, Accident Report, Survey Report Grammar–Reported SpESh, Modals Vocabulary–Conjunctions, use of prepositions.

## UNIT V THE ABILITY TO PUT IDEAS OR INFORMATION COGENTLY

9

Listening – Listening to TED Talks, Presentations, Formal job interviews Speaking – Mock Interview, Making presentations with visual aids Reading – Company profiles, Statement of Purpose, (SOP), an excerpt of interview with professionals Writing –Job / Internship application – Cover letter with Resume Grammar – Numerical adjectives, Relative Clauses Vocabulary–Idioms.

**THEORY: 45 PERIODS**

### List of Exercises:

1. Listening /Reading Comprehension
2. Introducing Oneself
3. Summary of a Podcast
4. Mini Presentation on General topic (ICT tools)
5. Autobiography of a famous Personality
6. Narrating an unforgettable event
7. Drafting an Email (printed format)
8. Developing a story using given Vocabulary
9. Group Discussion
10. Mock Interview

**PRACTICAL: 30 PERIODS**

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES

Upon completion of the course, the students will be able to:

- CO1.** Compare and contrast products and ideas in technical texts.
- CO2.** Identify cause and effects in events, industrial processes through technical texts
- CO3.** Analyse problems in order to arrive at feasible solutions and communicate them orally and in the written format.
- CO4.** Report events and the processes of technical and industrial nature.
- CO5.** Present their opinions in a planned and logical manner, and draft effective resumes in context of job search.

### TEXT BOOKS

1. English for Engineers & Technologists (2020edition) Orient Blacks wan Private Ltd. Department of English, Anna University.
2. English for Science & Technology Cambridge University Press 2021. Authored by Dr. Veena Selvam, Dr. Sujatha Priyadarshini, Dr. Deepa Mary Francis, Dr. KN. Shoba, and Dr. Lourdes Joevani, Department of English, Anna University.
3. Professional English-II, V.K.Publications, Dr.S.N. Mahalakshmi.

## You Tube Resources

**EnglishLessons4U:** EnglishLessons4U offers a wide range of English language lessons covering speaking, listening, reading, writing, grammar, and vocabulary. The channel provides practical tips, exercises, and explanations to improve communicative English skills.

**Learn English with Let's Talk - Free English Lessons:** Let's Talk offers interactive English lessons focusing on speaking and communication skills. The channel covers topics such as pronunciation, fluency, idiomatic expressions, and conversational English, with engaging tutorials and practice exercises.

**BBC Learning English:** BBC Learning English provides a variety of resources for English language learners, including videos, audio lessons, quizzes, and articles. The channel covers all aspects of English language learning, including communication skills, grammar, vocabulary, and pronunciation.

**EnglishClass101:** EnglishClass101 offers lessons for learners at different levels, from beginners to advanced speakers. The channel covers topics such as grammar, vocabulary, pronunciation, and cultural insights, with lessons tailored to specific language learning goals.

**English with Lucy:** English with Lucy offers practical tips and advice for improving English language skills, with a focus on speaking, pronunciation, and confidence-building. The channel provides lessons on common English mistakes, British accents, and language learning strategies.

**Speak English With Misterduncan:** Misterduncan provides entertaining and informative English lessons covering a variety of topics, including grammar, vocabulary, idioms, and cultural aspects of the English language. The channel's videos are engaging and suitable for learners of

**TOTAL: 75 PERIODS**

Course Code	<b>DIGITAL SYSTEM DESIGN</b>	L	T	P	C
<b>AM3201</b>		3	0	2	4

**COURSE OBJECTIVES:**

- To present the fundamentals of digital circuits and simplification methods
- To practice the design of various combinational digital circuits using logic gates
- To bring out the analysis and design procedures for synchronous and asynchronous
- Sequential circuits
- To learn integrated circuit families.
- To introduce semiconductor memories and related technology

**Course Description**

Digital System Design is a comprehensive course focused on the principles, methods, and techniques used in designing digital systems..

**Prerequisites**

- Basic Mathematics skills
- Basic Electronics Knowledge
- Basic Programing Skills

**UNIT I BASIC CONCEPTS**

**9**

Review of number systems-representation-conversions, Review of Boolean algebra- theorems, sum of product and product of sum simplification, canonical forms min term and max term, Simplification of Boolean expressions-Karnaugh map, completely and incompletely specified functions, Implementation of Boolean expressions using universal gates, Tabulation methods.

**UNIT II COMBINATIONAL LOGIC CIRCUITS**

**9**

Problem formulation and design of combinational circuits - Code-Converters, Half and Full Adders, Binary Parallel Adder – Carry look ahead Adder, BCD Adder, Magnitude Comparator, Decoder, Encoder, Priority Encoder, Mux/Demux, Case study: Digital trans-receiver / 8 bit Arithmetic and logic unit, Parity Generator/Checker, Seven Segment display decoder

**UNIT III SYNCHRONOUS SEQUENTIAL CIRCUITS**

**9**

Latches, Flip flops – SR, JK, T, D, Master/Slave FF, Triggering of FF, Analysis and design of clocked sequential circuits – Design - Moore/Mealy models, state minimization, state assignment, lock - out condition circuit implementation - Counters, Ripple Counters, Ring Counters, Shift registers, Universal Shift Register. Model Development: Designing of rolling display/real time clock

**UNIT IV ASYNCHRONOUS SEQUENTIAL CIRCUITS**

**9**

Stable and Unstable states, output specifications, cycles and races, state reduction, race free assignments, Hazards, Essential Hazards, Fundamental and Pulse mode sequential circuits, Design of Hazard free circuits.

**UNIT V LOGIC FAMILIES AND PROGRAMMABLE LOGIC DEVICES**

**9**

Logic families- Propagation Delay, Fan - In and Fan - Out - Noise Margin - RTL ,TTL,ECL, CMOS - Comparison of Logic families - Implementation of combinational logic/sequential logic design using standard ICs, PROM, PLA and PAL, basic memory, static ROM,PROM,EPRM,EEPROM EAPROM.

**Theory: 45 PERIODS**

## **PRACTICAL EXERCISES:**

1. Design of adders and subtractors & code converters.
2. Design of Multiplexers & Demultiplexers.
3. Design of Encoders and Decoders.
4. Design of Magnitude Comparators
5. Design and implementation of counters using flip-flops
6. Design and implementation of shift registers.

**Practical: 30 PERIODS**

## **Course Format**

Lectures and discussions, Hands-on training and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## **COURSE OUTCOMES:**

**OUTCOMES:** Upon completion of the course, the students will be able to:

**CO1:** Use Boolean algebra and simplification procedures relevant to digital logic.

**CO2:** Design various combinational digital circuits using logic gates.

**CO3 :** Analyze and design synchronous sequential circuits.

**CO 4 :** Analyze and design asynchronous sequential circuits. .

**CO 5:**Build logic gates and use programmable devices

## **TEXTBOOKS:**

1. M. Morris Mano and Michael D. Ciletti, 'Digital Design', Pearson, 5th Edition, 2013.(Unit - I-V)

## **REFERENCES:**

1. Charles H. Roth, Jr, 'Fundamentals of Logic Design', Jaico Books, 4th Edition, 2002.

3. Floyd T.L., "Digital Fundamentals", Charles E. Merrill publishing company,1982.
4. John. F. Wakerly, "Digital Design Principles and Practices", Pearson Education, 4 th Edition, 2007.

## **You tube Resources**

**Neso Academy:** This channel covers a wide range of topics related to electronics and digital systems, including digital logic design, sequential circuits, and more.

**AllAboutEE:** This channel provides tutorials and explanations on electronics and electrical engineering topics, including digital systems and logic gates.

**Dr. T. S. Natarajan:** Dr. Natarajan covers digital electronics and microprocessor-related topics. His lectures are comprehensive and suitable for beginners as well as advanced learners.

**NPTEL - National Programme on Technology Enhanced Learning:** NPTEL offers courses by professors from premier Indian institutes. They have several courses on digital electronics and computer architecture.

**TOTAL: 75 PERIODS**

Course Code	<b>DATA STRUCTURES USIG C++</b>	L	T	P	C
<b>AM3202</b>		3	0	2	4

**COURSE OBJECTIVES:**

- To learn concepts of linear data structures like arrays and linked lists.
- To grasp the concept of stacks and queues as a linear data structure and the operations upon them.
- To explore concepts of hierarchical Tree data structures.
- To explore optimization strategies for indexing structures and graph algorithms.
- To understand the concept of searching for quick data retrieval, sorting for arranging data, hash functions strategies for optimized data storage.

**Course Description**

This course introduces students to the fundamental concepts of data structures and algorithms using the C++ programming language. The course aims to provide a solid understanding of various data structures and algorithms essential for efficient program design and problem-solving in software development

**.Prerequisites**

- Basic knowledge of programming concepts, preferably in C++.
- Understanding of fundamental algorithms and problem-solving techniques.
- Familiarity with basic mathematical concepts like sets, functions, etc.

**UNIT I LISTS 9**

Abstract Data Types (ADTs) – List ADT – Array-based implementation – Linked list implementation – Singly linked lists – Circularly linked lists – Doubly-linked lists – Applications of lists – Polynomial ADT – Radix Sort – Multilists.

**UNIT II STACKS AND QUEUES 9**

Stack ADT – Operations – Applications – Balancing Symbols – Evaluating arithmetic expressions- Infix to Postfix conversion – Function Calls – Queue ADT – Operations – Circular Queue – DeQueue – Applications of Queues.

**UNIT III TREES 9**

Tree ADT – Tree Traversals – Binary Tree ADT – Expression trees – Binary Search Tree ADT – AVL Trees – Splay trees- Red Black Tree -Priority Queue (Heaps) – BinaryHeap.

**UNIT IV INDEXING AND GRAPHS 9**

Indexing-B-Tree – B+ Tree. Graph Definition – Representation of Graphs – Types of Graphs – Breadth-first traversal – Depth-first traversal – Bi-connectivity – Euler circuits – Topological Sort – Dijkstra’s algorithm – Minimum Spanning Tree – Prim’s algorithm – Kruskal’s algorithm.

**UNIT V SEARCHING, SORTING AND HASHING TECHNIQUES 9**

Searching – Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertionsort – Shell sort – Merge Sort – Quick Sort. Hashing – Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.

**Theory: 45 periods**

### Practical Exercises:

1. Write a C++ programs to implement single linked list ADT to perform following operations.
  - a. insert an element into a list.
  - b. delete an element from list.
  - c. search for a key element in list.
  - d. count number of nodes in list.
2. Write a C++ programs to implement doubly linked list ADT to perform following operations.
  - a. insert an element into a list at the end.
  - b. delete middle element from list.
  - c. print the element in reverse order.
3. Write a C++ programs to Perform Polynomial Addition using singly linked list.
4. Write a C++ programs to implement a stack operations push, pop, top, and isEmpty using a linked list.
5. Write a C++ programs to implement a queue operations enqueue, dequeue, front, isEmpty using a linked list.
6. Write C++ programs to Convert Infix to Postfix Expression using Stack ADT.
7. Convert the following infix expression into postfix form  $(A + B) * (C + B) * (E|F)$ .
8. Write a C++ program to check if a given expression with parentheses is balanced using a stack.
9. Write C++ programs to implement a Deque(double ended queue) operations pushFront(), pushBack(), popFront(), popBack(), front(), back(), and isEmpty() using a doubly linked list.
10. Write a C++ program that demonstrates B-Tree operation -insertion, search, and display.
11. Write a C++ program for Dijkstra's single source shortest path algorithm.
12. Write a C++ program for Prim's Minimum Spanning Tree (MST) algorithm.
13. Write a C++ programs to implement binary search using a recursive function.
14. Write a C++ program to implement the Insertion Sort algorithm.
15. Write a C++ program to implement the separate chaining technique in hashing.

**Practical's: 30 periods**

### Problems-solving Assignments:

1. Using classes, design an online address book to keep track of the names, addresses, phone numbers, and dates of birth of family members, close friends, and certain business associates. Your program should be able to handle a maximum of 500 entries. Using linked lists, do the program to handle as many entries as required. Add the following operations:
  - a. Add or delete a new entry to the address book.
  - b. When the program terminates, write the data in the address book to a disk.
2. Assume that a singly linked list is implemented with a header node, but no tail node, and that it maintains only a pointer to the header node. Write a class that includes methods to
  - a. return the size of the linked list
  - b. print the linked list
  - c. test if a value x is contained in the linked list
  - d. add a value x if it is not already contained in the linked list
  - e. remove a value x if it is contained in the linked list
3. Convert the following infix expression into postfix form  $(A + B) * (C + B) * (E|F)$ .
4. Write a C++ program to implementation the insertion operation for a Red-Black Tree.
5. Write a C++ program a Max-Heap data structure operations insert(), extractMax(), and getMax().
6. Write a C++ program that demonstrates Breadth-First Traversal (BFS) in a graph using an adjacency list representation.
7. Write a C++ program that demonstrates topological sorting using Depth-First Search(DFS) on a directed acyclic graph.

8. Write a C++ program that demonstrates Kruskal's algorithm for finding the MinimumSpanning Tree (MST) of a graph.
9. Write a C++ program to implement the linear search algorithm using a non-recursive approach.
10. Write a C++ program to implement the Quick Sort algorithm.
11. Write a C++ program to implement a hash table with rehashing.

**Practical :30 PERIODS**

### **Course Format**

Lectures and discussions, Hands-on training and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

- CO1;** Implement linear data structures and legal operations permitted on them.
- CO2:**Implement stack and queue using array and linked list.
- CO3:**Use tree data structures and operations permitted on them using C program.
- CO4:**Apply the indexing and graph concepts and applications to solve different problems.
- CO5:**Apply a suitable algorithm for searching, sorting and hashing.

### **TEXT BOOKS**

1. Yashavant Kanetkar, "Data Structures Through C++", 3rd Edition, BPB Publications,2019.
2. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C++", 3rd Edition,Addison Wesley Publishing Company, 2006.

3. Sahni Horowitz , "Fundamentals of Data Structures in C++", 2nd Edition,Universities Press, 2008.

### **You Tube Resources**

**Neso Academy:** This channel covers a wide range of topics related to electronics and digital systems, MyCodeSchool: This channel provides clear and concise tutorials on data structures and algorithms, including their implementation in C++.

**Back To Back SWE:** This channel offers tutorials on coding interview questions, including various data structures and algorithms. The explanations are geared towards competitive programming and coding interviews.

**Code Library:** This channel provides tutorials on various programming topics, including data structures and algorithms in C++. The explanations are clear and well-structured.

**TOTAL: 75 PERIODS**

Course Code	<b>DATABASE MANAGEMENT SYSTEMS</b>	L	T	P	C
<b>AM3203</b>		3	0	2	4

**COURSE OBJECTIVES:**

- To learn the fundamentals of data models and to represent a database system using ER diagrams.
- To study SQL queries and database programming.
- To learn the techniques of normalization and functional dependencies.
- To understand the fundamental concepts of transaction processing- concurrency control techniques and recovery procedures.
- To have an introductory knowledge about the Storage and Query processing Techniques.

**Course Description**

Database Management Systems (DBMS) typically covers the theory, design, implementation, and management of database systems.

**.Prerequisites**

- Basic understanding of programming and data structures
- Familiarity with concepts in discrete mathematics and relational algebra

**UNIT I INTRODUCTION 9**

Purpose of Database System – Views of data – Data Models – Database Languages -- Database System Architecture – Database users and Administrator – Entity Relationship model (E-R model ) – E-R Diagrams – ER Design Issues-Extended E-R features.

**UNIT II RELATIONAL MODEL 9**

Relational Algebra, Domain Relational Calculus, Tuple Relational Calculus, DDL Commands - Create, Drop, Alter, Truncate, Rename, Keys - primary Key, Foreign Key, DML Commands - Select, Insert, Update, Delete, Any, All, In, Exists, Non Exists, Union, Intersection, DCL Commands - Grant, Revoke, TCL Commands –Commit, Rollback, Savepoint, Subqueries - nested, correlated, Joins- Inner, Outer, and Equi, Functions - SUM, COUNT, AVG,MIN,MAX, Clauses - Group By, Having By, Embedded SQL, Dynamic SQL- Creation and Dropping of Views, Creation and Execution of Stored Procedures Cursors and Triggers -Opening, Fetching and Closing, Creation , Insertion, Deletion and Updating.

**UNIT III RELATIONAL DATABASE DESIGN 9**

Functional Dependencies – Non-loss Decomposition – Functional Dependencies – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form- Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and FifthNormal Form.

**UNIT IV TRANSACTIONS 9**

Transaction Concepts - Transaction Recovery – ACID Properties – System Recovery – Media Recovery – Two Phase Commit - Save Points – SQL Facilities for recovery – Concurrency – Need for Concurrency – Locking Protocols – Two Phase Locking – Intent Locking – Deadlock-Serializability – Recovery Isolation Levels – SQL Facilities for Concurrency.

Overview of Physical Storage Media – Magnetic Disks – RAID – Tertiary storage – File Organization – Organization of Records in Files - B+ tree Index Files – Static Hashing – Dynamic Hashing –Query Processing Overview – Catalog Information for Cost Estimation – Selection Operation – Sorting – Join Operation – Database Tuning.

**Theory: 45 Periods**

**Practical Exercises:**

1. EMPLOYEE TABLE with CHECK CONSTRAINT for CITY:employee  
(empid, empname, st, city, phone, pin)

WORKTABLE with DEFAULT CONSTRAINT for COMPANYNAME:

worktable (empid, companyname, salary) COMPANY  
TABLE: - company(companyname, city)  
MANAGER TABLE: - manager(empid, managername)

USE REFERENCE INTEGRITY for WORKTABLE and EMPLOYEE tables.

Write the SQL Queries for the following

- a. Find name, city, phone, pin of the resident of all employees who work for TCS
- b. Find all employee names who don't work for TCS
- c. Find all employees who lives in particular city.
- d. Find the employee who got highest salary company wise.
- e. Find the employee id whose salary is greater than 1 lakh.

2. Sales Information System

A database is being constructed for storing sales information system. A product can be described with a unique product number, product name, price, manufacturer name. The product can sale to a particular client and each client have it own unique client number, client name, client addresses, city, pin code, state and total balance to be required to paid. Each client order to buy product from the salesman. In the order, it has unique sales order number, sales order date, client number, salesman number (unique), billed whole payment by the party or not and its delivery date.

The salesman have the name, addresses, city, pin code, state, salary of the sales man, delivery date, total quantity ordered, product rate.

**Write the SQL queries for the following –**

- a. Rename the column product\_price of product relation to new\_product\_rate.
  - b. Display the order number and date on which the clients placed their order.
  - c. Delete all the records having delivery date before 14th October 2015.
  - d. Find the sum of products based on manufacturer wise.
  - e. List of all orders that were canceled.
1. EMPLOYEE TABLE with CHECK CONSTRAINT for CITY:employee  
(empid, empname, st, city, phone, pin)  
WORKTABLE with DEFAULT CONSTRAINT for COMPANYNAME:

worktable (empid, companyname, salary) COMPANY  
TABLE: - company(companyname, city)  
MANAGER TABLE: - manager(empid, managername)

USE REFERENCE INTEGRITY for WORKTABLE and EMPLOYEE tables.

Write the SQL Queries for the following

- a. Find name, city, phone, pin of the resident of all employees who work for TCS
- b. Find all employee names who don't work for TCS
- c. Find all employees who lives in particular city.
- d. Find the employee who got highest salary company wise.
- e. Find the employee id whose salary is greater than 1 lakh.

## 2. Sales Information System

A database is being constructed for storing sales information system. A product can be described with a unique product number, product name, price, manufacturer name. The product can sale to a particular client and each client have it own unique client number, client name, client addresses, city, pin code, state and total balance to be required to paid. Each client order to buy product from the salesman. In the order, it has unique sales order number, sales order date, client number, salesman number (unique), billed whole payment by the party or not and its delivery date.

The salesman have the name, addresses, city, pin code, state, salary of the sales man, delivery date, total quantity ordered, product rate.

**Write the SQL queries for the following –**

- a. Rename the column product\_price of product relation to new\_product\_rate.
- b. Display the order number and date on which the clients placed their order.
- c. Delete all the records having delivery date before 14th October 2015.
- d. Find the sum of products based on manufacturer wise.
- e. List of all orders that were canceled.

**Final Project (sample):**

1. Database design and implementation of Pay roll Processing.
2. Database design and implementation of Banking System.
3. Database design and implementation of Movie Ticket Booking System.
4. Database design and implementation of Hospital Management System.
5. Database design and implementation of Job Recruitment Portal.
6. Database design and implementation of Travel Agency System.

**Practical: 30 Periods**

**Problems-solving Assignments:**

1. Construct an E-R diagram for a car insurance company whose customers own one or more cars each. Each car has associated with it zero to any number of recorded accidents. Each insurance policy covers one or more cars and has one or more premium payments associated with it. Each payment is for particular period of time and has an associated due date and date when the payment was received.
2. Design and draw ER diagrams that capture the information of the following schema.

(a) University Database:

Instructor  
Course  
Offering attendance  
Student details

(b) Employment Management System:

Job department  
Salary/bonus  
Employee  
Payroll  
Qualification

3. Design a database schema for a hospital management system. The system stores information about patients, doctors, medical records, and appointments.

Patients (PatientID, FirstName, LastName, Birthdate, Address, Phone)

Doctors (DoctorID, FirstName, LastName, Specialty)

MedicalRecords (RecordID, PatientID, DoctorID, Diagnosis, Prescription) Appointments

(AppointmentID, PatientID, DoctorID, AppointmentDate)

Normalize this schema up to 2nd Normal Form (2NF) and explain the steps taken during the normalization process. Identify functional dependencies and candidate keys for each table.

4. Consider the following schedules. The actions are listed in the order they are scheduled, and prefixed with the transaction name.

S1 : T1 : R(X), T2 : R(X), T1 : W(Y), T2 : W(Y) T1 : R(Y), T2 : R(Y)

S2 : T3 : W(X), T1 : R(X), T1 : W(Y), T2 : R(Z), T2 : W(Z) T3 : R(Z)

For each of the schedules, answer the following questions:

- What is the precedence graph for the schedule?
- Is the schedule conflict-serializable? If so, what are all the conflict equivalent serial schedules?
- Is the schedule view-serializable? If so, what are all the view equivalent serial schedules?

5. Consider the following two transactions :

T1:read(A)

Read(B);

If A=0 then B=B+1;

Write(B)

T2:read(B); read(A)

If B=0 then A=A+1

Write(A)

Add lock and unlock instructions to transactions T1 and T2, so that they observe two phase locking protocol. Can the execution of these transactions result in deadlock?

6. Give an example of a scenario where two phase locking leads to deadlock. Prove that two phase locking guarantees serializability.
7. "RAID mechanism improves reliability through redundancy". Justify this statement. Also discuss the best situations to be adapted for the different levels of RAID?
8. Construct B+ tree for following data. 30, 31, 23, 32, 22, 28, 24, 29 where number of pointers that fit in one node are 5.

### Course Format

Lectures and discussions, Hands-on training and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

**CO1:** Classify the database applications based on size and complexity.

**CO2:** Implement SQL queries and database programming.

**CO3:** Normalize the database and identify the functional dependencies.

**CO4:** Implement the concept of transaction processing, concurrency control and recovery management.

**CO5:** Process queries to extract data from a database.

### TEXT BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, "Database System Concepts", Fifth Edition, Tata McGraw Hill, 2006.
2. C.J.Date, A.Kannan, S.Swamynathan, "An Introduction to Database Systems", Eighth Edition, Pearson Education, 2006.

### REFERENCES:

1. Ramez Elmasri, Shamkant B. Navathe, "Fundamentals of Database Systems", Fourth Edition, Pearson / Addison Wesley, 2007.
2. Raghu Ramakrishnan, "Database Management Systems", Third Edition, McGraw Hill, 2003.
3. S.K.Singh, "Database Systems Concepts, Design and Applications", First Edition, Pearson Education, 2006.

### You Tube Resources

**frESodeCamp.org:** This channel offers a wide range of programming and computer science topics, including database management systems. You can find introductory tutorials on SQL, database design, and other related concepts.

**Academind:** Academind covers various topics in computer science and software development. They have tutorials on database management systems, SQL, NoSQL databases, and other related topics.

**Programming with Mosh:** Mosh Hamedani provides high-quality programming tutorials, including videos on SQL and database design. His explanations are clear and concise, making complex topics easy to understand.

**Derek Banas:** Derek Banas offers tutorials on a wide range of programming and computer science topics. You can find videos on SQL, database design, and database management systems on his channel.

**The Net Ninja:** This channel covers various programming and technology topics, including databases. You can find tutorials on SQL, database design, and implementation of databases using specific technologies like MySQL and MongoDB.

**Microsoft Developer:** Microsoft Developer channel provides tutorials and resources on various Microsoft technologies, including SQL Server and Azure databases. You can find videos on database administration, development, and best practices.

**TOTAL: 75PERIODS**

Course Code	<b>JAVA PROGRAMING</b>	L	T	P	C
<b>AM3204</b>		3	0	2	4

### **COURSE OBJECTIVES:**

- To learn Object Oriented Programming concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads and generics classes
- To design and build simple Graphical User Interface

### **Course Description**

This course typically covers the fundamentals of the Java programming language, object-oriented programming concepts, and practical application development

### **.Prerequisites**

- basic understanding of programming concepts
- familiarity with object-oriented programming principles

### **UNIT I INTRODUCTION TO OOP AND JAVA FUNDAMENTALS 9**

Object Oriented Programming - Abstraction – objects and classes - Encapsulation- Inheritance - Polymorphism- OOP in Java – Characteristics of Java – The Java Environment - Java Source File Structure – Compilation Fundamental Programming Structures in Java – Defining classes in Java – constructors, methods-access specifiers - static members -Comments, Data Types, Variables, Operators, Control Flow, Arrays , Packages - JavaDoc comments.

### **UNIT II INHERITANCE AND INTERFACES 9**

Inheritance – Super classes- sub classes –Protected members – constructors in sub classes- the Object class – abstract classes and methods- final methods and classes – Interfaces – defining an interface, implementing interface, differences between classes and interfaces and extending interfaces - Object cloning -inner classes, Array Lists – Strings

### **UNIT III EXCEPTION HANDLING AND I/O 9**

Exceptions - exception hierarchy - throwing and catching exceptions - built in exceptions, creating own exception-User defined Exception. Input / Output Basics – Streams – Byte streams and Character streams – Reading and Writing Console – Reading and Writing Files

### **UNIT IV MULTITHREADING AND GENERIC PROGRAMMING 9**

Differences between multi-threading and multitasking, thread life cycle, creating threads, synchronizing threads, Inter thread communication, daemon threads, thread groups. Generic Programming – Generic classes – generic methods – Bounded Types – Restrictions and Limitations. Strings: Basic String class, methods ,String Buffer Class & StringBuilder class.

### **UNIT V COLLECTIONS FRAMEWORK & DATABASE CONNECTIVITY 9**

Collections Framework-Autoboxing -For-Each Style for Loop-Collection Interfaces-Collection Interface-List Interface-Set Interface -Sorted Set Interface-Collection Classes-Array List Class-LinkedList Class-HashSet Class-Linked Hash Set Class-Tree Set Class- Enum Set Class- Accessing a Collection via an Iterator-Using an Iterator-The For-Each Alternative to Iterators-Storing User-Defined Classes in Collections-Working with Maps-The Map Interfaces-The Map Classes- Arrays- Accessing databases using JDBC connectivity - DAO

### **Practical Exercises:**

1. Solve problems by using sequential search, binary search, and quadratic sorting algorithms(selection, insertion)

2. Develop stack and queue data structures using classes and objects.
3. Develop a java application with an Employee class with Emp\_name, Emp\_id, Address, Mail\_id, Mobile\_no as members. Inherit the classes, Programmer, Assistant Professor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club funds. Generate pay slips for the employees with their gross and net salary.
4. Write a Java Program to create an abstract class named Shape that contains two integers and an empty method named printArea(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method printArea() that prints the area of the given shape.
5. Write a JAVA program divide by zero to cause an ArithmeticException. Use try, catch, and finally blocks to throw an exception, catches the exception and provide a way to handle it. Use finally block regardless of whether an exception occurred or not.
6. Create a user defined a custom exception class named CustomException that inherits from the standard Exception class. This custom exception class has a constructor that takes a message as an argument and passes it to the superclass constructor using the super() call. Here age is the input. The custom exception is intentionally set in a way that the age has a negative value to trigger the custom exception. An appropriate error message is thrown when age is negative. The catch block catches this custom exception and prints the error message.
7. Write a Java program that creates three threads. First thread displays "Good Morning" every one second, the second thread displays "Hello" every two seconds and the third thread displays "Welcome" every three seconds
8. Create a java program for getting a list of fruits. Print the list using for loop. Add one fruit to the list. Print the new list.
9. Create a java program for getting a list of numbers. Print the list using for loop. Using map – map the words of the numbers with number like "one" to 1. Print the new list.

#### **Final Project (sample) :**

1. Create a project will include creating tasks, adding them to the list, marking them as complete, and displaying the list.
2. **Library Management System:**  
Build a system to manage books, patrons, and transactions in a library. Users can borrow, return, and search for books, while administrators can manage the catalog and user accounts.
3. **Online Shopping System:**  
Develop an e-commerce platform where users can browse products, add them to the cart, proceed to checkout, and make payments. You can also incorporate user authentication and order history
4. **Chat Application:**  
Create a real-time chat application that allows users to send messages to each other. You can implement both one-on-one and group chat functionalities using sockets or a client-server architecture.
5. **Banking System:**  
Design a simplified banking system that includes features like creating accounts, making deposits and withdrawals, transferring funds between accounts, and viewing transaction history.

**Practicals:30 Periods**

#### **Problems-solving Assignments:**

1. Write java program that inputs 5 numbers, each between 10 and 100 inclusive. As each number is read display it only if it's not a duplicate of any number already read display the complete set of unique values input after the user enters each new value
2. Create a File object representing the file has to be read. Create an input stream (e.g., FileInputStream or BufferedReader) to read data from the file. Use the methods provided by the stream to read data from the file like String line.
3. Write a java program that implements a multi-threaded application that has three threads.

First thread generates a random integer every 1 second and if the value is even, the second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of the cube of the number.

4. Develop a program to read employee details from a file, sort them based on salary, and write the sorted data back to the file
5. Create a program to use JDBC to connect to a database, execute queries, and retrieve data.
6. Create a class JDBCdemo. Use the Database connection details like url, username and password to connect to data base. Load and register the JDBC driver. Establish the connection. Create a statement. Execute a query. Process the result set. Retrieve other columns. Close resources

### **Course Format**

Lectures and discussions, Hands-on training and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

- CO1:** Develop Java programs using OOP principles
- CO2:** Develop Java programs with the concepts inheritance and interfaces
- CO3:** Build Java applications using exceptions and I/O streams
- CO4:** Develop Java applications with threads and generics classes
- CO5:** Develop interactive Java programs using swings

### **TEXT BOOKS:**

1. Herbert Schildt, "Java: The Complete Reference", 11 th Edition, McGraw Hill Education, New Delhi, 2019
2. Cay S. Horstmann, "Core Java Fundamentals", Volume 1, 11 th Edition, Prentice Hall, 2018.

### **REFERENCES:**

1. Paul Deitel Harvey Deitel, Java, How to Program, Prentice Hall; 9th edition, 2018

### **You Tube Resources**

**Programming Knowledge:** This channel offers comprehensive tutorials on Java programming, covering topics from basic syntax to advanced concepts like multithreading and GUI development.

**Cave of Programming:** The Cave of Programming provides clear and concise tutorials on Java programming concepts, along with practical examples and projects to reinforce learning.

**The Net Ninja:** This channel offers Java programming tutorials suitable for beginners as well as more experienced developers. Topics include Java basics, object-oriented programming, and JavaFX.

**Derek Banas:** Derek Banas covers a wide range of programming topics, including Java programming. His tutorials are fast-paced and cover a lot of material in a short amount of time, making them great for quick learning.

**Java Brains:**This channel offers in-depth tutorials on Java programming, including Java 8 features, Spring Framework, and Java EE concepts. It's suitable for both beginners and advanced learners.

**Telusko:** Telusko provides Java programming tutorials along with other programming languages and technologies. The tutorials are well-structured and cover a variety of topics.

**Programming with Mosh:** Mosh Hamedani offers high-quality programming tutorials, including Java programming. His tutorials are easy to follow and cover both basic and advanced concepts.

**RealToughCandy:** RealToughCandy offers Java programming tutorials focused on game development using the LibGDX framework. It's a great channel for those interested in game development with Java.

**Java Brains - Programming Tutorials:** This is a different channel from the previously mentioned Java Brains. It provides tutorials on Java programming concepts, Java EE, Spring Framework, and more.

**CodeWithChris:** CodeWithChris offers beginner-friendly Java tutorials along with tutorials on iOS development. The Java tutorials cover basic concepts and practical examples.

**TOTAL : 75PERIODS**

Course Code	<b>EMPLOYABILITY ENHANCEMENT SKILLS – II</b> <b>Exploring Mathematical Concepts and Reasoning</b>	L	T	P	C
<b>ES3201</b>		0	0	2	1

## **COURSE OBJECTIVES**

- To categorize, apply and use thought process to understand the concepts of Quantitative methods to enhance problem solving skills.
- To prepare and explain the fundamentals related to various possibilities with numeric ability and probabilities related to quantitative aptitude.
- To critically evaluate numerous possibilities related to puzzles.

### **UNIT I – TIME AND DISTANCE**

**6**

Introduction – Speed: Late / Early / Usual Time – Average Speed – Chasing – Problems on Train: Crossing Pole, Crossing Platform, Train moving in same and different direction – Boats and Streams: Upstream, Downstream – Clock – Calendar.

### **UNIT II – PROBABILITY AND STATISTICS**

**6**

Introduction – Algebra of Events – Addition theorem of Probability – Permutation and Combinations – Problems based on choosing the objects – Statistics: Range – frequency, Arithmetic Mean – Median – Mode – Variance – Standard Deviation – Measures of Dispersion – Coefficient of Variation.

### **UNIT III – ARITHMETIC AND LOGICAL REASONING**

**6**

Introduction – Mathematical Operations – Blood Relations: Direct, Indirect, coded – Problems on Cubes and Dices: Face identification – Folding and cutting Images – Counting technique of figures – Distance & Direction

### **UNIT IV – APPLIED MATHEMATICS**

**6**

Mensuration (2D&3D): Square, Rectangle, Triangle, Circle, Parallelogram, Rhombus, Trapezoid, Quadrilateral, Cube, Cuboid, Cylinder, Cone, Sphere, Miscellaneous – Trigonometry: Ratio, Identities, Heights and Distances – Algebra – Logarithm – Geometry.

### **UNIT V – VERBAL AND LOGICAL REASONING**

**6**

Introduction – Venn diagram – Syllogism – Data Sufficiency – Decision Making – Puzzle: Number Puzzle, Letter Puzzle – Ranking Test – Data Arrangement: Linear, Circular, Miscellaneous – Critical Reasoning.

### **.Course Format**

Lectures and discussions, Hands-on training, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## **COURSE OUTCOMES**

upon completion of the course, students will be able to

- CO1.** Use their logical thinking and analytical abilities to solve Quantitative aptitude questions from company specific and other competitive tests.
- CO2.** Solve questions related to Time etc. from company specific and other competitive tests.
- CO3.** Illustrate and solve puzzle related questions from specific and other competitive tests

### **TEXT BOOKS:**

1. “Quantitative Aptitude for Competitive Examinations” by R.S. Aggarwal – 2022”

2. "Teach Yourself Quantitative Aptitude" by Arun Sharma – 2017
3. "A modern approach verbal and non – verbal reasoning" by R.S. Aggarwal – 2017

#### **REFERENCES:**

1. "Shortcuts in Mathematics" by Akhilesh Khare – 2016
2. "Vedic maths for competitive exams" by Ravi Shankar – 2016
3. "Quantitative Aptitude for Competitive Examination" by Abhijit Guha – 2017

#### **YouTube Resources:**

**Placement Boat:** This channel provides a variety of aptitude and reasoning practice questions, including topics like quantitative aptitude, logical reasoning, and verbal reasoning. The videos are structured in a tutorial format, making it easy to follow along and understand the solutions.

**Talent Sprint:** Talent Sprint offers videos on aptitude preparation for various competitive exams, including bank exams, government job exams, and campus placements. The channel covers topics such as quantitative aptitude, reasoning, data interpretation, and puzzles.

**MATHing:** MATHing provides tutorials and practice questions for aptitude and quantitative aptitude topics. The channel covers concepts such as percentages, ratios, profit and loss, time and distance, and more, with detailed explanations for each question.

**Indiabix:** Indiabix is a popular website for aptitude and reasoning practice, and they also have a YouTube channel where they provide video solutions for their practice questions. The channel covers a wide range of topics, including numerical aptitude, logical reasoning, and data interpretation.

**Online Mentors:** Online Mentors offers aptitude preparation videos for various competitive exams, including CAT, GRE, GMAT, and campus placements. The channel covers topics such as number series, algebra, geometry, and logical reasoning, with detailed explanations and shortcuts.

**TOTAL: 30 PERIODS**

## Semester III

Course Code	<b>LINEAR ALGEBRA</b>	L	T	P	C
<b>MA3301</b>		3	2	0	4

### COURSE OBJECTIVES:

- To find the basis and dimension of vector space
- To obtain the matrix of linear transformation and its Eigenvalues and eigenvectors
- To find orthonormal basis of inner product space and find least square approximation
- To find Eigen values of a matrix using numerical techniques and perform matrix decomposition
- To solve QR and LU decomposition and to learn the applications of linear algebra in computer Science.

### UNIT I VECTOR SPACES 12 (9+3)

Real and Complex fields - Vector spaces over Real and Complex fields - Subspace - Linear space - Linear independence and dependence - Basis and dimension.

### UNIT II LINEAR TRANSFORMATION 12 (9+3)

Linear transformation - Rank space and null space - Rank and nullity - Dimension theorem - Matrix representation of linear transformation – Eigen values and eigenvectors of linear transformation

### UNIT- III INNER PRODUCT SPACES 12 (9+3)

Inner product and norms - Properties - Orthogonal, Ortho normal vectors - Gram Schmidt ortho normalization process - Least square approximation.

### UNIT IV EIGEN VALUE PROBLEMS AND MATRIX DECOMPOSITION 12 (9+3)

Eigen value Problems: Power method, Jacobi rotation method - Singular value decomposition - QR decomposition.

### UNIT V APPLICATIONS OF LINEAR ALGEBRA 12(9+3)

Singular value decomposition and principal component analysis - Introduction to their applications in image processing and machine learning - Coding and Decoding - Least Square solutions

**THEORY: 60 PERIODS**

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by Maths Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

After the completion of the course the student will be able to

**CO1:** Find the basis and dimension of vector space

**CO2:** Obtain the matrix of linear transformation and its Eigenvalues and eigenvectors

**CO3:** Find orthonormal basis of inner product space and find least square approximation

**CO4:** Find Eigen values of a matrix using numerical techniques and perform matrix decomposition

**CO5:** Learning the applications in Image processing, Machine learning, and Cryptography

**TEXTBOOKS:**

1. Friedberg A.H, Insel A.J. and Spence L, Linear Algebra, Prentice Hall of India, New Delhi, 2004.
2. Faires J.D. and Burden R., Numerical Methods, Brooks/Cole (Thomson Publications), New Delhi, 2002.

5. Richard Branson, Matrix Operations, Schaum's outline series, 1989
6. Bernard Kolman, David R. Hill, Introductory Linear Algebra, Pearson Educations, New Delhi, First Reprint, 2009.
7. RC Gonzalez and R E Woods, Digital Image Processing

**TOTAL: 60 PERIODS**

Course Code	<b>MODERN COMPUTER ARCHITECTURE</b>	L	T	P	C
<b>AM3301</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

### **COURSE OBJECTIVES:**

- To familiarize the basics related to computer organization and computer architecture.
- To introduce the concepts of parallel processing and multi core systems.
- To understand the memory systems of modern architecture
- To examine the how parallelism is achieved in High performance Computing
- To analyze the HPC with CUDA

### **COURSE DESCRIPTION**

This course typically delves into the design and organization of computer systems, focusing on contemporary hardware technologies and architectural principles

### **PREREQUISITES**

- Digital System Design
- Familiarity with programing skills

### **UNIT I Basics of computer organization and architecture 9**

Processor Architecture: Machine Instructions and addressing modes-ALU-data path and control unit-Instruction pipelining-Pipelining Hazards- I/O Systems: I/O Interface(interrupt and DMA mode)

### **UNIT II Concepts of parallel processing and multicore systems 9**

Introduction to parallelism and concurrency - RISC vs. CISC architectures- Shared memory Vs Distributed Memory Architecture- Parallel Programming models for Threads, processes and Tasks Thread-level parallelism (TLP) -Instruction-level parallelism (ILP)

### **Unit III Distributed Computing Systems and Concurrency 9**

Relation to Parallel Multiprocessors/multicomputer Systems, Distributed and Concurrent Programs, Message Passing vs. Shared Memory Systems, Synchronous vs. Asynchronous Executions, Design Issues and Challenges, Distributed Computing Technologies

### **UNIT IV Memory Systems in Modern Architectures 9**

Memory Hierarchy: Cache-Main memory and secondary storage-Memory hierarchy optimization for performance and energy efficiency - Cache organization and optimization techniques-Virtual memory management and page replacement algorithms-Non-volatile memory technologies and their impact on system design

### **Unit V High Performance Computing (HPC) 9**

HPC Architecture- Data Parallelism- Task parallelism- High Throughput computing – Vectorization - Multithreading techniques: simultaneous multithreading (SMT), Chip multiprocessing (CMP) CUDA programming model, Basic principles of CUDA programming, Concepts of threads and blocks, GPU and CPU data exchange

**Theory:45 periods**

## **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## **COURSE OUTCOMES:**

Upon completion of the course the student will be able to

**C01** Understand the organization of the Control unit, Arithmetic and Logical unit, Memory unit and the I/O unit

**C02** Analyze different computer architectures and their applications.

**C03** Explore modern design structures of Pipelined and Multiprocessors systems.

**C04** Explore the high performance computing architecture and its uses

**C05** Apply and Examine the HPC with CUDA

## **TEXT BOOKS:**

1. M. Morris Mano, Computer System & Architecture, Prentice Hall of India, 2002.
2. John L. Hennessy and David A Patterson, Computer Architecture-A quantitative approach, Morgan Kaufmann/ Elsevier, 4th Edition, 2007.

## **REFERENCES:**

1. William Stallings, Computer Organization and Architecture – Designing for Performance, Eighth Edition, Pearson Education, 2010.

## **You Tube Resources**

Computerphile: Computerphile covers a wide range of computer science topics, including computer architecture. They have videos that explain various concepts in modern computer architecture, such as cache memory, multicore processors, and parallel computing.

Neso Academy: Neso Academy offers tutorials on computer science and engineering topics, including computer architecture. You can find videos on CPU architecture, memory hierarchy, and other fundamental concepts.

**Total:45 periods**

Course Code	<b>DESIGN AND ANALYSIS OF ALGORITHMS</b>	L	T	P	C
<b>AM3302</b>		3	0	0	3

**COURSE OBJECTIVES:**

- Understand and apply the algorithm analysis techniques on searching and sorting algorithms
- Critically analyze the efficiency of graph algorithm.
- Understand different algorithm design techniques
- Solve programming problems using state space tree
- To understand the concepts behind NP Completeness, Approximation algorithms and randomize algorithms.

**COURSE DESCRIPTION:**

This course introduces students to fundamental concepts, techniques, and methodologies for designing and analyzing algorithms. It covers various algorithmic paradigms such as divide and conquer, dynamic programming, greedy algorithms, and graph algorithms. The course emphasizes both theoretical understanding and practical implementation of algorithms, along with their efficiency analysis in terms of time and space complexity. Topics also include algorithmic problem-solving strategies, algorithmic correctness proofs, and algorithmic paradigms for tackling real-world computational problems.

**PREREQUISITES:**

Basic knowledge of programming concepts and data structures, Understanding of mathematical concepts including algebra and discrete mathematics, Familiarity with algorithmic thinking and problem-solving techniques.

**UNIT I INTRODUCTION**

**9**

Problem Solving : Programs and Algorithms-Problem Solving Aspects-Problem Solving Techniques-Algorithm analysis: Time and space complexity - Asymptotic Notations and its properties Best case, Worst case and average case analysis- Recurrence relation: substitution method- string matching and searching: linear search, binary search and Interpolation Search, Pattern search: The naïve string-matching algorithm - Rabin-Karp algorithm - Knuth-Morris-Pratt algorithm.

**UNIT-II GREEDY TECHNIQUE**

**9**

Minimum spanning tree: Kruskal's and Prim's algorithm- Shortest path: Bellman-Ford algorithm - Dijkstra's algorithm - Floyd-Marshall algorithm - Huffman coding -Network flow: Flow networks - Ford-Fulkerson method - Matching: Maximum bipartite matching.

**UNIT-III DIVIDE-AND-CONQUER AND DYNAMIC PROGRAMMING**

**9**

Divide and Conquer methodology: Finding maximum and minimum - Merge sort - Quicksort Dynamic programming: Elements of dynamic programming—Matrix-chain multiplication-Multistage graph-Optimal Binary Search Trees- Activity-selection problem - Optimal Merge pattern - 0/1 knapsack problem

**UNIT-IV STATE SPACE SEARCH AND BACKTRACKING**

**9**

Backtracking: n-Queens problem - Hamiltonian Circuit Problem - Subset Sum Problem -Graph colouring problem Branch and Bound: Solving Puzzle problem - Assignment problem-Knapsack Problem-Travelling Salesman Problem.

**UNIT-V NP-COMPLETE AND APPROXIMATION ALGORITHM**

**9**

Tractable and intractable problems: Polynomial time algorithms-Venn diagram representation-NP-algorithms-NP-hardness and NP-completeness-Bin Packing problem- Problem reduction: TSP-3-CNF

problem. Approximation Algorithms: TSP-Randomized Algorithms: concept and application- primality testing-randomized quicksort-Finding Kth smallest number.

**Theory:45 Periods**

## **Assignment**

### **Assignment 1: Algorithm Analysis and Time Complexity**

**Title:** Asymptotic Analysis of Sorting Algorithms

**Objective:** Compare the time complexity of two sorting algorithms-Insertion Sort and Heap Sort.

#### **Steps:**

1. Provide a brief overview of Insertion Sort and Heap Sort algorithms.
2. Analyze the time complexity of each algorithm in terms of Big O notation.
3. Discuss the best-case, worst-case, and average-case scenarios for both algorithms
4. Compare the efficiency of Insertion Sort and Heap Sort based on their time complexities.
5. Discuss any trade-offs or advantages one algorithm may have over the other.

### **Assignment 2: String Matching Algorithms**

**Title:** Comparative Analysis of String Matching Algorithms

**Objective:** Analyze and compare the string matching algorithms-Naïve String Matching, Rabin-Karp, and Knuth-Morris-Pratt.

#### **Steps:**

1. Provide a brief overview of each string matching algorithm.
2. Analyze the time complexity of Naïve String Matching, Rabin-Karp, and Knuth-Morris-Pratt.
3. Discuss the best-case, worst-case, and average-case scenarios for each algorithm.
4. Compare the strengths and weaknesses of the algorithms, considering factors like pattern length and text size.
5. Provide examples or scenarios where each algorithm may be most suitable.

### **Assignment 3: Divide and Conquer and Dynamic Programming**

**Title:** Comparative Study of Divide and Conquer vs. Dynamic Programming

**Objective:** Analyze and compare the efficiency of Divide and Conquer and Dynamic Programming approaches in solving two different problems-Finding Maximum and Minimum, and Matrix-Chain Multiplication.

#### **1. Finding Maximum and Minimum:**

- Explain the Divide and Conquer approach for finding the maximum and minimum in an array.

- Analyze the time complexity of the Divide and Conquer solution.
- Discuss any limitations or scenarios where this approach might be preferable.

## 2. Matrix-Chain Multiplication:

- Describe the Dynamic Programming approach for solving the Matrix-Chain Multiplication problem.
- Analyze the time and space complexity of the Dynamic Programming solution.
- Discuss the advantages of using Dynamic Programming in this context.

## 3. Comparison:

- Compare the Divide and Conquer and Dynamic Programming approaches in terms of time and space complexity.
- Discuss scenarios where one approach might be more suitable than the other.

## Assignment 4: Greedy Technique and Dynamic Programming

**Title:** Greedy vs. Dynamic Programming in Optimization Problems

**Objective:** Analyze and compare the Greedy Technique and Dynamic Programming approaches in solving two different optimization problems -Activity-Selection and Optimal Merge Pattern.

### 1. Activity-Selection Problem:

- Explain the Greedy Strategy for solving the Activity-Selection problem.
- Analyze the time complexity of the Greedy solution.
- Discuss any potential pitfalls or limitations of the Greedy approach.

### 2. Optimal Merge Pattern:

- Describe the Dynamic Programming approach for solving the Optimal Merge Pattern problem.
- Analyze the time and space complexity of the Dynamic Programming solution.
- Discuss the advantages of using Dynamic Programming in this context.

### 3. Comparison:

- Compare the Greedy Technique and Dynamic Programming approaches in terms of their suitability for optimization problems.
- Discuss scenarios where one approach might out perform the other or where a hybrid approach could be considered.

## PRACTICAL EXERCISES:

### A. Searching and Sorting Algorithms

1. Implement Linear Search. Determine the time required to search for an element. Repeat the experiment for different values of  $n$ , the number of elements in the list to be searched and plot a graph of the time taken versus  $n$ .

2. Implement recursive Binary Search. Determine the time required to search an element. Repeat the experiment for different values of  $n$ , the number of elements in the list to be searched and plot a graph of the time taken versus  $n$ .

3. Given a text  $\text{txt}[0..n-1]$  and a pattern  $\text{pat}[0..m-1]$ , write a function  $\text{search}(\text{char pat}[], \text{char txt}[])$  that prints all occurrences of  $\text{pat}[]$  in  $\text{txt}[]$ . You may assume that  $n > m$ .

4. Sort a given set of elements using the Insertion Sort and Heap sort methods and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n.

## **B. Graph Algorithms**

1. Develop a program to implement graph traversal using Breadth First Search.

2. Develop a program to implement graph traversal using Depth First Search.

3. From a given vertex in a weighted connected graph, develop a program to find the shortest paths to other vertices using Dijkstra's algorithm.

4. Find the minimum cost spanning tree of a given undirected graph using Prim's algorithm.

5. Implement Floyd's algorithm for the ALL-Pair Shortest path problem

6. Compute the transitive closure of a given directed graph using Marshall's algorithm.

## **C. Algorithm Design Techniques**

1. Develop a program to find out the maximum and minimum numbers in a given list of n numbers using the divide and conquer technique.

2. Implement Merge sort and Quick sort methods to sort an array of elements and determine the time required to sort. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n.

## **D. State Space Search Algorithms**

1. Implement N Queens problem using Backtracking.

## **E. Approximation Algorithms Randomized Algorithms**

1. Implement any scheme to find the optimal solution for the Traveling Sales person problem and then solve the same problem instance using any approximation algorithm and determine the error in the approximation.

2. Implement randomized algorithms for finding the kth smallest number. The programs can be implemented in C/C++/JAVA/Python.

**Practicals:30 Periods**

## **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## **COURSE OUTCOMES:**

Upon completion of this course students will be able to

**C01:** Understand the fundamental principles of problem solving and analyse the efficiency of algorithms using various frameworks

**C02:** Apply Greedy Technique to solve real time problems

**C03:** Implement and evaluate various Divide and Conquer and Dynamic Programming Techniques

**C04:** Apply Backtracking techniques to solve real-world problems.

**C05:** Evaluate and Solve problems using approximation algorithms and randomized algorithms

**Total: 75 Periods**

CourseCode	<b>WEB DEVELOPMENT FRAMEWORKS AND PRACTICES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AM3303</b>		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>

**Course Objectives:**

- To understand the difference between web based and server-side programming.
- To create awareness on web technology.
- To create full stack application using java script-based frameworks.
- To develop Python based innovative full stack applications.
- To develop java applications using Spring boot and Hibernate.

**UNIT I – NODE.JS 9**

Introduction to Server-side programming – multi-tier architecture - Node.js architecture –npm  
– Development environment – API

**UNIT II – EXPRESS.JS 9**

Express JS and features – Routing – HTTP request and response – Middleware – Error Handling.

**UNIT III – PYTHON FRAMEWORKS 9**

Introduction to frameworks on Python – Flask and Django. Django: Creating web application  
– handle request and response – views and templates – Forms and generic views –SQLAlchemy.

**UNIT IV – MONGODB 9**

SQL and NoSQL concepts – Create and manage MongoDB – Migration of Data into MongoDB – MongoDB with Node.js – Services offered by MongoDB.

**UNIT V – JAVA DEVELOPMENT ENVIRONMENT 9**

Introduction to Spring Boot – Creating Project – Spring Initializer – Download and Install STS IDE – Spring Boot Example – Spring Boot CLI - Spring Boot Annotations - Spring Boot Application Properties - Spring Boot Starter Web - Spring Boot AOP

Hibernate – Hibernate Architecture - Hibernate with eclipse – Hibernate web application example – Hibernate Log4j – Hibernate Inheritance Mapping – Hibernate and Spring Integration.

.Theory:45 PERIODS

**PRACTICAL EXERCISES:**

- Project– Simple weather application
  - Project–URL shortener Application using SQL.
  - Project–Flight Ticket Booking
- Create a web application for flight ticket booking. Use any tech stack for the backend and db.
- Type of Users
- User
  - Admin
- User Use Cases
- Login
  - Sign up
  - Searching for flights based on date and time

Booking tickets on a flight based on availability (assuming the defaults at count is 60)  
My Booking-> to list out all the bookings made by that user  
Logout

Admin Use Cases  
Login(Separate login for Admin)  
Add Flights  
Remove flights  
View all the booking based on flight number and time

**Practical : 30 PERIODS**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by Industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **Course Outcomes:**

**Outcomes:** Upon completion of the course ,students will be able to:

**C01:** Represent the Web data to enable the Web elements processing.

**C02:**Develop Java Script concepts in terms of functional programming.

**C03:**Develop a Web Application using java script- based frameworks.

**C04:**Develop strong Web Applications using python.

**C05:**Develop robust Java Applications using Spring boot and hibernate.

### **TextBooks:**

**TOTAL:75PERIODS**

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- Understand Fundamental Networking Concepts
- Explore Advanced Data Link and Network Layer Technologies.
- Enhance Knowledge of Transport and Application Layer Protocols.
- Develop Proficiency in Network Security and Emerging Technologies.
- Hands-On Experience through Simulations and Experiments.

**COURSE DESCRIPTION:**

Explore the intricacies of advanced data link and network layer technologies, delve into optimization strategies for transport and application layers, and master cutting-edge concepts in network security. The hands-on experience in this course prepares students for the challenges of modern networking, including emerging technologies like blockchain and zero trust networking.

**PREREQUISITES:**

- Basics of networks, OSI model, and common networking protocols required.
- Proficiency in one language (Python), basic socket programming understanding preferred.

**UNIT I - Introduction to Networking**

**9**

Overview of Computer Networks: Definition and importance of computer networks - Historical development of networking, Layering in Network Architectures: OSI model overview - TCP/IP protocol stack - Functions and responsibilities of each layer, Switching Techniques: Packet switching basics - Circuit-switching and virtual circuit-switching concepts, Data Link Layer: Framing techniques - Error detection methods - Medium Access Control (MAC) protocols - Ethernet bridging

**UNIT II - Routing and IP Addressing**

**9**

Routing Protocols: Shortest path routing - Flooding algorithm - Distance vector routing - Link state routing, Fragmentation and IP Addressing: Basics of IP addressing - IPv4 addressing - CIDR notation - Fragmentation in network communication, IP Support Protocols: Address Resolution Protocol (ARP) - Dynamic Host Configuration Protocol (DHCP) - Internet Control Message Protocol (ICMP) - Network Address Translation (NAT)

**UNIT III - Transport Layer**

**9**

Flow Control and Congestion Control: Basics of flow control - Congestion control mechanisms, Transmission Control Protocol (TCP): TCP features and functionalities, TCP connection establishment, maintenance, and termination, User Datagram Protocol (UDP): Characteristics and usage scenarios - Comparison with TCP, Sockets: Overview of sockets in network programming

**UNIT IV - Application Layer Protocols**

**9**

Domain Name System (DNS): DNS fundamentals - DNS resolution process, Simple Mail Transfer Protocol (SMTP): Email communication basics - SMTP operation, Hypertext Transfer Protocol (HTTP): Basics of web communication, HTTP request-response model, File Transfer Protocol (FTP): FTP modes and operation, Security considerations in FTP

Network Security Technologies: Intrusion detection systems, firewalls, VPNs. Blockchain Technology in Networking: Basics of blockchain, applications in networking. Zero Trust Networking: Concepts and implementation strategies

**Theory :45 PERIODS**

**PRACTICAL EXERCISE**

Learn to use commands like tcp dump, netstat,if config, nslookup and trace route. Capture ping and trace route PDUs using a network protocol analyzer and examine.

1. Write a HTTP web client program to download a web page using TCPsockets.
2. Applications using TCP sockets like: a) Echo client and echo server b)Chat
3. Simulation of DNS using UDP sockets.
4. Use a tool like Wireshark to capture packets and examine the packets
5. Write a code simulating ARP/RARP protocols.
6. Study of Network simulator (NS) and Simulation of Congestion Control Algorithms using NS.
7. Study of TCP/UDP performance using Simulation tool.
8. Simulation of Distance Vector/Link State Routing algorithm.
9. Simulation of an error correction code(like CRC)

**TOTAL75 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:**

After the completion of the course the student will be able to

**C01:** Explain the significance of computer networks in modern computing.

**C02:** Analyze the efficiency and performance of different data link layer protocols.

**C03:** Implement advanced concepts in the network layer by configuring and troubleshooting IP routing, routing protocols (e.g., OSPF, BGP), and multicast routing.

**C04:** Analyze the performance of transport and application layer protocols, utilizing advanced congestion control algorithms and optimization techniques.

**C05:** Evaluate the implementation and effectiveness of network security technologies.

**TEXT BOOKS:**

- 1."Computer Networking: A Top-Down Approach" by James F. Kurose and Keith W. Ross, Latest edition published in 2017
- 2."Computer Networking: Principles, Protocols and Practice" by Olivier Bonaventure, First edition published in 2012 (open-access)
- 3."Computer Networks" by Andrew S. Tanenbaum and David J. Wetherall, Latest edition published in 2020.
- 4."Data Communications and Networking" by Behrouz A. Forouzan, Latest edition published in 2020

- 2.David Bombal: David Bombal's channel offers tutorials on networking, Cisco certifications, and hands-on labs.
- 3.Eli the Computer Guy: Eli the Computer Guy covers a wide range of IT and networking topics, including practical advice and troubleshooting.
- 4.Hak5: Hak5 explores technology and security, including networking topics and tools.

## **Web Sites:**

- 1.Cisco Networking Academy: Cisco Networking Academy provides online courses, interactive tools, and resources for learning about networking, including hands-on labs and simulations.
- 2.Wireshark: Wireshark is a widely used network protocol analyzer. The website offers documentation, tutorials, and resources for learning how to use Wireshark for network analysis.
- 3.IETF - Internet Engineering Task Force: IETF is the organization that develops and promotes Internet standards. The site provides access to RFCs (Request for Comments) and other documents related to networking protocols.

**TOTAL:75PERIODS**

**Course Code**  
**AM3305**

**Foundation of Data Science**

**L T P C**  
**3 0 2 4**

**COURSE OBJECTIVES:**

- To understand the data science fundamentals and process.
- To learn to describe the data for the data science process.
- To learn to describe the relationship between data.
- To utilize the Python libraries for Data Wrangling.
- To present and interpret data using visualization libraries in Python

**COURSE DESCRIPTION:**

A course on the foundations of data science typically provides students with a comprehensive understanding of the fundamental concepts, techniques, and tools used in the field of data science.

**PREREQUISITES**

- Basic understanding of mathematics (e.g., calculus, linear algebra, and probability)
- Familiarity with programming concepts

**UNIT I INTRODUCTION**

**9**

Data Science: Benefits and uses – facets of data - Data Science Process: Overview – Defining research goals – Retrieving data – Data preparation - Exploratory Data analysis – build the model– presenting findings and building applications - Data Mining - Data Warehousing – Basic Statistical descriptions of Data

**UNIT II DESCRIBING DATA**

**9**

Types of Data - Types of Variables -Describing Data with Tables and Graphs –Describing Data with Averages - Describing Variability - Normal Distributions and Standard (z) Scores

**UNIT III DESCRIBING RELATIONSHIPS**

**9**

Correlation –Scatter plots –correlation coefficient for quantitative data –computational formula for correlation coefficient – Regression –regression line –least squares regression line – Standard error of estimate – interpretation of  $r^2$  –multiple regression equations –regression towards the mean

**UNIT IV PYTHON LIBRARIES FOR DATA WRANGLING**

**9**

Basics of Numpy arrays –aggregations –computations on arrays –comparisons, masks, boolean logic – fancy indexing – structured arrays – Data manipulation with Pandas – data indexing and selection – operating on data – missing data – Hierarchical indexing – combining datasets – aggregation and grouping – pivot tables

**UNIT V DATA VISUALIZATION**

**9**

Importing Matplotlib – Line plots – Scatter plots – visualizing errors – density and contour plots – Histograms – legends – colors – subplots – text and annotation – customization – three dimensional plotting - Geographic Data with Basemap - Visualization with Seaborn.

**Theory :45 PERIODS**

**Practical Exercises**

1. Download, install and explore the features of NumPy, SciPy, Jupyter, Statsmodels and Pandas packages.
2. Working with Numpy arrays
3. Working with Pandas data frames
4. Reading data from text files, Excel and the web and exploring various commands for doing descriptive analytics on the Iris data set.
5. Use the diabetes data set from UCI and Pima Indians Diabetes data set for performing the following:
  - a. Univariate analysis: Frequency, Mean, Median, Mode, Variance, Standard Deviation, Skewness and Kurtosis.
  - b. Bivariate analysis: Linear and logistic regression modeling
  - c. Multiple Regression analysis
  - d. Also compare the results of the above analysis for the two data sets.
6. Apply and explore various plotting functions on UCI data sets.
  - a. Normal curves

- b. Density and contour plots
  - c. Correlation and scatter plots
  - d. Histograms
  - e. Three dimensional plotting
7. Visualizing Geographic Data with Basemap

**Practicals:30 Periods**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOMES:**

**OUTCOMES:** upon completion , the students will be able to:

**C01:** Define the data science process

**C02:** Understand different types of data description for data science process

**C03:** Gain knowledge on relationships between data

**C04:** Use the Python Libraries for Data Wrangling

**C05:** Apply visualization Libraries in Python to interpret and explore data

## Semester IV

<b>Course Code</b>	<b>DISCRETE MATHEMATICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>MA3401</b>		<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### **COURSE OBJECTIVES:**

- To familiarize the applications of algebraic structures
- To introduce most of the basic terminologies used in computer science courses and application of ideas to solve practical problems
- To understand the graph models and basic concepts of graphs
- To study the characterization and properties of trees and graph connectivity
- To extend student's logical and mathematical maturity and ability to deal with abstraction and understand the concepts, significance of boolean algebra which are widely used in computer science and engineering.

### **COURSE DESCRIPTION:**

Discrete Mathematics is a foundational course that introduces students to fundamental mathematical concepts essential for computer science, cryptography, and various areas of engineering. The course covers topics such as set theory, logic, combinatorics, graph theory, and algorithms. Students will learn how to apply mathematical reasoning and problem-solving techniques to analyze discrete structures and solve problems in a rigorous and systematic manner. The course emphasizes abstract thinking, formal proof techniques, and logical reasoning skills. Practical applications of discrete mathematics in computer science, cryptography, and other fields are also explored through examples and exercises.

### **PREREQUISITES:**

Proficiency in algebra, geometry, and basic mathematical operations is essential. Students should have a strong foundation in mathematical concepts such as functions, equations, and inequalities, Problem-Solving Skills, Programming Fundamentals, Logical Reasoning, Graphical Representations, Critical Thinking

### **UNIT I Algebraic Structures 12 (9+3)**

Semigroup – Monoids – Groups – Subgroups – Abelian groups – Lagrange's theorem – Rings (examples only) – Integral domain – Fields – Definition and examples.

### **UNIT II Combinatorics 12 (9+3)**

Introduction to Basic Counting Principles – Permutations and combinations ( $nPr$ ,  $nCr$ ) – Balls and Pins problems – Pigeonhole Principle – Recurrence relations – Generating Functions - Introduction to Proof Techniques – Mathematical Induction.

### **UNIT III Sets, Relations, Functions, and Basic Graph Theory 12 (9+3)**

Sets: Basic definitions and operations – Relations: Properties of relations, Equivalence relations, Partial orders and lattices – Function: Definitions, types of functions, composition, and inverse functions – Graphs & Digraphs; Definition & basic properties, Isomorphism, complement – Connectivity and Reachability: Adjacency matrix – Matching & Colouring: Basics concepts of graph matching, Chromatic number, graph colouring problem – Eulerian & Hamiltonian Paths & Circuits.

### **UNIT IV Trees and Planar Graphs 12 (9+3)**

Trees – Planar graphs, Euler's formula, dual of a planer graph – Independence number and clique number, chromatic number, statement of Four-colour theorem.

### **UNIT V Logic and Boolean Algebra 12 (9+3)**

Propositional calculus – propositions and connectives, syntax – Semantics: truth assignments and truth tables, validity and satisfiability, tautology – Adequate set of connectives – Equivalence and normal forms; Compactness and resolution – Formal reducibility: natural deduction system and axiom system – Soundness and completeness – Introduction of Boolean algebra, truth table, basic logic gate, basic postulates of Boolean algebra, principle of duality, canonical form, Karnaugh map.

### **Course Format**

Lectures, problem solving and discussions

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

C01: Have an understanding in identifying structures on many levels.

C02: Understand the concepts of combinatorics.

C03: Understand the concepts of graph theory and its applications.

C04: Understand the importance of the natural applications of trees and apply the graph coloring concepts in partitioning problems

C05: Learning logic and Boolean algebra and using these concepts to solve the problems..

**Total: 60 Periods**

<b>Course Code</b>	<b>Parallel Programing throughPython</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>	<b>COU</b>
<b>AM3401</b>		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>	<b>RSE</b>
						<b>OBJ</b>
						<b>ECT</b>

**IVES:**

- To understand the basic concepts of python for parallel Computing
- To explore Multithreading and Multiprocessing in python
- To review the distributed computing concepts in python
- To analyze the parallel computing patterns in python
- To experiment the Parallelism in Python without libraries

**COURSE DESCRIPTION:**

This course is designed to provide students with the knowledge and skills necessary to leverage Python for parallel programming, enabling them to harness the power of multicore processors, clusters, and parallel programing environments effectively.

**PREREQUESTIES:**

- Proficiency in Python programming language
- Understanding of basic computer science concepts (e.g., data structures, algorithms)
- Familiarity with fundamental concepts of parallel and concurrent programming

**Unit -I Python Basics for Parallel Computing 9**

Overview of the Python programming language- Python syntax essentials for high-performance computing- Setting up the Python environment for parallel computing- Introduction to Python's scientific computing stack (NumPy, SciPy)

**Unit II Multi-Threading and Multi-Processing in Python 9**

Understanding Python's Global Interpreter Lock (GIL)-Creating and managing threads using the threading module-Using the multiprocessing module for CPU-bound tasks-Synchronization primitives, shared memory, and managing state

**Unit III Distributed Computing in Python 9**

Introduction to distributed computing with Python- Setting up and managing worker processes with multiprocessing and concurrent futures- Using message passing with Celery for distributed tasks - Introduction to Dask for scalable analytics and parallel computing

**Unit IV Parallel Computing Patterns in Python 9**

Common parallel computing patterns: Map Reduce, scatter-gather-Implementing parallel map with concurrent futures- Parallel loops, aggregations, and reductions with Dask-Task scheduling and load balancing strategies

**Unit IV Implementation of Parallelism in Python without libraries 9**

Python's multiprocessing module- Python's threading module- Python's asyncio module- POSIX threads- extensions in C or Cython to leverage low-level parallelism features - integration of C or Cython into Python code.

**Theory: 45 Periods**

**Practical Exercises**

1. Write a Python script that calculates the square of numbers from 1 to 10 using multiprocessing.
2. Extend the script to utilize a multiprocessing pool to parallelize the task.
3. Create a Python program to download multiple images from URLs using multithreading.
4. Explore the Global Interpreter Lock (GIL) limitations and discuss how multithreading may or may not improve performance.

5. Implement parallel versions of common sorting algorithms such as merge sort or quicksort using multiprocessing.
6. Write a Python program to perform matrix multiplication using both serial and parallel approaches. Experiment with different matrix sizes and compare the performance of the parallel version with the serial version.
7. Use a library like Dask or PySpark to perform distributed computing tasks. Design a task such as distributed word counting or distributed matrix operations and execute it on a cluster.
8. Explore GPU parallelization using libraries like PyCUDA or Numba. Implement a computationally intensive task such as image processing or scientific computing using GPU parallelization and compare its performance with CPU-based implementations.

**Practical :30Periods**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOMES:**

Upon completion of this course, the students will be able to:

**C01:** Understand the basic concepts of python for parallel Computing

**C02:** Explore Multithreading and Multiprocessing in python

**C03:** Analyze the distributed computing concepts in python

**C04::**Apply e the parallel computing patterns in python

**C05:** Experiment and evaluate the Parallelism in Python without libraries

### **Text Books:**

1. "Parallel Programming with Python" by Jan Palach
2. "Python Parallel Programming Cookbook" by Giancarlo Zaccone:
- 3. References**
  1. "High Performance Python: Practical Performant Programming for Humans" by Micha Gorelick and Ian Ozsvald:
  2. "Parallel Programming: Techniques and Applications Using Networked Workstations and Parallel Computers" by Barry Wilkinson and Michael Allen:

### **You Tube Resources**

**Corey Schafer** - Corey Schafer's channel offers comprehensive tutorials on Python programming, including topics related to parallel programming. His videos cover multiprocessing, multithreading, asynchronous programming with asyncio, and practical examples of parallelism in Python.

**TOTAL: 75PERIODS**

**Course Code**

**L T P C**

**Operating Systems**

**AM3402**

**3 0 2 4**

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- To understand the basics and functions of operating systems.
- To understand processes and threads
- To analyze scheduling algorithms and process synchronization.
- To understand the concept of deadlocks.
- To analyze various memory management schemes.
- To be familiar with I/O management and file systems.
- To be familiar with the basics of virtual machines and Mobile OS like iOS and Android.

**COURSE DESCRIPTION:**

Operating Systems is a foundational course that explores the principles, components, and functionalities of modern operating systems. The course covers topics such as process management, memory management, file systems, device management, and security. Students will learn about the design and implementation of operating system components, as well as their role in providing an interface between hardware and software applications. The course also discusses key concepts such as concurrency, scheduling, virtualization, and system performance. Hands-on labs and projects provide practical experience in operating system concepts and system-level programming.

**PREREQUISITES:**

Computer Architecture, Programming Fundamentals, Operating System Concepts, Data Structures and Algorithms, Computer Networks, Software Engineering Principles.

**UNIT I INTRODUCTION**

**9**

Computer System - Elements and organization; Operating System Overview - Objectives and Functions - Evolution of Operating System; Operating System Structures – Operating System Services - User Operating System Interface - System Calls – System Programs - Design and Implementation - Structuring methods-Need of Virtual machines- OS design considerations for multiprocessor and multicore - Operating System generation - System boot.

**UNIT II PROCESS MANAGEMENT**

**9**

Processes - Process Concept - Process Scheduling - Operations on Processes - Inter-process Communication; CPU Scheduling - Scheduling criteria - Scheduling algorithms: Threads – Multi thread Models – Multi core programming- Threading issues; Process Synchronization - The Critical-Section problem - Synchronization hardware – Semaphores – Mutex - Classical problems of synchronization - Monitors; Deadlock - Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from deadlock.

### **UNIT III MEMORY MANAGEMENT**

9

Main Memory - Swapping - Contiguous Memory Allocation – Paging - Structure of the Page Table - Segmentation, Segmentation with paging; Virtual Memory - Demand Paging – Copy on Write - Page Replacement - Allocation of Frames –Thrashing.

### **UNIT IV STORAGE MANAGEMENT**

9

Mass Storage system – Disk Structure - Disk Scheduling and Management; File-System Interface - File concept - Access methods - Directory Structure - Directory organization - File system mounting - File Sharing and Protection; File System Implementation - File System Structure - Directory implementation - Allocation Methods - Free Space Management; I/O Systems – I/O Hardware, Application I/O interface, Kernel I/O subsystem.

### **UNIT V SECURITY ,VIRTUAL MACHINES AND MOBILE OS**

9

UNIX Security – UNIX Protection System – UNIX Authorization – UNIX Security Analysis – UNIX Vulnerabilities - Windows Vulnerabilities – Address Space Layout Randomizations – Retrofitting Security into a Commercial Operating System – Introduction to Security Kernels-Virtual Machines – History, Benefits and Features, Building Blocks, Types of Virtual Machines and their Implementations, Virtualization and Operating-System Components; Mobile OS - iOS and Android.

**Theory :45 PERIODS**

#### **PRACTICAL EXERCISES:**

Installation of windows operating system

1. Illustrate UNIX commands and Shell Programming
2. Process Management using System Calls : Fork, Exit, Getpid, Wait, Close
3. Write C programs to implement the various CPU Scheduling Algorithms
4. Illustrate the inter process communication strategy
5. Implement mutual exclusion by Semaphore
6. Write C programs to avoid Deadlock using Banker's Algorithm
7. Write a C program to Implement Deadlock Detection Algorithm
8. Write C program to implement Threading
9. Implement the paging Technique using C program
10. Write C programs to implement the following Memory Allocation Methods
  - a. First Fit b. Worst Fit c. Best Fit
11. Write C programs to implement the various Page Replacement Algorithms
12. Write C programs to Implement the various File Organization Techniques
13. Implement the following File Allocation Strategies using C programs a. Sequential b. Indexed c. Linked
14. Write C programs for the implementation of various disk scheduling algorithms

**Practical: 30 PERIODS**

#### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

#### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

#### **COURSE OUTCOMES:**

Upon completion of this course, the students will be able to:

1. **CO1** :Analyze various scheduling algorithms and process synchronization.

2. **CO2** : Explain deadlock prevention and avoidance algorithms.
3. **CO3** : Compare and contrast various memory management schemes.
4. **CO4** : Explain the functionality of file systems, I/O systems, and Virtualization
5. **CO5** : Compare iOS and Android Operating Systems.

#### **TEXT BOOKS:**

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, "Operating System Concepts", 10th Edition, John Wiley and Sons Inc., 2018.
2. Andrew S Tanenbaum, "Modern Operating Systems", Pearson, 5th Edition, 2022 New Delhi.

#### **REFERENCES:**

3. Achyut S.Godbole, Atul Kahate, "Operating Systems", McGraw Hill Education, 2016.

#### **You Tube Resources:**

**Operating System - TutorialsPoint:**TutorialsPoint's Operating System playlist offers a series of videos covering fundamental concepts of operating systems, including processes, memory management, file systems, and more.

**Neso Academy:** Neso Academy provides comprehensive tutorials on computer science topics, including operating systems. Their playlist covers various OS concepts such as process scheduling, memory management, file systems, and synchronization.

**Computerphile:**Computerphile offers informative videos on computer science topics, including operating systems. You can find videos on the history of operating systems, process scheduling algorithms, file systems, and more.

**Dr. Soper's Videos - UNC Charlotte:**Dr. Brian Soper from UNC Charlotte provides lectures on operating systems concepts. His videos cover topics such as process management, memory management, file systems, and virtualization.

**The Net Ninja:**The Net Ninja's playlist on operating systems covers essential OS concepts such as processes, threads, scheduling algorithms, memory management, and file systems.

**TOTAL:75 PERIODS**

<b>Course Code</b>	<b>Machine Learning: Concepts and Applications</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AM3403</b>		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>

**COURSE OBJECTIVES:**

- To understand the basic concepts of machine learning.
- To understand and build supervised learning models.
- To understand and build unsupervised learning models.
- To learn the basics of deep learning using neural networks
- To learn the basics of optimization searching and reinforcement learning methods.

**UNIT I INTRODUCTION 11**

Introduction: Introduction to Machine Learning: Introduction. Different types of learning, Hypothesis space and inductive bias, Evaluation. Training and test sets, cross validation, Concept of over fitting, under fitting, Bias and Variance. Linear Regression: Introduction, Linear regression, Simple and Multiple Linear regression, Polynomial regression, evaluating regression fit.

**UNIT II SUPERVISED LEARNING 9**

Bayesian linear regression, gradient descent, Linear Classification Models: Discriminant function – Perceptron algorithm, Probabilistic discriminative model - Logistic regression, Probabilistic generative model – Naive Bayes, Maximum margin classifier – Support vector machine, Decision Tree, Random Forests, Instance Based Learning- KNN.

**UNIT III NEURAL NETWORKS 8**

Artificial Neural Networks: Introduction, Biological motivation, ANN representation, appropriate problem for ANN learning, Perceptron, multilayer networks and the back propagation algorithm, Popular CNN Architectures, RNNs, LSTM, BERT, GANS and Generative Models

**UNIT IV UNSUPERVISED LEARNING AND OPTIMISATION 8**

Unsupervised learning: Expectation maximization - Gaussian mixture models -K-means / K medoid - hierarchal clustering-top-down, bottom-up –single linkage-multiple linkage. Dimensionality Reduction- Linear Discriminate Analysis, Principal Components Analysis, Factor Analysis, Independent Component Analysis. Optimization– Going Downhill, Least-Squares optimization, Conjugate Gradients - Exploitation and Exploration.

**UNIT V APPLICATION PROBLEMS 9**

The case studies- churn analysis and prediction using Cox-proportional models, and churn prediction techniques. - Credit card fraud analysis with a focus on handling imbalanced data and neural networks. - Sentiment analysis and topic mining from the New York Times are addressed using similarity measures like cosine similarity, chi-square, and N-grams. - part-of-spESh tagging, stemming, chunking - sales funnel analysis, A/B testing, and campaign effectiveness. - Web page layout effectiveness - recommendation systems with collaborative filtering - customer segmentation strategies and lifetime value- portfolio risk conformance and optimization, and Uber alternative routing with graph construction and route optimization.

Theory:  
45Periods

## **PRACTICAL EXERCISES:**

1. Churn Analysis using Cox-Proportional Models: Implement Cox-Proportional Hazards models for customer churn prediction.
2. Credit Card Fraud Detection with Neural Networks: Build a neural network model to detect fraudulent transactions in an imbalanced dataset.
3. Sentiment Analysis of New York Times Articles: Perform sentiment analysis using cosine similarity, chi-square, and N-grams.
4. Part-of-SpESh Tagging, Stemming, and Chunking: Apply POS tagging, stemming, and chunking techniques to a text dataset.
5. Sales Funnel Analysis and A/B Testing: Conduct sales funnel analysis and design A/B tests to evaluate marketing campaign effectiveness.
6. Web Page Layout Effectiveness Evaluation: Assess and improve web page layout effectiveness using analytical tools.
7. Collaborative Filtering Recommendation System: Create a recommendation system using user-based and item-based collaborative filtering.
8. Customer Segmentation and Lifetime Value Analysis: Use clustering algorithms for customer segmentation and analyze their lifetime value.
9. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
10. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
11. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file and compute the accuracy with a few test data sets.
12. Implement naïve Bayesian Classifier model to classify a set of documents and measure the accuracy, precision, and recall.
13. Write a program to construct a Bayesian network to diagnose CORONA infection using standard WHO Data Set.
14. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using the k-Means algorithm. Compare the results of these two algorithms.
15. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions.
16. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select an appropriate data set for your experiment and draw graphs.

**Practical's: 30 PERIODS**

## **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## **COURSE OUTCOMES:**

Upon completion of this course, the students will be able to:

**C01:** Explain the basic concepts of machine learning.

**C02:** Construct supervised learning models.

**C03:** Construct unsupervised learning algorithms.

**C04:** Build neural network models

**C05:** Build optimization searching and reinforcement models.

**TEXTBOOKS:**

**YOUTUBE RESOURCES:**

**Blue1Brown** - This channel offers visually captivating explanations of various mathematical concepts, including those relevant to machine learning. Their series on neural networks and linear algebra is highly recommended for gaining a deeper understanding of the foundations behind machine learning algorithms.

**sentdex** - With a focus on Python programming and machine learning, this channel provides tutorials and walkthroughs on implementing machine learning algorithms using libraries like TensorFlow, scikit-learn, and PyTorch. It covers a wide range of topics, from basic concepts to advanced techniques.

**Andrew Ng** - Andrew Ng is a prominent figure in the machine learning community, and his lectures from courses like "Machine Learning" and "Deep Learning Specialization" are available on YouTube. These lectures provide a comprehensive introduction to machine learning and deep learning concepts.

**StatQuest with Josh Starmer** - This channel offers easy-to-understand explanations of statistical concepts, machine learning algorithms, and data analysis techniques. The videos are concise and visually engaging, making complex topics more accessible.

**Brandon Rohrer** - Brandon Rohrer's channel covers a variety of machine learning and data science topics, including tutorials on specific algorithms, discussions on best practices, and practical advice for working in the field.

**TOTAL:75 PERIODS**

<b>Course Code</b>	<b>DATA WAREHOUSING AND DATA MINING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AM3404</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>4</b>

### COURSE OBJECTIVE

- To understand data warehousing and mining principles.
- To acquire familiarity with data warehouse architecture and implementation.
- To explore data mining system architecture.
- To comprehend various data preprocessing methods for mining tasks.
- To develop proficiency in classification and prediction techniques.

#### **UNIT I DATA WAREHOUSING AND BUSINESS ANALYSIS: 8**

Data warehousing Components –Building a Data warehouse –Data Warehouse Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – OLAP and Multidimensional Data Analysis.

#### **UNIT II DATA CUBE TECHNOLOGY: 11**

Data Cube Computation: Cube Materialization - Strategies for Data Cube Computation, Data Cube Computation Methods - Multiway Array Aggregation for Full Cube Computation - Star-Cubing: Computing Iceberg Cubes Using a Dynamic Star-Tree Structure - Precomputing Shell Fragments for Fast High-Dimensional OLAP, Processing Advanced Kinds of Queries by Exploring Cube Technology - Sampling Cubes: OLAP-Based - Ranking Cubes, Multidimensional Data Analysis in Cube Space - Prediction Cubes – Multi-feature Cubes - Exception-Based, Discovery-Driven Cube Space Exploration.

#### **UNIT III INTRODUCTION TO DATA MINING: 8**

Why Data Mining? - What Is Data Mining? - What Kinds of Data Can Be Mined? - What Kinds of Patterns Can Be Mined? - Which Technologies Are Used? - Which Kinds of Applications Are Targeted? - Major Issues in Data Mining - Data Objects and Attribute Types - Basic Statistical Descriptions of Data - Data Visualization - Measuring Data Similarity and Dissimilarity.

#### **UNIT IV DATA PREPROCESSING AND MINING TECHNIQUES: 10**

Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation- Architecture of A Typical Data Mining Systems- Classification of Data Mining Systems.

Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods – Mining Various Kinds of Association Rules – Association Mining to Correlation Analysis – Pattern Mining in Multilevel, Multidimensional Space - Constraint-Based Association Mining.

#### **UNIT V MINING OBJECT, SPATIAL, MULTIMEDIA, TEXT AND WEB DATA: 8**

Multidimensional Analysis and Descriptive Mining of Complex Data Objects – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web.

**45 PERIODS**

#### **LIST OF EXPERIMENTS 30 PERIODS**

1. Design a data warehouse schema for a retail company to analyze sales data, customer demographics, and inventory management
2. Given a business scenario, use OLAP (Online Analytical Processing) to generate reports and perform trend analysis for strategic decision-making.
3. Using a dataset containing customer purchase history, apply association rule mining to discover patterns such as frequently co-purchased items.

4. Build and evaluate a predictive model for customer churn prediction using classification algorithms.
5. Utilizing a dataset of online user behaviour, apply sequence mining techniques to extract frequent sequences of website visits.
6. Given a dataset of patient medical records, preprocess the data and build a classifier to predict the likelihood of a patient developing a specific disease.
7. Describe the steps involved in feature selection for classification models. Identify and select relevant features from a high-dimensional dataset.
8. Using sentiment analysis on customer reviews as an example, evaluate the performance of a classification model and interpret the results.
9. Given a dataset of customer demographic information and purchasing behavior, use clustering algorithms to segment customers into distinct groups for targeted marketing campaigns.
10. Using a dataset of online user interactions with a website, use clustering to identify anomalous behavior or detect fraudulent activities.
11. Extract key features from images to perform object recognition using machine learning techniques?
12. Given a dataset of spatial coordinates representing locations of stores and customer residences, use spatial data mining to analyze geographical patterns and optimize store locations.
13. Using text mining, extract topics from a collection of news articles and visualize the relationships between different topics using network analysis techniques.

**TOTAL PERIODS: 75**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOME:**

At end of the course the students can

**CO1:** Enhanced business intelligence through optimized data storage, retrieval, and analysis.

**CO2:** Discovery of valuable patterns and insights from large datasets for informed decision-making.

**CO3:** Accurate categorization and prediction of data instances, facilitating personalized recommendations and risk assessment.

**CO4:** Identification of natural groupings within data for targeted marketing and anomaly detection.

**CO5:** Extraction of meaningful information from diverse data types, enabling comprehensive analysis and understanding.

**TOTAL PERIODS: 75**

**Course Code**

**Federated Learning**

**L T P C**

**AM3405**

**3 0 0 3**

**COURSE OBJECTIVES:**

- To Understand the principles and theory behind Federated learning
- To Gain practical experience in developing distributed machine learning models.
- Analyze and evaluate the federated learning Architectures and
- Apply federated transfer and federated reinforcement learning to real-world problems and domains.
- Keep up-to-date with the latest developments and trends in the field of federated learning

**Course Description**

Federated Learning is a machine learning approach that enables training models across decentralized devices or servers holding local data samples, without exchanging them. It is often used in privacy-sensitive scenarios where data cannot be easily centralized.

**Prerequisites**

- Basic knowledge of Distributed System, machine learning and deep learning
- Familiarity with a programming language Python and TensorFlow / PyTorch

**UNIT I Introduction to Federated Learning**

9

Overview of Federated learning: Motivation-Definition-categories-Applications-challenges-Difference between Federated learning and classical Machine learning – Phases of federated learning model – Privacy Preserving Machine Learning - Impact of Federated learning

**UNIT II Distributed Machine learning**

9

Introduction to DML: The Definition of DML- DML Platforms-Privacy-Motivated DML: Privacy Preserving Decision Trees –Privacy Preserving Techniques- Privacy-Preserving DML Schemes-Privacy-Preserving Gradient Descent: Vanilla Federated Learning - Privacy-Preserving Methods

**UNIT III Federated Learning Algorithms**

9

Horizontal Federated Learning: Architecture of HFL - Federated Averaging Algorithms-Challenges and Outlook– Vertical Federated Learning: Architecture of VFL-Algorithms of VFL- Challenges and Outlook

**UNIT IV Federated Transfer learning and Federated Reinforcement learning**

9

Heterogeneous Federated Learning – Federated Transfer Learning – The FTL Framework: Additively Homomorphic Encryption -The FTL Training Process-The FTL Prediction Process- Security Analysis-Secret Sharing-Based FTL– Introduction to Reinforcement Learning– Distributed Reinforcement Learning– Federated Reinforcement Learning

**UNIT V Applications of federated learning**

9

Application of Federated learning in Healthcare, Finance and banking sector and Internet of things – Edge computing in federated learning– Future Trends and Development.

**Theory: 45 PERIODS**

## **COURSE OUTCOMES:**

**OUTCOMES:** Upon completion of the course, the students will be able to:

**C01:** Understand the fundamental principles and applications of federated learning and distinguish federated learning and classical machine models.

**C02:** Apply distributed machine learning concepts to analyze and model data, with a focus on developing real time scenarios

**C03:** Implement and evaluate various federated learning concepts, including horizontal federated architectures and vertical federated architectures

**C04:** Apply federated transferring and federated reinforcement learning to solve real-world problems, including image generation, text generation, and artistic applications.

**C05:** Evaluate the federated models using various use cases and exploring the future trends of federated learning.

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **TEXT BOOKS:**

- 1.Federated Learning By Qiang Yang Yang Liu Yong Cheng Yan Kang Tianjian Chen Han Yu A Publication In The Morgan & Claypool Publishers Series
- 2.Synthesis Lectures On Artificial Intelligence And Machine Learning,2020

### **REFERENCES:**

<b>ES3404</b>	<b>Employability Enhancement Skills – IV: Leadership and Project Management Skills</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>

### Course Objectives:

- To understand leadership within the context of project management.
- To differentiate between leadership and management roles.
- To learn project initiation processes and setting SMART objectives.
- To build high-performing teams through motivation, empowerment, and effective communication.
- To develop skills in project planning, estimation, resource allocation, risk management, and scheduling.

Unit 1: Understanding Leadership - Introduction to Project Management - Leadership vs. Management - Project Initiation - Setting SMART Objectives

Unit 2: Building High-Performing Teams - Motivation Theories - Empowering Team Members - Leadership Communication - Handling Team Conflicts

Unit 3: Work Breakdown Structure (WBS) - Estimation Techniques - Gantt Charts and Network Diagrams - Resource Allocation - Risk Management

Unit 4: Leading Project Teams - Monitoring and Controlling Progress - Change Management - Quality Management - Stakeholder Communication

Unit 5: Project Closure Activities - Lessons Learned - Celebrating Success - Transition Planning

### Course Outcomes:

**Outcomes:**At the end of the course, students will be able to

CO1: Apply leadership principles to project management scenarios.

CO2: Distinguish between leadership and management functions in project environments.

CO3: Initiate projects effectively by setting SMART objectives.

CO4: Foster high-performing teams through motivation, empowerment, and conflict resolution.

CO5: Proficiently plan, schedule, and manage project activities, resources, risks, and stakeholder communications.

**Total : 30 periods**

**Semester – V**

<b>Course Code</b>	<b>L T P C</b>
<b>AM3501</b>	<b>3 0 0 3</b>

**COMPUTING THEORY AND COMPILER DESIGN****COURSE OBJECTIVES:**

- To understand foundations of computation and construct models of regular expressions and languages.
- To design context free grammar, pushdown automata and Turing machines.
- To understand intermediate code generation.
- To understand run-time environment and implement code generator.
- To learn to implement code optimization.

**UNIT – I FORMAL LANGUAGE AND REGULAR EXPRESSIONS 9**

Languages, Definition Languages regular expressions, Finite Automata – DFA, NFA. Conversion of regular expression to NFA, NFA to DFA. Applications of Finite Automata to lexical analysis, lex tools – pumping lemma.

**UNIT – II CONTEXT FREE GRAMMARS AND PARSING 9**

Context free grammars, derivation, parse trees, ambiguity LL(K) grammars and LL(1) parsing Bottom up parsing, handle pruning, LR Grammar Parsing, LALR parsing, parsing ambiguous grammars, YACC programming specification – Pushdown Automata – pumping lemma.  
Turing Machine – Undecidability

**UNIT – III SYNTAX-DIRECTED TRANSLATION AND INTERMEDIATE-CODE GENERATION 9**

Syntax directed translation, S-attributed and L-attributed grammars, Intermediate code Generation – abstract syntax tree, translation of simple statements and control flow statements. Context Sensitive features – Chomsky hierarchy of languages and recognizers. Type checking, type conversions, equivalence of type expressions, overloading of functions and operations.

**UNIT – IV RUN-TIME ENVIRONMENTS AND CODE GENERATION 9**

Storage organization, Storage Allocation Strategies: Static, Stack and Heap allocation – Parameter Passing – Symbol Tables – Dynamic Storage Allocation – Issues in the design of a code generator – Basic Blocks and Flow graphs – Design of a simple Code Generator – Optimal Code Generation for Expressions – Dynamic Programming Code Generation

**UNIT – V CODE OPTIMIZATION 9**

Principal sources of Optimization – Peep-hole optimization – DAG - Optimization of Basic Blocks – Global Data Flow Analysis – Efficient Data Flow Algorithm – Recent trends in Compiler Design.

**Theory: 45 PERIODS****Course outcomes:**

Upon completion of this course, the student should be able to:

**CO1:** Construct Finite Automata and write regular expression for any pattern.

**CO2:** Design context free grammar, Pushdown Automata and Turing Machine for computational functions.

**C03:** Understand semantic rules and intermediate code generation.

**C04:** Understand run-time environment and implement code generation.

**C05:** Apply code optimization techniques.

<b>Course Code</b>		<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AM3502</b>	<b>NATURAL LANGUAGE PROCESSING</b>	<b>3</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- To learn the mathematical foundations and basics of Natural Language Processing.
- To understand the text data processing technologies for processing text data.
- To understand the role of Information Retrieval and Information Extraction in Text Analytics.
- To acquire knowledge on text data analytics using language models.
- To learn about NLP Tools and real-time examples of NLP.

**UNIT I Introduction to Natural Language Processing** **9**

Natural Language Processing – Linguistic Background -- Mathematical Foundations - Morphological Analysis – Tokenization – Stemming - Lemmatization – Boundary Determination.

**UNIT II Text Data Analysis** **9**

Reading unstructured data - Representing text data - Part of speech tagging – Syntactic representation - Text similarity - WordNet-based similarity - Shallow parsing - Semantic representation.

**UNIT III Information Retrieval and Extraction** **9**

Information Retrieval: Design features of Information Retrieval Systems-Classical, Nonclassical, Alternative Models of Information Retrieval – Information extraction - Named Entity Recognition Relation Identification - Template filling.

**UNIT IV Language Modelling** **9**

Language model - Probabilistic Models - n-gram language models- Hidden Markov Model- Topic Modelling - Graph Models -Feature Selection and classifiers -Rule-based Classifiers - Maximum entropy classifier – Clustering-Word and Phrase-based Clustering.

**UNIT V NLP Tools and Applications** **9**

Tools: Natural Language Tool kit, Apache OpenNLP. Applications of Text Analytics – Applications in social media - Life science - Legal Text – Visualization - Case studies.

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Theory:45Periods**

**COURSE OUTCOMES:**

**OUTCOMES:** Upon completion of the course, the students will be able to:

CO1: Understand the mathematical foundations and basics of Natural Language Processing.

CO2: Process the text data at the syntactic and semantic level.

C03: Extract the key information from Text data.

C04: Analyze the text content to provide predictions related to a specific domain using language models.

C05: To design an innovative application using NLP components.

**TOTAL: 45PERIODS**

**Course Code**

**L T P C**

**AM3403**

**BIG DATA ANALYTICS**

**3 0 2 4**

**COURSE OBJECTIVES:**

- To Understand the Big Data Platform and its Use cases
- To Provide the concept of Hadoop framework and HDFS
- To Understand Map-Reduce Jobs and Spark Framework
- To Provide hands on Hadoop Eco System
- To provide Exposure to Data Analytics with R and Spark Shell

**COURSE DESCRIPTION:**

The course begins with an overview of the fundamental concepts of big data, including the characteristics of big data, challenges associated with its processing and analysis, and the technologies used to manage big data infrastructure. Students will then explore various data processing frameworks, such as Apache Hadoop and Apache Spark, and learn how to leverage them to handle and analyze large-scale datasets efficiently.

**PRE- REQUISITES:**

- Should have knowledge of one Programming Language (Java preferably)
- Practice of SQL (queries and sub queries), exposure to Linux Environment.

**UNIT I INTRODUCTION TO BIG DATA ANALYTICS**

**9**

**Data Storage and Analysis:** Types of Digital Data, Introduction to Big Data, Evolution, Characteristics of Big Data, Traditional Business Intelligence versus Big Data.

**Big Data Analytics:** Classification of Analytics, Big Data Analytics important, Typical Analytical Architecture – Requirement for new analytical architecture – Challenges in Big Data Analytics, Top Analytics Tools – Need of big data frameworks. Data Science - Data Scientist - Terminologies used in Big Data Environments.

**UNIT II HADOOP FRAMEWORK AND HDFS (Hadoop Distributed File System)**

**9**

**Hadoop:**History of Hadoop– Requirement of Hadoop Framework - Design principle of Hadoop – Comparison with other system - Hadoop Components – Hadoop 1 vs Hadoop 2 – Hadoop Daemon’s – Apache Hadoop, Analysing, Data with Unix tools, Analysing Data with Hadoop, Hadoop Streaming.

**HDFS:** HDFS Concepts, HDFS Commands, Design of HDFS, Command Line Interface, Hadoop file system interfaces, Data flow, Data Ingest with Flume and Scoop and Hadoop archives, Hadoop I/O: Compression, Serialization, Avro and File-Based Data structures.

**UNIT III MAP REDUCE AND SPARK FRAMEWORK**

**9**

**Map Reduce:** Anatomy of a Map Reduce Job Run, Failures, Job Scheduling, Shuffle and Sort, Task Execution, Map Reduce Types and Formats, Map Reduce Features. Map Reduce Programming: I/O formats, Map side join, Reduce Side Join, Secondary sorting, Pipelining MapReduce jobs.

**Spark Framework**

Introduction to GPU Computing, CUDA Programming Model, CUDA API, Simple Matrix, Multiplication in CUDA, CUDA Memory Model, Shared Memory Matrix Multiplication, Additional CUDA API Features.

**Unit IV HADOOP ECO SYSTEM**

**9**

Introduction to Hadoop ecosystem technologies: Hadoop Eco System, Hadoop Streaming, Infosphere Big Insights and Big Sheets. Scripting language: Introduction to PIG, Execution Modes of Pig, Comparison of Pig with Databases, Grunt, Pig Latin, User Defined Functions, Data Processing operators. Serialization: AVRO, Co-ordination: Zookeeper. Hive: Hive Shell, Hive Services, Hive Metastore, Comparison with

Traditional Databases, HiveQL, Tables, QueryingData and User Defined Functions.HBase: HBasics, Concepts, Clients, Example, Hbase Versus RDBMS.Big SQL: Introduction. Streaming: Flink, Storm.

## UNIT V: DATA ANALYTICS

9

**Data Analytics with R:** Machine Learning: Introduction, Supervised Learning, Unsupervised Learning, Regression Model, Clustering, Collaborative Filtering, Associate Rule Making, Decision Tree, Big Data Analytics with BigR.

**Data Analysis with Spark Shell:** Writing Spark Application - Spark Programming in Scala, Python, R, Java - Application Execution.

**Spark SQL and GraphX:** SQL Context – Importing and Saving data – Data frames – using SQL – GraphX overview – Creating Graph – Graph Algorithms.

**Spark Streaming:** Overview – Errors and Recovery – Streaming Source – Streaming live data with spark.

Recent Trends in Big Data Analytics.

**Theory :45 Periods**

### Practical Experiments

1. HDFS Commends Map Reduce Program to show the need of Combiner
2. Map Reduce I/O Formats-Text, key-value Map Reduce I/O Formats –Nline, Multiline
3. Sequence file Input/Output Formats Secondary sorting
4. Distributed Cache & Map Side Join, Reduce side Join Building and Running a Spark Application Word count in Hadoop and Spark Manipulating RDD
5. Inverted Indexing in Spark Sequence alignment problem in Spark Implementation of Matrix algorithms in Spark SparkSql programming, Building Spark Streaming application

**Practical: 30 Periods**

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

**OUTCOMES** upon completion the students will be able to:

**CO1:**Identify Big Data and its Business Implications.

**CO2:**Understand the concept of Hadoop framework and HDFS

**CO3:**Understand the Map-Reduce Jobs and Spark Framework

**CO4:**Analyze Infosphere Big Insights Big Data Recommendations.

**CO5:**Apply Data Analytics with R and Spark Shell

#### **YouTube Resources**

**edureka!** - This channel offers comprehensive tutorials, webinars, and courses on big data technologies, including Hadoop, Spark, and related ecosystems. Viewers can find videos covering various aspects of big data analytics, such as data ingestion, processing, analysis, and visualization.

**Data School** - Data School provides tutorials and practical tips on data science and big data analytics topics. The channel covers a wide range of subjects, including data preprocessing, machine learning, and data visualization, with a focus on practical applications and real-world examples.

**Big Data University** - Big Data University offers tutorials and courses on big data technologies and analytics. The channel covers topics like Hadoop, Spark, NoSQL databases, and cloud-based big data solutions, catering to both beginners and experienced professionals in the field.

**Google Cloud Platform** - The Google Cloud Platform (GCP) channel features videos and tutorials on big data solutions offered by Google Cloud, such as BigQuery, Dataflow, and Dataproc. Viewers can learn about data analytics best practices, architectural patterns, and case studies on GCP.

**Databricks** - Databricks' channel provides tutorials, webinars, and demonstrations on Apache Spark and Delta Lake, offering insights into big data analytics and machine learning workflows. Viewers can find content on Spark optimization, data engineering, and advanced analytics techniques.

**Cloudera** - Cloudera's channel offers videos and presentations on big data technologies like Hadoop, Spark, and Impala. Viewers can access tutorials, case studies, and expert discussions on topics related to big data analytics, data engineering, and machine learning.

**Total:75 Periods**

<b>ES3501</b>	<b>Employability Enhancement Skills – V: Innovation and Entrepreneurship</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>

**Course Objectives:**

- To understand the fundamentals of entrepreneurship and innovation.
- To explore the components of an innovation ecosystem.
- To learn the principles of the Lean Startup methodology and its application.
- To develop skills in identifying entrepreneurial opportunities.
- To cultivate creativity and ideation techniques for innovation

Unit 1: Understanding Innovation - Entrepreneurship Fundamentals - Innovation Ecosystem - The Lean Startup Methodology - Identifying Opportunities

Unit 2: Creativity and Ideation Techniques - Market Research and Validation - Customer Discovery - Prototype Development

Unit 3: Business Model Canvas - Revenue Models - Customer Acquisition and Retention - Pricing Strategies - Scalability and Growth

Unit 4: Financial Planning - Funding Options - Pitching Investors - Valuation Method - Financial Management

Unit 5: Go-to-Market Strategy - Building a Team - Scaling Operations - Managing Growth - Exit Strategies

**Course Outcomes:**

**Outcomes:** upon completion of the course, students will be able to

**C01:** Demonstrate an understanding of entrepreneurship fundamentals and innovation principles.

**C02:** Analyze and navigate innovation ecosystems.

**C03:** Apply Lean Startup methodology to validate and iterate business ideas.

**C04:** Identify and evaluate entrepreneurial opportunities effectively.

**C05:** Generate creative ideas, conduct market research, validate concepts, and develop prototypes for entrepreneurial ventures.

## Semester VI

**Course Code**  
**AM3601**

**Machine Learning Operations**

**3 0 0 3**

### **COURSE OBJECTIVES:**

- Understand the principles and theory behind Machine learning operations
- Gain practical experience in developing MLOps projects.
- Analyze and evaluate the MLOps tools, Frameworks and platforms.
- Apply MLOps architecture and maturity models to real-world problems and domains.
- Keep up-to-date with the CI/CD deployments to the real world domains

### **Course Description**

This course provides an introduction to the theory and practical applications of Machine learning operations. Students will learn the fundamental concepts and techniques related to Machine learning operations

### **Prerequisites**

- **Basic understanding of Machine Learning concepts**

### **UNIT I Introduction**

**9**

Machine learning challenges – machine learning operations: Definition-needs-challenges – Difference between Machine learning and machine learning operations-DEVOPS Vs MLOps- MLOps life cycle-components of MLOps- MLOps Actors- Implementation level of MLOps

### **UNIT II MLOps principles**

**9**

Iterative Incremental process- Automation - Continuous X- Versioning- Experiments Tracking-Testing-Monitoring -ML Test Score System- Reproducibility-Deployment

### **UNIT III MLOps Tools, Frameworks and platforms**

**9**

MLOps Tools :Development and deployment -AutoML -Data Validations-Data exploration -Data version control -Data inspection -Model serving -Testing and maintenance -Experiment tracking -Model Interpretability -Frameworks: Workflow -Deploying and Serving-Workflow orchestration-Platforms : Full -Fledged -Data Processing-Monitoring

### **UNIT IV Machine learning operations Architecture and Maturity model**

MLOpsv2 architecture: Classical machine learning architecture- Machine Learning CV architecture- Machine Learning NLP architecture

Maturity model-levels of maturity models- No MLOps- DevOps no MLOps- Automated Training- Automated Model Deployment- Full MLOps Automated Retraining-

### **UNIT V Continuous Integration and Continuous Deployment (CI/CD)**

**9**

CI/CD principles and practices-Integrating machine learning into CI/CD pipelines- Automated testing for machine learning models- Implementing CI/CD workflows for model deployment

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## Assessments & Grading

Quizzes, Assignments/ Project, 2IAs ,Model, Final Examinatio

### **COURSE OUTCOMES:**

**OUTCOMES: Upon completion of the course, the students will be able to:**

**CO1:** Understand the fundamental principles and applications of Machine learning operations and distinguish between DEVOPS and MLOps

**CO2:** Apply MLOps principles to analyze and model data, with a focus on their role in deploying ML in production

**CO3** Analyze and apply various MLOps tools, Frameworks and platforms

**CO4:** Apply MLOps architecture and maturity models to solve real-world problems, including image generation, text generation, and artistic applications.

**CO5:** Evaluate the Continuous Integration and Continuous Deployment (CI/CD) of ML models

**TOTAL45 PERIODS**

Course Code	<b>Generative Artificial Intelligence</b>	L	T	P	C
AM3602		3	0	2	4

## COURSE OBJECTIVES:

The main objectives of this course are to:

- Understand the principles and theory behind generative AI.
- Gain practical experience in developing generative AI models.
- Analyze and evaluate the ethical and societal implications of generative AI.
- Apply generative AI techniques to real-world problems and domains.
- Keep up-to-date with the latest developments and trends in the field of generative AI.

## Course Description

This course provides an introduction to the theory and practical applications of Generative Artificial Intelligence. Students will learn the fundamental concepts and techniques related to generative models and gain hands-on experience with creating and using generative AI systems.

## Prerequisites

- Basic knowledge of machine learning and deep learning.
- Familiarity with a programming language (e.g., Python).

### UNIT I Introduction to Generative AI 9

Overview of Generative AI and its applications – Difference between generative and discriminative models – Historical perspective and key milestones – Ethical and societal implications.

### UNIT II Probability and Statistics for Generative AI 9

Probability distributions and their role in generative models – Maximum Likelihood Estimation (MLE) – Bayesian Inference and Maximum a Posteriori (MAP) estimation – Generative models as probabilistic models

### UNIT III Generative Models 9

Introduction to Autoencoders – Variational Autoencoders (VAE) – Generative Adversarial Networks (GAN) – Flow-based models – Practical implementation and hands-on exercises (using *TensorFlow*, *PyTorch*, *Jupyter Notebook*, *Keras*, etc).

### UNIT IV Applications of Generative AI 9

Image generation and manipulation – Text generation and natural language processing – Anomaly detection and data augmentation – Style transfer and artistic applications – Real-world use cases (Art & Design, Medical Imaging, Content creation, Chatbots, Virtual Assistants, Cybersecurity, etc.) and industry examples. Guest Lectures by Industry Experts, and Researchers

### UNIT V Evaluation and Ethical Considerations 9

Metrics for evaluating generative models (e.g., Inception Score, FID) – Ethical concerns in generative AI, including bias and fairness – Privacy and security considerations – Future trends and emerging technologies in Generative AI.

**Theory :45 PERIODS**

## Assignments / Projects (sample):

Write a literature review on the historical development and key milestones in generative AI, highlighting the most influential papers and breakthroughs.

1. Solve a set of probability and statistics problems related to generative models and their applications.
2. Implement a simple autoencoder model and train it on a dataset of your choice for image compression or denoising.
3. Implement a Variational Autoencoder to generate new samples in a chosen domain (e.g., images or text).
4. Create a GAN model to generate synthetic images or text data and evaluate its performance.
5. Develop a text generation model that can generate coherent and contextually relevant text paragraphs or poetry.
6. Implement an image style transfer algorithm to transform photographs into various artistic styles.
7. Write an essay analyzing the ethical implications of generative AI in society, focusing on privacy, bias, and security concerns.
8. Choose a specific industry or domain (e.g., healthcare, finance, or art) and propose a generative AI application that could be beneficial in that field. Provide a detailed plan for its implementation.
9. (Final Project) Design and implement a generative AI project of your choice, which can be an image generator, text generator, or any creative application. Present the project and its results in a report or presentation.

**Practicals:30 PERIODS**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOMES:**

**OUTCOMES:** Upon completion of the course, the students will be able to:

**C01:** Understand the fundamental principles and applications of Generative Artificial Intelligence and distinguish between generative and discriminative models.

**C02:** Apply probability and statistics concepts to analyze and model data, with a focus on their role in generative models.

**C03:** Implement and evaluate various generative models, including Autoencoders, Variational Autoencoders (VAE), and Generative Adversarial Networks (GANs).

**C04:** Apply generative AI techniques to solve real-world problems, including image generation, text generation, and artistic applications.

**C05:** Evaluate generative models using appropriate metrics and critically analyze the ethical implications, privacy concerns, and societal impact of generative AI technologies.

### **TEXT BOOKS:**

1. **3Blue1Brown** - While not specific to generative AI, this channel provides fantastic visual explanations of mathematics and concepts that are fundamental to AI and machine learning.
2. **sentdex** - This channel focuses on machine learning and AI using Python. It includes tutorials on various topics, including generative models.
3. **Two Minute Papers** - This channel offers concise summaries of research papers and breakthroughs in computer graphics, machine learning, and AI, including generative AI.
4. **DeepLizard** - This channel provides tutorials on machine learning and deep learning topics, which can be useful for understanding the technical aspects of generative AI.
5. **Andrew Ng's DeepLearning.ai** - The deeplearning.ai courses on Coursera, created by Andrew Ng, are also available on YouTube. These videos cover deep learning and neural networks, which are foundational to generative AI.
6. **Stanford University's Machine Learning** - You can find recordings of Stanford University's machine learning course on YouTube, which includes lectures on relevant topics. (Stanford Online)
7. **PyTorch** - The official PyTorch YouTube channel provides tutorials and resources for learning PyTorch, a popular framework for deep learning and generative AI.
8. **TensorFlow** - The official TensorFlow YouTube channel offers tutorials and resources for learning TensorFlow, another widely used deep learning framework.

**TOTAL:75 PERIODS**

**Course Code**

**AM3603**

**Deep learning for vision**

**L T P C**

**3 0 2 3**

**COURSE OBJECTIVES:**

- To introduce basic computer vision concepts
- To understand the methods and terminologies involved in deep neural network
- To impart knowledge on CNN
- To introduce RNN and Deep Generative model
- To solve real world computer vision applications using Deep learning.

**UNIT I COMPUTER VISION BASICS**

**6**

Introduction to Image Formation, Capture and Representation; Linear Filtering, Correlation, Convolution, Visual Features and Representations: Edge, Blobs, Corner Detection; Visual Features extraction: Bag-of-words, VLAD; RANSAC, Hough transform.

**UNIT II INTRODUCTION TO DEEP LEARNING**

**6**

Deep Feed-Forward Neural Networks – Gradient Descent – Back-Propagation and Other Differentiation Algorithms – Vanishing Gradient Problem – Mitigation – Rectified Linear Unit (ReLU) – Heuristics for Avoiding Bad Local Minima – Heuristics for Faster Training – Nestors Accelerated Gradient Descent – Regularization for Deep Learning – Dropout – Adversarial Training – Optimization for Training Deep Models.

**UNIT III VISUALIZATION AND UNDERSTANDING CNN**

**6**

Convolutional Neural Networks (CNNs): Introduction to CNNs; Evolution of CNN Architectures: AlexNet, ZFNet, VGG. Visualization of Kernels; Backprop-to-image/ Deconvolution Methods; Deep Dream, Hallucination, Neural Style Transfer; CAM, Grad-CAM.

**UNIT IV CNN and RNN FOR IMAGE AND VIDEO PROCESSING**

**6**

CNNs for Recognition, Verification, Detection, Segmentation: CNNs for Recognition and Verification (Siamese Networks, Triplet Loss, Contrastive Loss, Ranking Loss); CNNs for Detection: Background of Object Detection, R-CNN, Fast R-CNN. CNNs for Segmentation: FCN, SegNet. Recurrent Neural Networks (RNNs): Review of RNNs; CNN + RNN Models for Video Understanding: Spatio-temporal Models, Action/Activity Recognition

**UNIT V DEEP GENERATIVE MODELS**

**6**

Deep Generative Models: Review of (Popular) Deep Generative Models: GANs, VAEs Variants and Applications of Generative Models in Vision: Applications: Image Editing, Inpainting, Superresolution, 3D Object Generation, Security; Recent Trends: Self-supervised Learning; Reinforcement Learning in Vision

**Theory :30 PERIODS**

**PRACTICAL EXERCISES:**

1. Implementation of basic Image processing operations including Feature Representation and Feature Extraction
2. Implementation of simple neural network
3. Study of pretrained deep neural network model for Images
4. CNN for Image classification
5. CNN for Image segmentation

6. RNN for video processing

7. Implementation of Deep Generative model for Image editing

**PRACTICALS:30 PERIODS**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes, Assignments/ Project, 2IAs ,Model, Final Examinatio

### **COURSE OUTCOMES:**

**OUTCOMES:Upon successful completion of this course, students will be able to:**

**CO 1:** Implement basic Image processing operations

**CO 2:** Understand the basic concept of deep learning

**CO 3:** Design and implement CNN and RNN and Deep generative model

**CO 4:** Understand the role of deep learning in computer vision applications.

**CO 5:** Design and implement Deep generative model

### **TEXT BOOKS**

**TOTAL:60 PERIODS**

## **.Semester – VII**

<b>Course Code</b>	<b>PROFESSIONAL ETHICS AND UNIVERSAL HUMAN VALUES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>HS3701</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

### **COURSE OBJECTIVE:**

- To enable the students to create an awareness of Engineering Ethics and Human Values, to instill Moral and Social Values and Loyalty, and to appreciate the rights of others.

### **Course Description**

This course explores the intersection of ethics and professionalism in various fields, including business, medicine, law, engineering, and beyond. This course delves into the fundamental principles and theories of ethics, focusing on their practical application within professional contexts.

### **Prerequisites**

- Willingness to engage with diverse perspectives and challenge personal biases in ethical reasoning.
- Awareness of contemporary societal issues related to diversity, equity, inclusion, social justice, and sustainability, as these issues often intersect with professional ethics and universal human values.

### **UNIT I HUMAN VALUES**

**10**

Morals, values, and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

### **UNIT II ENGINEERING ETHICS**

**9**

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

### **UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION**

**9**

Engineering as Experimentation – Engineers as Responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

### **UNIT IV SAFETY, RESPONSIBILITIES, AND RIGHTS**

**9**

Safety and Risk – Assessment of Safety and Risk – Risk-Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

### **UNIT V GLOBAL ISSUES**

**8**

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership – Code of Conduct – Corporate Social Responsibility.

**Theory: 45 PERIODS**

## **Course Format**

Lectures and discussions, Hands-on training , Guest lectures by Experts, Group discussions and presentations, Online resources and tutorials

## **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## **COURSE OUTCOME:**

**OUTCOME:** upon completion of this course the student will be able to

- to apply ethics in society, discuss the ethical issues related to engineering, and realize societal responsibilities and rights.

## **TEXT BOOKS:**

\*Students are permitted to choose all the Professional Electives from a particular vertical or from different verticals. However, Students are restricted to select from not more than 2 verticals.

## Vertical 1: Full Stack Development

Course Code	<b>WEB DEVELOPMENT 5.0</b>	L	T	P	C
AMPEV13X01		2	0	2	3

### **COURSE OBJECTIVES:**

- To define the evolution of web development from static websites to modern web applications
- To explore the concepts of components, JSX, and state management.
- To define Node.js and Express.js and their roles in server-side development.
- To integrate databases with web applications.
- To understand various deployment strategies for web applications.

### **Unit 1: Introduction to Modern Web Development** **6**

Evolution of Web Development- Historical overview of web development- Introduction to Web Development 5.0 and its characteristics- Modern Web Development Ecosystem- Overview of front-end and back-end technologies- Introduction to popular frameworks and libraries

### **Unit 2: Front-end Development with React.js** **6**

Introduction to React.js- Overview of React.js and its key features- Understanding JSX syntax and component-based architecture- Components and State Management- Creating functional and class components- Managing state and props in React applications

### **Unit 3: Back-end Development with Node.js and Express.js** **6**

Introduction to Node.js and Express.js- Overview of Node.js and its event-driven architecture- Introduction to Express.js as a web application framework- Building RESTful APIs- Understanding RESTful principles- Creating a simple RESTful API with Express.js

### **Unit 4: Database Integration and Authentication** **6**

Database Integration- Overview of database options (MongoDB, MySQL, etc.)- Integrating MongoDB with Express.js- User Authentication and Authorization- Introduction to authentication and authorization- Implementing user authentication using Passport.js

### **Unit 5: Deployment and Project Work** **6**

Deployment Strategies- Traditional Server Hosting-Cloud Hosting-Containerization-Container Orchestration-Serverless Architecture-Continuous Deployment-Blue-Green Deployment-Feature Toggles- Best Practices- Project Work Guidelines- Tips for effective project planning, collaboration, and troubleshooting

**Theory: 30 Periods**

### **SAMPLE LIST OF EXPERIMENTS**

1. Installation and configuration of development tools.
2. Introduction to version control using Git.
3. Creating a basic HTML5 and CSS3 web page.
4. Introduction to responsive design principles.

5. Building a simple React application.
6. Implementing components and managing state.
7. Practical exercises on creating stateful and stateless components.
8. Implementing interactivity in React applications.
9. Creating a basic web server using Node.js.
10. Implementing asynchronous programming with callbacks and Promises.
11. Integration of MongoDB with Express.js.

**Practical:30 Periods**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- CO1** Understand and Apply Modern Web Development Concepts.
- CO2** Create interactive and dynamic user interfaces with React.js.
- CO3** Apply design patterns to new projects and re-factor existing code.
- CO4** Implement secure user authentication and authorization using Passport.js.
- CO5** Understand various deployment strategies and hosting platforms.

**TEXTBOOKS:**

1. "Learning React" by Alex Banks and Eve Porcello
- 2."Node.js Design Patterns" by Mario Casciaro
3. "The DevOps Handbook" by Gene Kim, Jez Humble, Patrick Debois, and John Willis.

**REFERENCES:**

- 1."Express in Action" by Evan Hahn
- 2."MongoDB: The Definitive Guide" by Shannon Bradshaw, Eoin Brazil, Kristina Chodorow

**Total :60 Periods**

Course Code	<b>APP DEVELOPMENT</b>	L	T	P	C
AMPEV13X02		2	0	2	3

### **COURSE OBJECTIVES:**

- To learn the development of native applications with basic GUI Components
- To develop cross-platform applications with event handling
- To develop applications with location and data storage capabilities
- To develop web applications with database access

### **UNIT I FUNDAMENTALS OF MOBILE & WEB APPLICATION DEVELOPMENT 6**

Basics of Web and Mobile application development, Native App , Hybrid App, Cross-platform App, What is Progressive Web App, Responsive Web design

### **UNIT II NATIVE APP DEVELOPMENT USING JAVA 6**

Native Web App , Benefits of Native App, Scenarios to create Native App, Tools for creating Native App, Cons of Native App, Popular Native App Development Frameworks, Java & Kotlin for Android, Swift & Objective-C for iOS, Basics of React Native, Native Components, JSX, State, Props

### **UNIT III HYBRID APP DEVELOPMENT 6**

Hybrid Web App, Benefits of Hybrid App, Criteria for creating Native App, Tools for creating Hybrid App, Cons of Hybrid App, Popular Hybrid App Development Frameworks, Ionic, Apache Cordova

### **UNIT IV CROSS-PLATFORM APP DEVELOPMENT USING REACT-NATIVE 6**

What is Cross-platform App, Benefits of Cross-platform App, Criteria for creating Cross-platform App, Tools for creating Cross-platform App, Cons of Cross-platform App, Popular Cross-platform App Development Frameworks, Flutter, Xamarin, React-Native, Basics of React Native, Native Components, JSX, State, Props

### **UNIT V NON-FUNCTIONAL CHARACTERISTICS OF APP FRAMEWORKS 6**

Comparison of different App frameworks, Build Performance ,App Performance ,Debugging capabilities, Time to Market , Maintainability ,Ease of Development ,UI /UX, Reusability

**Theory 30**

### **SAMPLE LIST OF EXPERIMENTS**

1. Using react native, build a cross platform application for a BMI calculator.
2. Build a cross platform application for a simple expense manager which allows entering expenses and income on each day and displays category wise weekly income and expense.
3. Develop a cross platform application to convert units from imperial system to metric system ( km to miles, kg to pounds etc.,)
4. Design and develop a cross-platform application for day-to-day task (to-do) management.
5. Design an android application using Cordova for a user login screen with username, password, reset button and a submit button. Also, include header image and a label. Use layout managers.
6. Design and develop an android application using Apache Cordova to find and display the current location of the user.

7. Write programs using Java to create Android application having Databases
  - a. For a simple library application.
  - b. For displaying books available, books lend, book reservation. Assume that student
  - c. information is available in a database which has been stored in a database server.

**Practical:30 periods**

#### **COURSE OUTCOMES:**

**On completion of this course, the students will be able to:**

**C01** Develop Native application with GUI Components.

**C02** Develop hybrid applications with basic event handling.

**C03** Implement cross-platform applications with location and data storage capabilities.

#### **TEXT BOOKS:**

1. Head First Android Development, Dawn Griffiths, O'Reilly, 1st edition

2. Apache Cordova in Action, Raymond K. Camden, Manning, 2015

3. Full Stack React Native: Create beautiful mobile apps with JavaScript and React Native, Anthony Accomazzo, Houssein Djirdeh, Sophia Shoemaker, Devin Abbott, FullStackpublishing

#### **REFERENCES:**

1. Android Programming for Beginners, John Horton, Packt Publishing, 2nd Edition

2. Native Mobile Development by Shaun Lewis, Mike Dunn

3. Building Cross-Platform Mobile and Web Apps for Engineers and Scientists: An Active Learning Approach, Pawan Lingras, Matt Triff, Rucha Lingras

4. Apache Cordova 4 Programming, John M Wargo, 2015

5. React Native Cookbook, Daniel Ward, Packt Publishing, 2nd Edition

**TOTAL:60 Periods**

Course Code	<b>UI AND UX DESIGN</b>	L	T	P	C
AMPEV13X03		2	0	2	3

**COURSE OBJECTIVES:**

- To provide a sound knowledge in UI & UX
- To understand the need for UI and UX
- To understand the various Research Methods used in Design
- To explore the various Tools used in UI & UX
- Creating a wireframe and prototype

**UNIT I FOUNDATIONS OF DESIGN 6**

UI vs. UX Design - Core Stages of Design Thinking- Divergent and Convergent Thinking –Brain storming and Game storming -Observational Empathy

**UNIT II FOUNDATIONS OF UI DESIGN 6**

Visual and UI Principles - UI Elements and Patterns - Interaction Behaviors and Principles –Branding-Style Guides

**UNIT III FOUNDATIONS OF UX DESIGN 6**

Introduction to User Experience - Why You Should Care about User Experience – Understanding User Experience - Defining the UX Design Process and its Methodology - Research in User Experience Design - Tools and Method used for Research - User Needs and its Goals – Know about Business Goals

**UNIT IV WIRE FRAMING,PROTO TYPING AND TESTING 6**

Sketching Principles - Sketching Red Routes - Responsive Design – Wire framing – Creating Wire flows-Building a Prototype-Building High-Fidelity Mockups- Designing Efficiently with Tools - Interaction Patterns - Conducting Usability Tests - Other Evaluative User Research Methods –Synthesizing Test Findings –Proto type Iteration

**UNIT V RESEARCH, DESIGNING,IDEATING,& INFORMATION ARCHITECTURE 6**

Identifying and Writing Problem Statements - Identifying Appropriate Research Methods – Creating Personas - Solution Ideation - Creating User Stories - Creating Scenarios - Flow Diagrams – Flow Mapping-Information Architecture

**Theory: 30 periods**

**SAMPLE LIST OF EXPERIMENTS**

1. Designing a Responsive layout for an societal application
2. Exploring various UI Interaction Patterns
3. Developing an interface with proper UI Style Guides
4. Developing Wireflow diagram for application using open source software
5. Exploring various open source collaborative interface Platform
6. Hands on Design Thinking Process for a new product
7. Brainstorming feature for proposed product
8. Defining the Look and Feel of the new Project

9. Create a Sample Pattern Library for that product (Mood board, Fonts, Colors based on UI principles)
10. Identify a customer problem to solve
11. Conduct end-to-end user research - User research, creating personas, Ideation process (User stories, Scenarios), Flow diagrams, Flow Mapping
12. Sketch, design with popular tool and build a prototype and perform usability testing and identify improvements

**PRACTICAL : 30 PERIODS**

**COURSE OUTCOMES:**

**On completion of this course, the students will be able to:**

- C01** Build UI for user Applications
- C02** Evaluate UX design of any product or application
- C03** Demonstrate UX Skills in product development
- C04** Implement Sketching principles
- C05** Create Wire frame and Prototype

**TEXTBOOKS:**

1. Joel Marsh, "UX for Beginners", O'Reilly, 2022
2. Jon Yablonski, "Laws of UX using Psychology to Design Better Product & Services" O'Reilly 2021

**REFERENCES:**

1. Jenifer Tidwell, Charles Brewer, Aynne Valencia, "Designing Interface" 3rd Edition, O'Reilly 2020
2. Steve Schoger, Adam Wathan "Refactoring UI", 2018
3. Steve Krug, "Don't Make Me Think, Revisited: A Commonsense Approach to Web & Mobile", Third Edition, 2015
4. <https://www.nngroup.com/articles/>
5. [https://www.interaction-design.org/literature.](https://www.interaction-design.org/literature)

**Total :30 Periods**

Course Code	<b>CLOUD SERVICES MANAGEMENT</b>	L	T	P	C
AMPEV13X04		2	0	2	3

### **COURSE OBJECTIVES:**

- Introduce Cloud Service Management terminology, definition & concepts
- Compare and contrast cloud service management with traditional IT service management.
- Identify strategies to reduce risk and eliminate issues associated with the adoption of cloud services.
- Select appropriate structures for designing, deploying, and running cloud-based services in a business environment.
- Illustrate the benefits and drive the adoption of cloud-based services to solve real-world problems

### **UNIT I CLOUD SERVICE MANAGEMENT FUNDAMENTALS 6**

Cloud Ecosystem, The Essential Characteristics, Basics of Information Technology Service Management and Cloud Service Management, Service Perspectives, Cloud Service Models, Cloud Service Deployment Models.

### **UNIT II CLOUD SERVICES STRATEGY 6**

Cloud Strategy Fundamentals, Cloud Strategy Management Framework, Cloud Policy, Key Driver for Adoption, Risk Management, IT Capacity and Utilization, Demand and Capacity matching, Demand Queueing, Change Management, Cloud Service Architecture

### **UNIT III CLOUD SERVICE MANAGEMENT 6**

Cloud Service Reference Model, Cloud Service Lifecycle, Basics of Cloud Service Design, Dealing with Legacy Systems and Services, Benchmarking of Cloud Services, Cloud Service Capacity Planning, Cloud Service Deployment and Migration, Cloud Marketplace, Cloud Service Operations Management.

### **UNIT IV CLOUD SERVICE ECONOMICS 6**

Pricing models for Cloud Services, Freemium, Pay Per Reservation, Pay per User, Subscription-based Charging, Procurement of Cloud-based Services, Capex vs Opex Shift, Cloud service Charging, Cloud Cost Models.

### **UNIT V CLOUD SERVICE GOVERNANCE & VALUE 6**

IT Governance Definition, Cloud Governance Definition, Cloud Governance Framework, Cloud Governance Structure, Cloud Governance Considerations, Cloud Service Model Risk Matrix, Understanding Value of Cloud Services, Measuring the Value of Cloud Services, Balanced Scorecard, Total Cost of Ownership.

**Theory: 30 PERIODS**

### **SAMPLE LIST OF EXPERIMENTS**

1. Create a Cloud Organization in AWS/Google Cloud/or any equivalent Open Source cloud softwares like Openstack, Eucalyptus, OpenNebula with Role-based access control
2. Create a Cost-model for a web application using various services and do Cost-benefit analysis
3. Create alerts for usage of Cloud resources
4. Create Billing alerts for your Cloud Organization
5. Compare Cloud cost for a simple web application across AWS, Azure and GCP and suggest the best one.

**COURSE OUTCOMES:**

**On completion of this course, the students will be able to:**

**CO1** Exhibit cloud-design skills to build and automate business solutions using cloud technologies.

**CO2** Possess Strong theoretical foundation leading to excellence and excitement towards adoption of cloud-based services.

**CO3** Solve the real-world problems using Cloud services and technologies.

**TEXTBOOKS:**

1. Cloud Service Management and Governance: Smart Service Management in Cloud Era by Enamul Haque, Enel Publications
2. Cloud Computing: Concepts, Technology & Architecture by Thomas Erl, Ricardo Puttini, Zaigham Mohammad 2013
3. Cloud Computing Design Patterns by Thomas Erl, Robert Cope, Amin Naserpour

**REFERENCES:**

1. Economics of Cloud Computing by Praveen Ayyappa, LAP Lambert Academic Publishing
2. Mastering Cloud Computing Foundations and Applications Programming Rajkumar Buyya, Christian Vechhiola, S. Thamarai Selvi

**TOTAL:60 PERIODS**

Course Code	<b>DEVOPS</b>	L	T	P	C
AMPEV13X05		2	0	2	3

**COURSE OBJECTIVES:**

- To introduce DevOps terminology, definition & concepts
- To understand the different Version control tools like Git, Mercurial
- To understand the concepts of Continuous Integration/ Continuous Testing/ Continuous Deployment)
- To understand Configuration management using Ansible
- Illustrate the benefits and drive the adoption of cloud-based Devops tools to solve real world problems

**UNIT I INTRODUCTION TO DEVOPS**

**6**

Devops Essentials - Introduction To AWS, GCP, Azure - Version control systems: Git and Github.

**UNIT II COMPILE AND BUILD USING MAVEN & GRADLE**

**6**

Introduction, Installation of Maven, POM files, Maven Build lifecycle, Build phases (compile build, test, package) Maven Profiles, Maven repositories (local, central, global), Maven plugins, Maven create and build Artificats, Dependency management, Installation of Gradle, understand build using Gradle

**UNIT III CONTINUOUS INTEGRATION USING JENKINS**

**6**

Install & Configure Jenkins, Jenkins Architecture Overview, Creating a Jenkins Job, Configuring a Jenkins job, Introduction to Plugins, Adding Plugins to Jenkins, Commonly used plugins (Git Plugin, Parameter Plugin, HTML Publisher, Copy Artifact and Extended choice parameters). Configuring Jenkins to work with java, Git and Maven, Creating a Jenkins Build and Jenkins workspace.

**UNIT IV CONFIGURATION MANAGEMENT USING ANSIBLE**

**6**

Ansible Introduction, Installation, Ansible master/slave configuration, YAML basics, Ansible modules, Ansible Inventory files, Ansible playbooks, Ansible Roles, adhoc commands in ansible

**UNIT V BUILDING DEVOPS PIPELINES USING AZURE**

**6**

Create Github Account, Create Repository, Create Azure Organization, Create a new pipeline, Build a sample code, Modify azure-pipelines' file

**Theory: 30 Periods**

**SAMPLE LIST OF EXPERIMENTS**

1. Create Maven Build pipeline in Azure
2. Run regression tests using Maven Build pipeline in Azure
3. Install Jenkins in Cloud
4. Create CI pipeline using Jenkins
5. Create a CD pipeline in Jenkins and deploy in Cloud
6. Create an Ansible playbook for a simple web application infrastructure
7. Build a simple application using Gradle
8. Install Ansible and configure ansible roles and to write playbooks

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**C01:** Understand different actions performed through Version control tools like Git.

**C02:** Perform Continuous Integration and Continuous Testing and Continuous Deployment using Jenkins by building and automating test cases using Maven & Gradle.

**C03:** Ability to Perform Automated Continuous Deployment

**C04:**Ability to do configuration management using Ansible

**C05:**Understand to leverage Cloud-based DevOps tools using Azure DevOps

**TEXTBOOKS:**

1. Roberto Vormittag, "A Practical Guide to Git and GitHub for Windows Users: From Beginner to Expert in Easy Step-By-Step Exercises", Second Edition, Kindle Edition, 2016.
2. Jason Cannon, "Linux for Beginners: An Introduction to the Linux Operating System and Command Line", Kindle Edition, 2014

**REFERENCES:**

1. Hands-On Azure Devops: Cidc Implementation For Mobile, Hybrid, And Web Applications Using Azure Devops And Microsoft Azure: CICD Implementation for ... DevOps and Microsoft Azure (English Edition) Paperback – 1 January 2020 by Mitesh Soni
2. Jeff Geerling, "Ansible for DevOps: Server and configuration management for humans", First Edition, 2015.
3. David Johnson, "Ansible for DevOps: Everything You Need to Know to Use Ansible for DevOps", Second Edition, 2016.
4. MariotTsitoara, "Ansible 6. Beginning Git and GitHub: A Comprehensive Guide to Version Control, Project Management, and Teamwork for the New Developer", Second Edition, 2019.
5. <https://www.jenkins.io/user-handbook.pdf> 7. <https://maven.apache.org/guides/getting-started/>

**TOTAL:60 PERIODS**

Course Code	<b>ADVANCED WEB FRAMEWORKS AND CONTAINERIZATION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
AMPEV13X06		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

### Course Objectives:

- To build scalable web applications using Angular
- To import and export functionalities of modules using Angular
- To create reusable Ui components using React
- To manage state of the application more efficiently using React Hook
- To containerize the applications using Docker and Kubernetes

#### UNIT I- ANGULAR V 12

**6**

Introduction to Angular- Typescript (Arrays, Functions, classes) -JS vsTS - Angular CLI Installation- Components - Data Binding - Routing on Angular - Directives

#### UNIT II- ANGULAR MODULES AND MATERIAL

**6**

Angular Modules-HTTP client ,Forms Module-Angular Service Files-Dependency Injection- Angular Material - Connecting Angular with Back End

#### UNIT III - REACT V 18

**6**

Introduction to React- Setting development environment-create app - JSX syntax -properties and states - components - React routing - API request

#### UNIT IV- REACT HOOKS

**6**

React Hooks-useState-useEffect-useCallback-useMemo-useContext-useReducer- Introduction to React Native

#### UNIT V- CONTAINERIZATION

**6**

Introduction to Image and Container-Docker-Containers-DockerImages,Dockerfile,Docker Network - Docker Compose - Kubernetes

**Theory: 30PERIODS**

### PRACTICAL EXERCISES:

- 1.Project- Create an angular app with n components and add routing
- 2.Project-Add functionalities, validation and database with above components
- 3.Project- Create Login System using React
- 4.Project-Create Flight Management system

**Practical: 30 PERIODS**

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by Industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

**OUTCOMES:** Upon completion of the course, students will be able to:

**CO1 :** Build scalable web applications using Angular

**CO2:** Import and export functionalities of modules using Angular

**C03:** Create reusable UI components using React

**C04:** Manage state of the application more efficiently using React Hook

**C05:** Containerize the applications using Docker and Kubernetes

**TEXT BOOKS:**

1. NateMurray,FelipeCouro,AriLerner,CarlosTaborda,“TheNgbook—The CompleteBook on Angular”
2. TheRoadtoReact,RobinWieruch,2023.
3. TheDockerBook:Containerizationisthenewvirtualization,JamesTurnbull,2014.
4. heKubernetesBook,NigelPoulton,2023.

**ONLINERESOURCES:**

1. <https://angular.io/docs>
2. <https://react.dev/>
3. <https://react.dev/reference/react>
4. <https://docs.docker.com/>
5. <https://kubernetes.io/docs/home/>

**TOTAL: 60 PERIODS**

Course Code	MIDDLE TIRE TECHNOLOGIES	L	T	P	C
AMPEV13X07		2	0	2	3

### COURSE OBJECTIVES:

- To study the set of services that a middleware system constitutes of.
- To understand how middleware facilitates the development of distributed applications in heterogeneous environments
- To study how it helps to incorporate application portability, distributed application component interoperability and integration.
- To learn the object oriented middleware basics through the example of the following CORBA objects.
- To understand the basics of Web services that is the most oft-used middleware technique

### UNIT I CLIENT/ SERVER CONCEPTS 6

Client – Server – File Server, Database server, Group server, Object server, Web server .Middleware – General middleware – Service specific middleware. Client / Server Building blocks – RPC – Messaging – Peer – to- Peer.

### UNIT II EJB ARCHITECTURE 6

EJB – EJB Architecture – Overview of EJB software architecture – View of EJB – Conversation – Building and Deploying EJBs – Roles in EJB.

### UNIT III EJB APPLICATIONS 6

EJB Session Beans – EJB entity beans – EJB clients – EJB Deployment – Building an application with EJB.

### UNIT IV CORBA 6

CORBA – Distributed Systems – Purpose – Exploring CORBA alternatives – Architecture overview – CORBA and networking model – CORBA object model – IDL – ORB – Building an application with CORBA.

### UNIT V COM 6

COM – Data types – Interfaces – Proxy and Stub – Marshalling – Implementing Server / Client – Interface Pointers – Object Creation, Invocation , Destruction – Comparison COM and CORBA – Introduction to .NET – Overview of .NET architecture – Marshalling – Remoting.

**Theory: 30 Periods**

### SAMPLE LIST OF EXPERIMENTS

1. Dynamic Mechanical Analysis
2. Tribometer Testing
3. Rheometry
4. Accelerated Aging Tests

5. Recent advances in MTT Laboratory Experiments

**PRACTICAL : 30 PERIODS**

**COURSE OUTCOMES:**

**On completion of this course, the students will be able to:**

- C01** Understanding the basic concepts of web application security and the need for it
- C02** Be acquainted with the process for secure development and deployment of web applications
- C03** Acquire the skill to design and develop Secure Web Applications that use Secure APIs
- C04** Be able to get the importance of carrying out vulnerability assessment and penetration testing
- C05** Acquire the skill to think like a hacker and to use hackers tool sets

**TEXTBOOKS:**

1. Robert Orfali, Dan Harkey and Jeri Edwards, "The Essential Client/Server Survival Guide", Galgotia Publications Pvt. Ltd., 2002. (Unit 1)
2. Tom Valesky,"Enterprise Java Beans",Pearson Education, 2002.(Unit 2 & 3)
3. Jason Pritchard,"COM and CORBA side by side", Addison Wesley,2000 (Unit 4 & 5)
4. Jesse Liberty, "Programming C#", 2nd Edition, O'Reilly Press, 2002. (Unit 5)

**REFERENCES:**

1. Mowbray,"Inside CORBA", Pearson Education, 2002.
2. Jeremy Rosenberger," Teach yourself CORBA in 14 days", Tec media, 2000

**TOTAL: 60 PERIODS**

Course Code	<b>WEB APPLICATION SECURITY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV13X08</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

### **COURSE OBJECTIVES:**

- To understand the fundamentals of web application security
- To focus on wide aspects of secure development and deployment of web applications
- To learn how to build secure APIs
- To learn the basics of vulnerability assessment and penetration testing
- To get an insight about Hacking techniques and Tools

### **UNIT I FUNDAMENTALS OF WEB APPLICATION SECURITY 6**

The history of Software Security-Recognizing Web Application Security Threats, Web Application Security, Authentication and Authorization, Secure Socket layer, Transport layer Security, Session Management-Input Validation

### **UNIT II SECURE DEVELOPMENT AND DEPLOYMENT 6**

Web Applications Security - Security Testing, Security Incident Response Planning, The Microsoft Security Development Lifecycle (SDL), OWASP Comprehensive Lightweight Application Security Process (CLASP), The Software Assurance Maturity Model (SAMM)

### **UNIT III SECURE API DEVELOPMENT 6**

API Security- Session Cookies, Token Based Authentication, Securing Natter APIs: Addressing threats with Security Controls, Rate Limiting for Availability, Encryption, Audit logging, Securing service-to-service APIs: API Keys , OAuth2, Securing Microservice APIs: Service Mesh, Locking Down Network Connections, Securing Incoming Requests.

### **UNIT IV VULNERABILITY ASSESSMENT AND PENETRATION TESTING 6**

Vulnerability Assessment Lifecycle, Vulnerability Assessment Tools: Cloud-based vulnerability scanners, Host-based vulnerability scanners, Network-based vulnerability scanners, Database-based vulnerability scanners, Types of Penetration Tests: External Testing, Web Application Testing, Internal Penetration Testing, SSID or Wireless Testing, Mobile Application Testing.

### **UNIT V HACKING TECHNIQUES AND TOOLS 6**

Social Engineering, Injection, Cross-Site Scripting(XSS), Broken Authentication and Session Management, Cross-Site Request Forgery, Security Misconfiguration, Insecure Cryptographic Storage, Failure to Restrict URL Access, Tools: Comodo, OpenVAS, Nexpose, Nikto, Burp Suite, etc.

**Theory:30 PERIODS**

### **SAMPLE LIST OF EXPERIMENTS**

1. Install wireshark and explore the various protocols
  - a. Analyze the difference between HTTP vs HTTPS
  - b. Analyze the various security mechanisms embedded with different protocols.
2. Identify the vulnerabilities using OWASP ZAP tool
3. Create simple REST API using python for following operation

- a. GET
  - b. PUSH
  - c. POST
  - d. DELETE
4. Install Burp Suite to do following vulnerabilities:
- b. SQL injection
    - a. cross-site scripting (XSS)
5. Attack the website using Social Engineering method

**PRACTICAL : 30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Understanding the basic concepts of web application security and the need for it
- C02** Be acquainted with the process for secure development and deployment of web applications
- C03** Acquire the skill to design and develop Secure Web Applications that use Secure APIs
- C04** Be able to get the importance of carrying out vulnerability assessment and penetration testing
- C05** Acquire the skill to think like a hacker and to use hackers tool sets

**TEXT BOOKS:**

1. Andrew Hoffman, Web Application Security: Exploitation and Countermeasures for Modern Web Applications, First Edition, 2020, O'Reilly Media, Inc.
2. Bryan Sullivan, Vincent Liu, Web Application Security: A Beginners Guide, 2012, The McGraw-Hill Companies.
3. Neil Madden, API Security in Action, 2020, Manning Publications Co., NY, USA.

**REFERENCES:**

5. Allen Harper, Shon Harris, Jonathan Ness, Chris Eagle, Gideon Lenkey, and Terron Williams Grey Hat Hacking: The Ethical Hacker's Handbook, Third Edition, 2011, The McGraw-Hill Companies.

**ToTal : 60 PERIODS**

## Vertical 2: SOFTWARE TECHNOLOGIES

Course Code	<b>SOFTWARE ENGINEERING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV23X01</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

### COURSE OBJECTIVES:

- To understand Software Engineering Life cycle Models
- To Perform software requirements analysis
- To gain knowledge of the System Analysis and Design concepts using UML.
- To understand software testing and maintenance approaches
- To work on project management scheduling using DevOps

### UNIT I SOFTWARE PROCESS AND AGILE DEVELOPMENT 6

Introduction to Software Engineering, Software Process, Perspective and Specialized Process Models –Introduction to Agility –Agile process - Extreme programming- XP Process-CaseStudy.

### UNIT II REQUIREMENTS ANALYSIS AND SPECIFICATION 6

Requirement analysis and specification – Requirements gathering and analysis – Functional and Non Functional requirements – Software Requirement Specification – Formal system specification – Finite State Machines – Petrinets – Object modelling using UML – Use case Model–Class diagrams– Interaction diagrams–Activity diagrams–Functional modelling–DataFlowDiagram–CASE TOOLS.

### UNIT III SOFTWARE DESIGN 6

Software design – Design process – Design concepts – Coupling – Cohesion – Functional independence – Design patterns – Model-view-controller – Publish-subscribe – Adapter –Command – Strategy – Observer – Proxy – Facade – Architectural styles – Layered - Client Server -Tiered-Pipe and filter-User interface design-Case Study.

### UNIT IV SOFTWARE TESTING AND MAINTENANCE 6

Testing–Unit testing–Black box testing–White box testing–Integration and System testing–Regression testing–Debugging–Program analysis–Symbolic execution–Model Checking–Case Study – Release Management

### UNIT V PROJECT MANAGEMENT 6

Software Project Management-Software Configuration Management-Project Scheduling-DevOps: Motivation-Cloud as a platform - Operations-Deployment pipeline: Overall Architecture Building and Testing-Deployment-Tools-CaseStudy

**NUMBER OF THEORY PERIODS: 30**

### List of Practical Experiments:

1. Identify a software system that needs to be developed.
2. Document the Software Requirements Specification (SRS) for the identified system.
3. Identify use cases and develop the Use Case model.
4. Identify the conceptual classes and develop a Domain Model and also derive a Class Diagram from that.
5. Using the identified scenarios, find the interaction between objects and represent them **using**

## **UML Sequence and Collaboration Diagrams**

6. Draw relevant State Chart and Activity Diagrams for the same system.
7. Implement the system as per the detailed design
8. Test the software system for all the scenarios identified as per the use case diagram
9. Improve the reusability and maintainability of the software system by applying appropriate design patterns.
10. Implement the modified system and test it for various scenarios.

### **SUGGESTED DOMAINS FOR MINI-PROJECT:**

1. Passport automation system.
2. Book bank
3. Exam registration
4. Stock maintenance system.
5. Online course reservation system
6. Airline/Railway reservation system
7. Software personnel management system
8. Credit card processing
9. e-book management system
10. Recruitment system
11. Foreign trading system
12. Conference management system
13. BPO management system
14. Library management system
15. Student information system

**NUMBER OF PRACTICAL PERIODS: 30**

### **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Compare various Software Development Life cycle Models
- C02** Evaluate project management approaches as well as cost and schedule
- C03** Perform formal analysis on specifications.
- C04** Use UML diagrams for analysis and design.
- C05** Architect and design using architectural styles and design patterns, and test the system

**TEXTBOOKS:**

1. Bernd Bruegge and Allen H. Dutoit, "Object-Oriented Software Engineering: Using UML, Patterns and Java", Third Edition, Pearson Education, 2009.
2. Roger S. Pressman, Object-Oriented Software Engineering: An Agile Unified Methodology, First Edition, McGraw-Hill International Edition, 2014.

3. Len Bass, Ingo Weber and Liming Zhu, "DevOps: A Software Architect's Perspective", Pearson Education, 2016
4. Rajib Mall, Fundamentals of Software Engineering, 3rd edition, PHI Learning Pvt. Ltd., 2009.
5. Stephen Schach, Object-Oriented and Classical Software Engineering, 8th ed, McGraw-Hill

**TOTAL NUMBER OF PERIODS: 60**

Course Code	<b>SOFTWARE TESTING AND AUTOMATION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV23X02</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To understand the basics of software testing
- To learn how to do the testing and planning effectively
- To build test cases and execute them
- To focus on wide aspects of testing and understanding multiple facets of testing
- To get an insight about test automation and the tools used for test automation

**UNIT I FOUNDATIONS OF SOFTWARE TESTING 6**

Why do we test Software? Black-Box Testing and White-Box Testing, Software Testing Life Cycle, V-model of Software Testing, Program Correctness and Verification, Reliability versus Safety, Failures, Errors and Faults (Defects), Software Testing Principles, Program Inspections, Stages of Testing: Unit Testing, Integration Testing, System Testing

**UNIT II TEST PLANNING 6**

The Goal of Test Planning, High Level Expectations, Intergroup Responsibilities, Test Phases, Test Strategy, Resource Requirements, Tester Assignments, Test Schedule, Test Cases, Bug Reporting, Metrics and Statistics.

**UNIT III TEST DESIGN AND EXECUTION 6**

Test Objective Identification, Test Design Factors, Requirement identification, Testable Requirements, Modeling a Test Design Process, Modeling Test Results, Boundary Value Testing, Equivalence Class Testing, Path Testing, Data Flow Testing, Test Design Preparedness Metrics, Test Case Design Effectiveness, Model-Driven Test Design, Test Procedures, Test Case Organization and Tracking, Bug Reporting, Bug Life Cycle

**UNIT IV ADVANCED TESTING CONCEPTS 6**

Performance Testing: Load Testing, Stress Testing, Volume Testing, Fail-Over Testing, Recovery Testing, Configuration Testing, Compatibility Testing, Usability Testing, Testing the Documentation, Security testing, Testing in the Agile Environment, Testing Web and Mobile Applications.

**UNIT V TEST AUTOMATION AND TOOLS 6**

Automated Software Testing, Automate Testing of Web Applications, Selenium: Introducing Web Driver and Web Elements, Locating Web Elements, Actions on Web Elements, Different Web Drivers, Understanding Web Driver Events, Testing: Understanding Testing.xml, Adding Classes, Packages, Methods to Test, Test Reports.

**Theory: 30 Periods**

**SAMPLE LIST OF EXPERIMENTS**

1. Develop the test plan for testing an e-commerce web/mobile application (www.amazon.in).
2. Design the test cases for testing the e-commerce application
3. Test the e-commerce application and report the defects in it.
4. Develop the test plan and design the test cases for an inventory control system.
5. Execute the test cases against a client server or desktop application and identify the defects.

6. Test the performance of the e-commerce application.
7. Automate the testing of e-commerce applications using Selenium.
8. Integrate TestNG with the above test automation.
9. Mini Project:
  - a) Build a data-driven framework using Selenium and TestNG
  - b) Build Page object Model using Selenium and TestNG
  - c) Build BDD framework with Selenium, TestNG and Cucumber

**Practical: 30 Periods**

**COURSE OUTCOMES:**

**On completion of this course, the students will be able to:**

- C01** Understand the basic concepts of software testing and the need for software testing
- C02** Understand the basic concepts of software testing and the need for software testing
- C03** Design effective test cases that can uncover critical defects in the application
- C04** Carry out advanced types of testing
- C05** Carry out advanced types of testing

**TEXTBOOKS:**

1. Yogesh Singh, "Software Testing", Cambridge University Press, 2012
2. Unmesh Gundecha, Satya Avasarala, "Selenium WebDriver 3 Practical Guide" - Second Edition 2018

**REFERENCES:**

**Total: 60 Periods**

Course Code	<b>AGILE METHODOLOGIES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV23X03</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To provide students with a theoretical as well as practical understanding of agile software development practices and how small teams can apply them to create high-quality software.
- To provide a good understanding of software design and a set of software technologies and APIs.
- To do a detailed examination and demonstration of Agile development and testing techniques.
- To understand the benefits and pitfalls of working in an Agile team.
- To understand Agile development and testing.

**UNIT I AGILE METHODOLOGY 6**

Theories for Agile Management – Agile Software Development – Traditional Model vs. Agile Model - Classification of Agile Methods – Agile Manifesto and Principles – Agile Project Management – Agile Team Interactions – Ethics in Agile Teams - Agility in Design, Testing – Agile Documentations.

**UNIT II AGILE PROCESSES 6**

Lean Production - SCRUM, Crystal, Feature Driven Development- Adaptive Software Development - Extreme Programming: Method Overview – Lifecycle – Work Products, Roles and Practices.

**UNIT III AGILITY AND KNOWLEDGE MANAGEMENT 6**

Agile Information Systems – Agile Decision Making - Earl\_S Schools of KM – Institutional Knowledge Evolution Cycle – Development, Acquisition, Refinement, Distribution, Deployment , Leveraging – KM in Software Engineering – Managing Software Knowledge – Challenges of Migrating to Agile Methodologies .

**UNIT IV AGILITY AND REQUIREMENTS ENGINEERING 6**

Impact of Agile Processes in RE–Current Agile Practices – Variance – Overview of RE Using Agile – Managing Unstable Requirements – Requirements Elicitation – Agile Requirements Abstraction Model – Requirements Management in Agile Environment, Agile Requirements Prioritization – Agile Requirements Modeling and Generation – Concurrency in Agile Requirements Generation.

**UNIT V AGILITY AND QUALITY ASSURANCE 6**

Agile Product Development – Agile Metrics – Feature Driven Development (FDD) – Financial and Production Metrics in FDD – Agile Approach to Quality Assurance - Test Driven Development – Agile Approach in Global Software Development.

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Understand the background and driving forces for taking an Agile Approach to Software development.
2. Build out a backlog and user stories.
3. To study automated build tool.
4. To study version control tool.

5. To study Continuous Integration tool.
6. Apply Design principle and Refactoring to achieve agility.
7. Perform Testing activities within an agile project.

**Practicals: 30 Periods**

**COURSE OUTCOMES:**

**On completion of this course, the students will be able to:**

- C01** Realize the importance of interacting with business stakeholders in determining the requirements for a software system
- C02** Perform iterative software development processes: how to plan them, how to execute them
- C03** Point out the impact of social aspects on software development success.
- C04** Develop techniques and tools for improving team collaboration and software quality
- C05** Perform Software process improvement as an ongoing task for development teams.

**TEXTBOOKS:**

1. David J. Anderson and Eli Schragenheim, –Agile Management for Software Engineering: Applying the Theory of Constraints for Business Results, Prentice Hall, 2003.
2. Hazza and Dubinsky, –Agile Software Engineering, Series: Undergraduate Topics in Computer Science, Springer, 2009.

**REFERENCES:**

1. Craig Larman, –Agile and Iterative Development: A Manager's Guide, Addison-Wesley, 2004.
2. Kevin C. Desouza, –Agile Information Systems: Conceptualization, Construction, and Management, Butterworth-Heinemann, 2007.

**Total: 60 Periods**

Course Code	<b>SOFTWARE USER INTERFACE DESIGN &amp; ANALYSIS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV23X04</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To understand the difference between UI and UX
- To learn user-centered design principles.
- To understand interaction design principles
- To learn to create wireframes and prototypes
- To explore advanced topics like responsive design.

**Unit 1: Introduction to UI/UX Fundamentals 6**

Introduction to UI/UX concepts- Definition and differentiation of UI and UX- The Impact of UI/UX on Software Success- Understanding user expectations and behavior- User-Centric Design Principles- Importance of user-centric design- The Impact on User Satisfaction- Understanding user expectations and preferences.

**Unit 2: Design Principles and Methodologies 6**

User-centered design principles- Definition and core principles of UCD- Historical context and evolution of UCD in design- Iterative Design Process- Usability heuristics- Definition and significance of usability heuristics -Application of Heuristics in Evaluation-

**Unit 3: Interaction and Visual Design 6**

Principles of interaction design- Definition and significance of interaction design principles- Usability and Learn ability- Fundamentals of visual design- Introduction to Visual Design- The psychology of visual elements and their impact on user perception- Color Theory and Application

**Unit 4: Prototyping and Usability Testing 6**

Wire framing and prototyping- Definition and significance of wire framing and prototyping- Overview of their roles in the design process - Principles of Effective Wireframing- Usability testing methodologies

**Unit 5: Advanced Topics - Responsive Design, Accessibility, and Guidelines 6**

Responsive design principles- Definition and significance of responsive design - Principles of creating layouts with fluid grids - Techniques for making images responsive -Accessibility in UI design- UI guidelines and standards

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Conduct heuristic evaluations
2. Apply user-centered design to a simple project.
3. Design interactive elements
4. Create visually appealing UI components
5. Conduct a usability test on a prototype
6. Implement responsive design in a project
7. Design an accessible user interface

**Practicals: 30 Periods**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Design effective and user-centered interfaces.
- C02** Evaluate and improve user interfaces using usability heuristics.
- C03** Apply visual design principles for aesthetically pleasing interfaces.
- C04** Create prototypes and conduct usability tests.
- C05** Implement responsive design, ensure accessibility, and adhere to UI guidelines.

**TEXT BOOKS:**

1. " Don't Make Me Think" by Steve Krug
2. "The Design of Everyday Things" by Don Norman
3. "Seductive Interaction Design" by Stephen Anderson

**REFERENCES:**

1. "Designing Interfaces" by Jenifer Tidwell
2. "About Face: The Essentials of Interaction Design" by Alan Cooper
3. "Universal Principles of Design" by William Lidwell, Kritina Holden, and Jill Butler

**Total: 60 Periods**

Course Code	<b>SOFTWARE ARCHITECTURE AND DESIGN PATTERNS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV23X05</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To define software architecture and its role in the development process
- To understand the process of making architectural decisions.
- To learn when and how to apply specific design patterns
- To understand the principles and challenges of micro services architecture
- To explore current trends and emerging paradigms in software architecture

**Unit 1: Introduction to Software Architecture 6**

Introduction to Software Architecture- Definition and significance of software architecture- Architectural Styles and Patterns - Overview of different architectural styles- Introduction to common design patterns.

**Unit 2: Architectural Decision Making 6**

Architectural Decision Process- Steps involved in making architectural decisions- Role of stakeholders in the decision making process- Trade-offs in Software Design- Evaluating trade- offs in terms of performance, scalability, and maintainability- Analyzing the impact of non-functional requirements on architecture.

**Unit 3: Design Patterns in Depth 6**

Creational Design Patterns- Singleton, Factory Method, Abstract Factory patterns- When and how to use creational design patterns- Structural and Behavioral Design Patterns- Composite, Observer, Strategy patterns- Real-world examples illustrating the application of structural and behavioral design patterns.

**Unit 4: Advanced Topics in Software Architecture 6**

Micro services Architecture-Principles of micro services architecture-Case studies on successful implementations-Event-Driven Architecture-Understanding events and event-driven systems- Implementing event-driven architectures in software systems.

**Unit 5: Emerging Trends and Future Directions 6**

Current Trends in Software Architecture-Overview of current trends, including serverless architecture, edge computing, etc-Case studies on how industry leaders are adapting to new trends- Continuous Learning and Professional Development-Importance of continuous learning in the field of software architecture-Resources, communities, and practices for staying updated and relevant.

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Analyze real-world applications and identify their architectural styles.
2. Discuss the impact of architectural decisions on system properties.
3. Analyze a complex scenario and make architectural decisions as a group
4. Present and defend the chosen architecture.
5. Conduct performance testing on a software system.

6. Hands-on coding session: Applying design patterns to a sample project
7. Identify areas for refactoring in existing code
8. Designing and implementing a micro services-based system
9. Testing and troubleshooting micro services interactions.

**Practicals: 30 Periods**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Understand and Apply Software Architecture Concepts.
- C02** Understand the architectural decision-making process.
- C03** Apply design patterns to new projects and re-factor existing code.
- C04** Understand micro services architecture and its advantages and challenges.
- C05** Explore emerging trends in software architecture.

**TEXT BOOKS:**

1. "Design Patterns: Elements of Reusable Object-Oriented Software" by Erich Gamma, Richard Helm, Ralph Johnson, and John Vlissides
- 2."Clean Architecture: A Craftsman's Guide to Software Structure and Design" by Robert C. Martin

**REFERENCES:**

- 1."Microservices Patterns: With Examples in Java" by Chris Richardson
- 2."Building Micro services" by Sam Newman
- 3."Enterprise Integration Patterns: Designing, Building, and Deploying Messaging Solutions" by Gregor Hohpe and Bobby Woolf

**Total: 60 Periods**

Course Code	<b>SOFTWARE QUALITY MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV23X06</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To define software quality and its significance in software development.
- To define software testing and its role in the software development life cycle.
- To learn software quality metrics and their significance
- To understand software process improvement (SPI) and its goals..
- To explore current trends and emerging practices in software quality management.

**Unit 1: Introduction to Software Quality Management 6**

Overview of Software Quality- Definition and dimensions of software quality- Case studies on the consequences of poor software quality- Quality Management Principles- Evidence-Based Decision Making- Relationship Management- System Approach to Management- Factual Approach to Decision Making- Mutually Beneficial Supplier Relationships- Introduction to quality management frameworks (e.g., ISO 9001)

**Unit 2: Software Testing Fundamentals 6**

Basics of Software Testing-Importance of software testing-Overview of testing levels and types-Test Planning and Strategy-Objective and Scope-Test Levels and Types-Test Deliverables-Resource Planning-Schedule and Timeline-Risk Assessment and Mitigation-Test Environment-Entry and Exit Criteria-Testing Tools and Techniques-Test Execution Strategy-Best Practices for Test Planning and Strategy

**Unit 3: Software Quality Metrics and Measurement 6**

Introduction to Quality Metrics-Defining key quality metrics-Relationship between metrics and project objectives-Measurement and Analysis-Principles of effective measurement-analysis in software quality-Informed decisions-Drive continuous improvement

**Unit 4: Software Process Improvement 6**

Introduction to Process Improvement-Basics of Software Process Improvement-Importance and benefits of SPI-Overview of common SPI models (e.g., CMMI, Six Sigma)-Process Models and Frameworks-Tailoring and Implementing Processes-Adapting process models-Best practices for implementing and sustaining process improvements

**Unit 5: Emerging Trends in Software Quality Management 6**

Current Trends in Software Quality -Overview of current trends-test automation-AI in testing-importance of staying updated on industry trends-Continuous Learning and Professional Development-Importance of continuous learning-Resources, communities, and practices for staying updated and relevant.

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Creating a basic Software Development Life Cycle (SDLC) model.
2. Building a Quality Assurance Plan for a sample project.
3. Writing and executing basic test cases for a simple application
4. Executing test cases manually on a sample application..
5. Introduction to test automation tools – setting up and running basic automated tests.

6. Simulating the defect life cycle using a bug tracking tool.
7. Root cause analysis and corrective action for identified defects.
8. Conducting performance tests on a web application
9. Exploring basic security testing techniques on a sample system.

**Practicals:30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Define and Apply Software Quality Management Concepts
- C02** Understand and Apply Software Testing Fundamentals.
- C03** Apply Quality Metrics and Measurement.
- C04** Tailor and implement processes using different models and frameworks.
- C05** Develop a plan for continuous learning and professional development.

**TEXT BOOKS:**

1. "Foundations of Software Testing" by Dorothy Graham and Erik Van Veenendaal
2. "Software Engineering: A Practitioner's Approach" by Roger S. Pressman

**REFERENCES:**

1. "Quality Software Management: Systems Thinking" by Gerald M. Weinberg
2. "Improving Software Organizations: From Principles to Practice" by Louis Poulin

**Total:60 Periods**

Course Code	<b>SOFTWARE PROJECT MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV23X07</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To understand the Software Project Planning and Evaluation techniques.
- To plan and manage projects at each stage of the software development life cycle (SDLC).
- To learn about the activity planning and risk management principles.
- To manage software projects and control software deliverables.
- To develop skills to manage the various phases involved in project management and people management.

**UNIT I PROJECT EVALUATION AND PROJECT PLANNING 6**

Importance of Software Project Management – Activities - Methodologies – Categorization of Software Projects – Setting objectives – Management Principles – Management Control – Project portfolio Management – Cost-benefit evaluation technology – Risk evaluation .

**UNIT II PROJECT LIFE CYCLE AND EFFORT ESTIMATION 6**

Software process and Process Models – Choice of Process models - Rapid Application development – Agile methods – Dynamic System Development Method – Extreme Programming– Managing interactive processes – Basics of Software estimation – Effort and Cost estimation techniques – COSMIC Full function points - COCOMO II.

**UNIT III ACTIVITY PLANNING AND RISK MANAGEMENT 6**

Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Formulating Network Model – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Risk Planning –Risk Management – – PERT technique – Monte Carlo simulation – Resource Allocation.

**UNIT IV PROJECT MANAGEMENT AND CONTROL 6**

Framework for Management and Control – Collection of data – Visualizing progress – Cost monitoring – Earned Value Analysis – Prioritizing Monitoring – Project tracking – Change Control – Software Configuration Management.

**UNIT V STAFFING IN SOFTWARE PROJECTS 6**

Managing people – Organizational behavior – Best methods of staff selection – Motivation – The Oldham – Hackman job characteristic model – Stress – Health and Safety – Ethical and Professional concerns – Working in teams – Decision making – Organizational structures – Dispersed and Virtual teams.

**Theory:30 PERIODS**

**List of Experiments**

- Setting up project management tools (e.g., Jira, Trello) and introducing a sample project.
2. Creating a project plan with milestones, tasks, and resource allocation.
3. Conducting a project kickoff meeting and defining project scope.
4. Developing a Work Breakdown Structure (WBS) for a given project.
5. Identifying and analyzing project risks.

6. Developing a quality management plan and implementing quality control measures.
7. Assigning tasks and responsibilities using project management tools.
8. Using collaboration tools for effective communication and document sharing.
9. Implementing Agile methodologies for project management.

**Practicals:30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Understand Project Management principles while developing software.
- C02** Gain extensive knowledge about the basic project management concepts, framework and the process models.
- C03** Obtain adequate knowledge about software process models and software effort estimation techniques.
- C04** Estimate the risks involved in various project activities
- C05** Define the checkpoints, project reporting structure, project progress and tracking mechanisms using project management principles

**TEXT BOOKS:**

1. Bob Hughes, Mike Cotterell and Rajib Mall: Software Project Management – Fifth Edition, Tata McGraw Hill, New Delhi, 2012.

**REFERENCES:**

1. Robert K. Wysocki –Effective Software Project Management – Wiley Publication, 2011.
2. Walker Royce: –Software Project Management- Addison-Wesley, 1998. 3. Gopaldaswamy Ramesh, –Managing Global Software Projects – McGraw Hill Education (India), Fourteenth Reprint 2013.

**Total:60 PERIODS**

Course Code	<b>HUMAN-COMPUTER INTERACTION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV23X08</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

## **COURSE OBJECTIVES**

- To learn the foundations of Human Computer Interaction.
- To become familiar with the design technologies for individuals and persons with disabilities.
- To be aware of mobile HCI.
- To learn the guidelines for user interface.
- Learn to develop meaningful user interface.

### **UNIT I FOUNDATIONS OF HCI**

**6**

The Human: I/O channels – Memory – Reasoning and problem solving; The Computer: Devices – Memory – processing and networks; Interaction: Models – frameworks – Ergonomics – styles – elements – interactivity- Paradigms.

### **UNIT II DESIGN & SOFTWARE PROCESS**

**6**

Interactive Design: Basics – process – scenarios – navigation – screen design – Iteration and prototyping. HCI in software process: Software life cycle – usability engineering – Prototyping in practice – design rationale. Design rules: principles, standards, guidelines, rules.

### **UNIT III MODELS AND THEORIES**

**6**

HCI Models: Cognitive models: Socio-Organizational issues and stakeholder requirements – Communication and collaboration models-Hypertext, Multimedia and WWW.

### **UNIT IV MOBILE HCI**

**6**

Mobile Ecosystem: Platforms, Application frameworks- Types of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements of Mobile Design, Tools.

### **UNIT V WEB INTERFACE DESIGN**

**6**

Designing Web Interfaces – Drag & Drop, Direct Selection, Contextual Tools, Overlays, Inlays and Virtual Pages, Process Flow .

**Theory:30 PERIODS**

## **SAMPLE LIST OF EXPERIMENTS**

1. Setting up essential tools and resources for HCI design
2. Understanding the basics of user experience (UX) and user interface (UI) design.
3. Conducting user interviews and creating user personas.
4. Analyzing user behavior through usability testing and heuristic evaluation.
5. Creating paper prototypes for a given scenario.
6. Conducting usability tests on digital prototypes.
7. Analyzing usability testing results and making design refinements.
8. Applying interaction design principles to improve user interfaces.

9. Implementing responsive design for multiple devices. 10. Evaluating and improving accessibility in user interfaces.

**Practicals:30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Design effective dialog for HCI
- C02** Design effective HCI for individuals and persons with disabilities
- C03** Assess the importance of user feedback
- C04** Explain the HCI implications for designing multimedia/ ecommerce/ e-learning Web sites.
- C05** Develop meaningful user interface.

**TEXT BOOKS:**

1. Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale, —Human Computer Interaction, 3rd Edition, Pearson Education, 2004
2. Brian Fling, —Mobile Design and Development, First Edition, O'Reilly Media Inc., 2009
3. Bill Scott and Theresa Neil, —Designing Web Interfaces, First Edition, O'Reilly, 2009.

**Total:60 PERIODS**

### Vertical 3: CYBER SECURITY

Course Code	<b>CRYPTOGRAPHY &amp; INFORMATION SECURITY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV33X01</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

#### **COURSE OBJECTIVES:**

- To provide deeper understanding into cryptography, its application to network security, threats/vulnerabilities to networks and countermeasures.
- To explain various approaches to Encryption techniques, strengths of Traffic Confidentiality, Message Authentication Codes
- To familiarize Digital Signature Standard and provide solutions for their issues.
- To familiarize with cryptographic techniques for secure (confidential) communication of two parties over an insecure (public) channel; verification of the authenticity of the source of a message
- To familiarize Authentication service , electronic mail security and web security

#### **UNIT - I INTRODUCTION**

**6**

Security trends, The OSI Security Architecture, Security Attacks, Security Services and Security Mechanisms, A model for Network security. CLASSICAL ENCRYPTION TECHNIQUES: Symmetric Cipher Modes, Substitute Techniques, Transposition Techniques, Rotor Machines, Stenography.

#### **UNIT - II BLOCK CIPHER AND DATA ENCRYPTION STANDARDS**

**6**

Block Cipher Principles, Data Encryption Standards, the Strength of DES, Differential and Linear Crypt Analysis, Block Cipher Design Principles. ADVANCED ENCRYPTION STANDARDS: Evaluation Criteria for AES, the AES Cipher. MORE ON SYMMETRIC CIPHERS: Multiple Encryption, Triple DES, Block Cipher Modes of Operation, Stream Cipher and RC4. INTRODUCTION TO NUMBER THEORY: Prime Numbers, Fermat's and Euler's Theorem, Testing for Primality, The Chinese Remainder Theorem, Discrete logarithms

#### **UNIT - III PUBLIC KEY CRYPTOGRAPHY AND RSA**

**6**

Principles Public key crypto Systems, Diffie Hellman Key Exchange, the RSA algorithm, Key Management, Elliptic Curve Arithmetic, Elliptic Curve Cryptography. MESSAGE AUTHENTICATION AND HASH FUNCTIONS: Authentication Requirement, Authentication Function, Message Authentication Code, Hash Function, Security of Hash Function and MACs. HASH AND MAC ALGORITHM: Secure Hash Algorithm, Whirlpool, HMAC, CMAC. DIGITAL SIGNATURE: Digital Signature, Authentication Protocol, Digital Signature Standard.

#### **UNIT - IV AUTHENTICATION APPLICATION**

**6**

Kerberos, X.509 Authentication Service, Public Key Infrastructure. EMAIL SECURITY: Pretty Good Privacy (PGP) and S/MIME. IP SECURITY: Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations and Key Management.

#### **UNIT - V WEB SECURITY**

**6**

Requirements, Secure Socket Layer (SSL) and Transport Layer Security (TLS), Secure Electronic Transaction (SET), Intruders, Viruses and related threats. FIREWALL: Firewall Design principles, Trusted Systems.

**Theory:30 PERIODS**

## **SAMPLE LIST OF EXPERIMENTS**

1. Symmetric Key Encryption
2. Asymmetric Key Cryptography
3. Secure Communication Protocols
4. Cryptographic Applications
5. Post-quantum Cryptography
6. Cryptographic Attacks and Countermeasures
7. Cryptography in IoT
8. Quantum-Safe Cryptography

**Practicals:30 PERIODS**

## **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Identify basic security attacks and services
- C02** Use symmetric and asymmetric key algorithms for cryptography
- C03** Design a security solution for a given application
- C04** Analyze Key Management techniques and importance of number Theory with Message Authentication Codes and Hash Functions work
- C05** Understanding of Authentication functions and Authentication Service and Electronic Mail Security

## **TEXT BOOKS:**

- 1 William Stallings (2006), Cryptography and Network Security: Principles and Practice, 4th edition, Pearson Education, India.
2. William Stallings (2000), Network Security Essentials (Applications and Standards), Pearson Education, India.

## **REFERENCES:**

1. Charlie Kaufman (2002), Network Security: Private Communication in a Public World, 2nd edition, Prentice Hall of India, New Delhi.
2. Atul Kahate (2008), Cryptography and Network Security, 2nd edition, Tata Mc Grawhill, India.
3. Robert Bragg, Mark Rhodes (2004), Network Security: The complete reference, Tata Mc Grawhill, India.

**Total:60 PERIODS**

Course Code	<b>SECURITY AND PRIVACY IN CLOUD</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV33X02</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To Introduce Cloud Computing terminology, definition & concepts
- To understand the security design and architectural considerations for Cloud
- To understand the Identity, Access control in Cloud
- To follow best practices for Cloud security using various design patterns
- To be able to monitor and audit cloud applications for security

**UNIT I FUNDAMENTALS OF CLOUD SECURITY CONCEPTS 6**

Overview of cloud security- Security Services - Confidentiality, Integrity, Authentication, Nonrepudiation, Access Control - Basic of cryptography - Conventional and public-key cryptography, hash functions, authentication, and digital signatures.

**UNIT II SECURITY DESIGN AND ARCHITECTURE FOR CLOUD 6**

Security design principles for Cloud Computing - Comprehensive data protection - End-to-end access control - Common attack vectors and threats - Network and Storage - Secure Isolation Strategies - Virtualization strategies - Inter-tenant network segmentation strategies - Data Protection strategies: Data retention, deletion and archiving procedures for tenant data, Encryption, Data Redaction, Tokenization, Obfuscation, PKI and Key

**UNIT III ACCESS CONTROL AND IDENTITY MANAGEMENT 6**

Access control requirements for Cloud infrastructure - User Identification - Authentication and Authorization - Roles-based Access Control - Multi-factor authentication - Single Sign-on, Identity Federation - Identity providers and service consumers - Storage and network access control options - OS Hardening and minimization - Verified and measured boot - Intruder Detection and prevention.

**UNIT IV CLOUD SECURITY DESIGN PATTERNS 6**

Introduction to Design Patterns, Cloud bursting, Geo-tagging, Secure Cloud Interfaces, Cloud Resource Access Control, Secure On-Premise Internet Access, Secure External Cloud

**UNIT V MONITORING, AUDITING AND MANAGEMENT 6**

Proactive activity monitoring - Incident Response, Monitoring for unauthorized access, malicious traffic, abuse of system privileges - Events and alerts - Auditing – Record generation, Reporting and Management, Tamper-proofing audit logs, Quality of Services, Secure Management, User management, Identity management, Security Information and Event Management

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Simulate a cloud scenario using Cloud Sim and run a scheduling algorithm not present in Cloud Sim
2. simulate resource management using cloud sim
3. simulate log forensics using cloud sim
4. simulate a secure file sharing using a cloud sim

5. Implement data anonymization techniques over the simple dataset (masking, k-anonymization, etc)
6. Implement any encryption algorithm to protect the images
7. Implement any image obfuscation mechanism
8. Implement a role-based access control mechanism in a specific scenario
9. implement an attribute-based access control mechanism based on a particular scenario
10. Develop a log monitoring system with incident management in the cloud

**Practical:30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Understand the cloud concepts and fundamentals.
- C02** Explain the security challenges in the cloud.
- C03** Define cloud policy and Identity and Access Management.
- C04** Understand various risks and audit and monitoring mechanisms in the cloud.
- C05** Define the various architectural and design considerations for security in the cloud.

**TEXT BOOKS:**

1. Raj Kumar Buyya , James Broberg, andrzejGoscinski, "Cloud Computing:", Wiley 2013
2. Dave shackleford, "Virtualization Security", SYBEX a wiley Brand 2013.
3. Mather, Kumaraswamy and Latif, "Cloud Security and Privacy", OREILLY 2011

**Total: 60 PERIODS**

Course Code	<b>WEB APPLICATION SECURITY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV33X03</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To understand the fundamentals of web application security
- To focus on wide aspects of secure development and deployment of web applications
- To learn how to build secure APIs
- To learn the basics of vulnerability assessment and penetration testing
- To get an insight about Hacking techniques and Tools

**UNIT I FUNDAMENTALS OF WEB APPLICATION SECURITY 6**

The history of Software Security-Recognizing Web Application Security Threats, Web Application Security, Authentication and Authorization, Secure Socket layer, Transport layer Security, Session Management-Input Validation

**UNIT II SECURE DEVELOPMENT AND DEPLOYMENT 6**

Web Applications Security - Security Testing, Security Incident Response Planning, The Microsoft Security Development Lifecycle (SDL), OWASP Comprehensive Lightweight Application Security Process (CLASP), The Software Assurance Maturity Model (SAMM)

**UNIT III SECURE API DEVELOPMENT 6**

API Security- Session Cookies, Token Based Authentication, Securing Natter APIs: Addressing threats with Security Controls, Rate Limiting for Availability, Encryption, Audit logging, Securing service-to-service APIs: API Keys , OAuth2, Securing Microservice APIs: Service Mesh, Locking Down Network Connections, Securing Incoming Requests.

**UNIT IV VULNERABILITY ASSESSMENT AND PENETRATION TESTING 6**

Vulnerability Assessment Lifecycle, Vulnerability Assessment Tools: Cloud-based vulnerability scanners, Host-based vulnerability scanners, Network-based vulnerability scanners, Database-based vulnerability scanners, Types of Penetration Tests: External Testing, Web Application Testing, Internal Penetration Testing, SSID or Wireless Testing, Mobile Application Testing.

**UNIT V HACKING TECHNIQUES AND TOOLS 6**

Social Engineering, Injection, Cross-Site Scripting(XSS), Broken Authentication and Session Management, Cross-Site Request Forgery, Security Misconfiguration, Insecure Cryptographic Storage, Failure to Restrict URL Access, Tools: Comodo, OpenVAS, Nexpose, Nikto, Burp Suite, etc.

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

Install wireshark and explore the various protocols

- a. Analyze the difference between HTTP vs HTTPS
- b. Analyze the various security mechanisms embedded with different protocols.
2. Identify the vulnerabilities using OWASP ZAP tool
3. Create simple REST API using python for following operation
  - GET
  - PUSH
  - POST

- DELETE
4. Install Burp Suite to do following vulnerabilities:
    - SQL injection
    - cross-site scripting (XSS)
  5. Attack the website using Social Engineering method

**Practical:30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Understanding the basic concepts of web application security and the need for it
- C02** Be acquainted with the process for secure development and deployment of web applications
- C03** Acquire the skill to design and develop Secure Web Applications that use Secure APIs
- C04** Be able to get the importance of carrying out vulnerability assessment and penetration testing
- C05** Acquire the skill to think like a hacker and to use hackers tool sets

**TEXT BOOKS:**

1. Andrew Hoffman, Web Application Security: Exploitation and Countermeasures for Modern Web Applications, First Edition, 2020, O'Reilly Media, Inc.
2. Bryan Sullivan, Vincent Liu, Web Application Security: A Beginners Guide, 2012, The McGraw-Hill Companies.
3. Neil Madden, API Security in Action, 2020, Manning Publications Co., NY, USA.

5. Allen Harper, Shon Harris, Jonathan Ness, Chris Eagle, Gideon Lenkey, and Terron Williams Grey Hat Hacking: The Ethical Hacker's Handbook, Third Edition, 2011, The McGraw-Hill Companies.

**Total:60 PERIODS**

Course Code	<b>SOCIAL NETWORK SECURITY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV33X04</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To develop semantic web related simple applications
- To explain Privacy and Security issues in Social Networking
- To explain the data extraction and mining of social networks
- To discuss the prediction of human behavior in social communities
- To describe the Access Control, Privacy and Security management of social networks

**UNIT I FUNDAMENTALS OF SOCIAL NETWORKING 6**

Introduction to Semantic Web, Limitations of current Web, Development of Semantic Web, Emergence of the Social Web, Social Network analysis, Development of Social Network Analysis, Key concepts and measures in network analysis, Historical overview of privacy and security, Major paradigms, for understanding privacy and security, Common security threats in social networks and case studies of notable security incidents.

**UNIT II SECURITY ISSUES IN SOCIAL NETWORKS 6**

Principles of secure user authentication, Multifactor authentication, Access control mechanisms and user permissions, SSL/TLS protocols for secure data transmission, End-to-end encryption in messaging apps, The evolution of privacy and security concerns with networked technologies, Contextual influences on privacy attitudes and behaviors, Anonymity in a networked world.

**UNIT III EXTRACTION AND MINING IN SOCIAL NETWORKING DATA 6**

Extracting evolution of Web Community from a Series of Web Archive, Detecting communities in social networks, Definition of community, Evaluating communities, Methods for community detection and mining, Applications of community mining algorithms, Tools for detecting communities social network infrastructures and communities, Big data and Privacy, User education and awareness , regulatory compliance.

**UNIT IV PREDICTING HUMAN BEHAVIOR AND PRIVACY ISSUES 6**

Understanding and predicting human behavior for social communities, User data Management, Inference and Distribution, Enabling new human experiences, Reality mining, Context, Awareness, Privacy in online social networks, Trust in online environment, What is Neo4j, Nodes, Relationships, Properties, Secure third-party integrations.

**UNIT V ACCESS CONTROL, PRIVACY AND IDENTITY MANAGEMENT 6**

Understand the access control requirements for Social Network, Enforcing Access Control Strategies, Authentication and Authorization, Roles-based Access Control, Host, storage and network access control options, Firewalls, Authentication, and Authorization in Social Network, Identity & Access Management, Single Sign-on, Identity Federation, Identity providers and service consumers, The role of Identity provisioning. Emerging trends in social network security.

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Design own social media application
2. Create a Network model using Neo4j

3. Read and write Data from Graph Database
4. Find “Friend of Friends” using Neo4j
5. Implement secure search in social media
6. Create a simple Security & Privacy detector

**Practical: 30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Develop semantic web related simple applications
- C02** Address Privacy and Security issues in Social Networking
- C03** Explain the data extraction and mining of social networks
- C04** Discuss the prediction of human behavior in social communities
- C05** Describe the applications of social networks

**TEXT BOOKS:**

1. Peter Mika, “Social Networks and the Semantic Web, First Edition, Springer 2007.
2. Borko Furht, “Handbook of Social Network Technologies and Application, First Edition, Springer, 2010.
3. Learning Neo4j 3.x “Second Edition By Jérôme Baton, Rik Van Bruggen, Packt publishing

**Total:60 PERIODS**

Course Code	<b>DIGITAL FORENSICS AND MALWARE ANALYSIS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV33X05</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- Learn preventive measures to safeguard digital systems and information against cyber threats
- Develop policies specific to digital crime and focusing on digital investigation
- Gain a comprehensive understanding of the methodologies, tools, and techniques used in investigating various types of cybercrimes
- Understand scope of the malware borne cyber-attacks, various malware types, and platform-specific variations of malware
- Explain the basic signs of malware infection and signs of intrusion from a security analyst's point of view

**UNIT I DIGITAL FORENSIC TECHNIQUE AND TRACES 6**

File System Analysis - Network Packet Analysis - Memory Forensics - Digital Evidence Collection - Mobile Device Forensics Techniques - Cloud Forensics - Big Data Analytics in Forensics - Incident Response and Timeline Analysis.

**UNIT II INTRODUCTION TO DIGITAL CRIME AND INVESTIGATION 6**

Digital Crime Overview - Legal and Ethical Frameworks - Digital Forensic Tools and Techniques - Incident Response Fundamentals - Digital Evidence Collection and Preservation – Cyber security Basics - Digital Investigation Methodologies - Cybercrime Trends and Emerging Threats.

**UNIT III INTERNET BASED INVESTIGATIONS 6**

Social Media Investigations - Open-Source Intelligence (OSINT) - Email and Communication Tracing - Dark Web Investigations - Online Fraud Investigations - Cyber Threat Intelligence - Digital Copyright and Intellectual Property Investigations - Online Extremism and Radicalization Investigations.

**UNIT IV INTRODUCTION TO MALWARE ANALYSIS 6**

Malware classification- types- and platform specific issues with malware- Intrusion into IT and operational network (OT) and their signs – Basics of malware detection – Intro to linux- Networks.

**UNIT V BASIC MALWARE ANALYSIS 6**

Manual Malware Infection analysis - signature-based malware detection and classification – pros and cons- and need for machine learning based techniques- Advanced Techniques Malware Analysis.

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Live Case Studies Open Source Forensic Tools
2. Disk Forensics and Data Recovery
3. Steganography
4. Key loggers
5. Network monitors
6. Flowchart management

7. Upload Malware to Virustotal - Analyze the file Lab01-02.exe - [ Refer Lab 1-2 in Textbook] - Lab01-02.exe
8. This lab uses the file Lab01-04.exe. Analyze the file Lab01-04.exe. [ Refer Lab 1-4 in Textbook] - Lab01-04.exe
9. Analyze the malware found in the file Lab05-01.dll using only IDA Pro [Refer Lab 5-1 In Textbook] - Lab05-01.exe
10. Analyze the malware found in the file Lab07-02.exe [Refer Lab 07-02 in Textbook] – Lab 07-02.exe

**Practical: 30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**CO1:**Clarify the foundational principles of digital forensics, unravelling the core concepts essential to the field.

**CO2:**Evaluate and delineate strategies for managing risks associated with digital forensic investigations.

**CO3:**Elaborate on the basic tools and techniques utilized in the investigation of various types of cybercrimes.

**CO4:**Explain and introduce malware analysis efficiently.

**CO5:**Explain basic malware analysis and demonstrate some basic techniques.

**TEXT BOOKS:**

- 1.Andre Arnes, “Digital Forensics”, Wiley, 2018.

**Total:60 PERIODS**

Course Code	<b>ETHICAL HACKING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV33X06</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To understand the basics of computer based vulnerabilities.
- To explore different foot printing, reconnaissance and scanning methods.
- To expose the enumeration and vulnerability analysis methods.
- To understand hacking options available in Web and wireless applications.
- To explore the options for network protection and perform ethical hacking to expose the vulnerabilities.

**UNIT I INTRODUCTION**

**6**

Ethical Hacking Overview - Role of Security and Penetration Testers .- Penetration-Testing Methodologies- Laws of the Land - Overview of TCP/IP- The Application Layer - The Transport Layer - The Internet Layer - IP Addressing .- Network and Computer Attacks - Malware - Protecting Against Malware Attacks.- Intruder Attacks - Addressing Physical Security

**UNIT II FOOT PRINTING, RECONNAISSANCE AND SCANNING NETWORKS**

**6**

Foot printing Concepts - Footprinting through Search Engines, Web Services, Social Networking Sites, Website, Email - Competitive Intelligence - Footprinting through Social Engineering – Foot printing Tools - Network Scanning Concepts - Port-Scanning Tools - Scanning Techniques - Scanning Beyond IDS and Firewall

**UNIT III ENUMERATION AND VULNERABILITY ANALYSIS**

**6**

Enumeration Concepts - NetBIOS Enumeration – SNMP, LDAP, NTP, SMTP and DNS Enumeration - Vulnerability Assessment Concepts - Desktop and Server OS Vulnerabilities - Windows OS Vulnerabilities - Tools for Identifying Vulnerabilities in Windows- Linux OS Vulnerabilities- Vulnerabilities of Embedded Oss

**UNIT IV SYSTEM HACKING**

**6**

Hacking Web Servers - Web Application Components- Vulnerabilities - Tools for Web Attackers and Security Testers Hacking Wireless Networks - Components of a Wireless Network – Wardriving- Wireless Hacking - Tools of the Trade .

**UNIT V NETWORK PROTECTION SYSTEMS**

**6**

Access Control Lists. - Cisco Adaptive Security Appliance Firewall - Configuration and Risk Analysis Tools for Firewalls and Routers - Intrusion Detection and Prevention Systems - NetworkBased and Host-Based IDSs and IPSs - Web Filtering - Security Incident Response Teams – Honeypots.

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Install Kali or Backtrack Linux / Metasploitable/ Windows XP
2. Practice the basics of reconnaissance.
3. Using FOCA / SearchDiggity tools, extract metadata and expanding the target list.
4. Aggregates information from public databases using online free tools like Paterva’sMaltego.

5. Information gathering using tools like Robtex.
6. Scan the target using tools like Nessus.
7. View and capture network traffic using Wireshark.
8. Automate dig for vulnerabilities and match exploits using Armitage

FOCA :<http://www.informatica64.com/foca.aspx>. 134

Nessus :<http://www.tenable.com/products/nessus>.

Wireshark :<http://www.wireshark.org>.

Armitage :<http://www.fastandeasyhacking.com/>.

Kali or Backtrack Linux, Metasploitable, Windows XP

**Practical:30 PERIODS**

### **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** To express knowledge on basics of computer based vulnerabilities
- C02** To gain understanding on different foot printing, reconnaissance and scanning methods.
- C03** To demonstrate the enumeration and vulnerability analysis methods
- C04** To gain knowledge on hacking options available in Web and wireless applications
- C05** To acquire knowledge on the options for network protection and perform ethical hacking to expose the vulnerabilities

### **TEXT BOOKS:**

1. Michael T. Simpson, Kent Backman, and James E. Corley, Hands-On Ethical Hacking and Network Defense, Course Technology, Delmar Cengage Learning, 2010.
2. The Basics of Hacking and Penetration Testing - Patrick Engebretson, SYNGRESS, Elsevier, 2013.
3. The Web Application Hacker's Handbook: Finding and Exploiting Security Flaws, Dafydd Stuttard and Marcus Pinto, 2011.

### **REFERENCES:**

1. Black Hat Python: Python Programming for Hackers and Pentesters, Justin Seitz , 2014

**Total:30 PERIODS**

Course Code	<b>CRYPTOCURRENCY &amp; BLOCKCHAIN TECHNOLOGIES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV33X07</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- Understand the basics of Blockchain
- Learn Different protocols and consensus algorithms in Blockchain
- Learn the Blockchain implementation frameworks
- Experiment the Hyperledger Fabric, Ethereum networks
- Understand the Blockchain Applications

**UNIT I INTRODUCTION TO BLOCKCHAIN 6**

Blockchain- Public Ledgers, Blockchain as Public Ledgers - Block in a Blockchain, TransactionsThe Chain and the Longest Chain - Permissioned Model of Blockchain, Cryptographic -Hash Function, Properties of a hash function-Hash pointer and Merkle tree.

**UNIT II BITCOIN AND CRYPTOCURRENCY 6**

A basic crypto currency, Creation of coins, Payments and double spending, FORTH – the precursor for Bitcoin scripting, Bitcoin Scripts , Bitcoin P2P Network, Transaction in Bitcoin Network, Block Mining, Block propagation and block relay

**UNIT III BITCOIN CONSENSUS 6**

Bitcoin Consensus, Proof of Work (PoW)- HashcashPoW , Bitcoin PoW, Attacks on PoW ,monopoly problem- Proof of Stake- Proof of Burn - Proof of Elapsed Time - Bitcoin Miner, Mining Difficulty, Mining Pool-Permissioned model and use cases.

**UNIT IV HYPERLEDGER FABRIC & ETHEREUM 6**

Architecture of Hyperledger fabric v1.1- chain code- Ethereum: Ethereum network, EVM, Transaction fee, Mist Browser, Ether, Gas, Solidity. UNIT V BLOCKCHAIN APPLICATIONS 6 Smart contracts, Truffle Design and issue- DApps- NFT. Blockchain Applications in Supply Chain Management, Logistics, Smart Cities, Finance and Banking, Insurance - Case Study.

**UNIT V BLOCKCHAIN APPLICATIONS 6**

Smart contracts, Truffle Design and issue- DApps- NFT. Blockchain Applications in Supply Chain Management, Logistics, Smart Cities, Finance and Banking, Insurance,etc- Case Study.

**Theory:30 Periods**

**SAMPLE LIST OF EXPERIMENTS**

Install and understand Docker container, Node.js, Java and Hyperledger Fabric, Ethereum and perform necessary software installation on local machine/create instance on cloud to run.

1. Create and deploy a blockchain network using Hyperledger Fabric SDK for Java Set up and initialize the channel, install and instantiate chain code, and perform invoke and query on your blockchain network.
2. Interact with a blockchain network. Execute transactions and requests against a blockchain network by creating an app to test the network and its rule
3. Deploy an asset-transfer app using blockchain. Learn app development within a Hyperledger Fabric network.

4. Use blockchain to track fitness club rewards. Build a web app that uses Hyperledger Fabric to track and trace member rewards
5. Car auction network: A Hello World example with Hyperledger Fabric Node SDK and IBM Blockchain Starter Plan. Use Hyperledger Fabric to invoke chain code while storing results and data in the starter plan

**Practicals:30 Periods**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**C01:**Understand emerging abstract models for Blockchain Technology

**C02:**Identify major research challenges and technical gaps existing between theory and practice in the crypto currency domain.

**C03:**It provides conceptual understanding of the function of Blockchain as a method of securing distributed ledgers.

**C04:**Apply hyperledger Fabric and Ethereum platform to implement the Block chain Application.

**C05:**To design and develop the Block chain Application.

**TEXT BOOKS:**

1. Bashir and Imran, Mastering Blockchain: Deeper insights into decentralization, cryptography, Bitcoin, and popular Blockchain frameworks, 2017.
2. Andreas Antonopoulos, "Mastering Bitcoin: Unlocking Digital Cryptocurrencies", O'Reilly, 2014.
3. Handbook of Research on Blockchain Technology, published by Elsevier Inc. ISBN: 9780128198162, 2020.

3. Melanie Swan, "Blockchain: Blueprint for a New Economy", O'Reilly, 2015 4. Ritesh Modi, "Solidity Programming Essentials: A Beginner's Guide to Build Smart Contracts for Ethereum and Blockchain", Packt Publishing

**Total :60 Periods**

Course Code	<b>SECURITY AUDITING &amp; COUNTER HACKING TECHNIQUES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV33X08</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- Understand fundamentals, tools, and methodologies for security audits
- Learn techniques to identify and mitigate network vulnerabilities
- Explore methods to assess and secure web applications against hacking
- Develop skills for detecting and responding to security incidents, including digital forensics
- Acquire knowledge on advanced counter-hacking techniques and strategies for proactive security

**UNIT I FUNDAMENTALS OF SECURITY AUDITING 6**

Introduction to Cybersecurity, Principles of Security Auditing, Types of Security Audits, Security Auditing Tools, Methodologies for Security Assessments, Regulatory Compliance Standards, Security Policies and Procedures, Incident Response Planning, Security Documentation and Reporting

**UNIT II NETWORK VULNERABILITY ASSESSMENT 6**

Network Scanning Techniques, Identification and Classification of Vulnerabilities, Exploitation and Penetration Testing, Risk Assessment Methodologies, Remediation Strategies and Best Practices, Network Security Architecture, Firewalls and Intrusion Detection/Prevention Systems, Wireless Network Security, Security Assessments for IoT Devices

**UNIT III WEB APPLICATION SECURITY TESTING 6**

Overview of Web Application Architecture. Common Web Vulnerabilities (e.g., SQL Injection, XSS), Testing Methodologies (e.g., OWASP Top 10), Secure Coding Practices, Web Application Firewall (WAF) Usage, Session Management and Authentication, Content Security Policy (CSP) API Security Considerations, Mobile Application Security Testing

**UNIT IV INCIDENT RESPONSE AND DIGITAL FORENSICS 6**

Incident Detection and Classification, Incident Response Strategies and Frameworks, Basics and Principles of Digital Forensics, Forensic Tools and Analysis Techniques, Chain of Custody and Legal Considerations, Memory Forensics and Disk Analysis, Network Forensics, Malware Analysis and Reverse Engineering, Incident Documentation and Reporting

**UNIT V ADVANCED COUNTER-HACKING STRATEGIES 6**

Proactive Security Measures and Threat Hunting, Threat Intelligence and Analysis, Offensive Countermeasures and Red Teaming, Security Awareness and Training Programs, Security Automation and Orchestration, Cloud Security Considerations, Blockchain Security, Emerging Trends in Cybersecurity Defense, Ethical and Legal Aspects of Counter-Hacking

**Theory: 30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Analyze and critique a security audit report, identifying vulnerabilities and suggesting mitigation strategies.
2. Execute a simulated network vulnerability assessment, documenting findings and proposing remediation measures.
3. Conduct a hands-on web application penetration test, addressing identified vulnerabilities and suggesting security enhancements.

4. Develop an incident response plan for a hypothetical security incident, outlining detection, response, and recovery steps.
5. Analyze a digital forensics case study, presenting findings and recommendations for legal proceedings.
6. Research and analyze threat intelligence data, creating a comprehensive report on potential risks and proactive security measures.
7. Participate in a red teaming exercise to simulate advanced cyber threats, gaining insights into offensive counter-hacking strategies.
8. Design a comprehensive security awareness training program, incorporating best practices and tailored content for end-users.
9. Assess the security of a cloud infrastructure, identifying vulnerabilities and proposing strategies for secure cloud adoption.
10. Research and write a whitepaper on blockchain security, addressing potential threats and proposing protective measures.

**Practical: 30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Grasp cybersecurity principles and apply security auditing methodologies effectively.
- C02** Master network scanning, vulnerability identification, and risk assessment techniques.
- C03** Understand web application vulnerabilities, testing methodologies, and secure coding practices
- C04** Execute incident response strategies and perform digital forensics with precision
- C05** Implement proactive security measures, threat intelligence analysis, and offensive counter measures

**TEXT BOOKS:**

1. "The Web Application Hacker's Handbook" by Dafydd Stuttard and Marcus Pinto (2020, 2nd)
2. "Security Engineering" by Ross J. Anderson (2020, 3rd)

  5. William Stallings. "Network Security Essentials" (2017, 6th)

**Total: 60 PERIODS**

## Vertical 4: ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

Course Code	DATA ANALYTICS AND VISUALIZATION	L	T	P	C
AMPEV43X01		2	0	2	3

### COURSE OBJECTIVES:

1. To understand the data science fundamentals and process.
2. To learn to describe the relationship between data.
3. To utilize present and interpret data using Python libraries for Data Wrangling and data visualization.
4. To study the basic inferential statistics, sampling distribution and processes in data analytics
5. To understand the data analytics techniques and apply descriptive data analytics techniques

### UNIT I INTRODUCTION

6

Data Science: Benefits and uses – facets of data - Data Science Process: Overview – Defining research goals – Retrieving data – Data preparation - Exploratory Data analysis – build the model–presenting findings and building applications - Data Mining - Data Warehousing – Basic Statistical descriptions of Data.

### UNIT II DESCRIBING DATA

6

Basics of Numpy arrays –aggregations –computations on arrays –comparisons, masks, boolean logic – fancy indexing – structured arrays – Data manipulation with Pandas – data in Types of Data - Types of Variables -Describing Data with Tables and Graphs –Describing Data with Averages - Describing Variability - Normal Distributions and Standard (z) Scores.

DESCRIBING RELATIONSHIPS: Correlation –Scatter plots –correlation coefficient for quantitative data –computational formula for correlation coefficient – Regression –regression line –least squares regression line – Standard error of estimate – interpretation of  $r^2$  –multiple regression equations – regression towards the mean

### UNIT III PYTHON LIBRARIES FOR DATA WRANGLING

6

Indexing and selection – operating on data – missing data – Hierarchical indexing – combining datasets – aggregation and grouping – pivot tables

DATA VISUALIZATION: Importing Matplotlib – Line plots – Scatter plots – visualizing errors – density and contour plots – Histograms – legends – colors – subplots – text and annotation – customization – three-dimensional plotting - Geographic Data with Basemap - Visualization with Seaborn.

### UNIT IV DESCRIPTIVE ANALYTICS AND INFERENCE STATISTICS

6

DESCRIPTIVE ANALYTICS - Frequency distributions – Outliers –interpreting distributions – graphs – averages - describing variability – interquartile range – variability for qualitative and ranked data - Normal distributions – z scores –correlation – scatter plots – regression – regression line – least squares regression line – standard error of estimate – interpretation of  $r^2$  – multiple regression equations – regression toward the mean.

INFERENCE STATISTICS - populations – samples – random sampling – Sampling distribution–standard error of the mean - Hypothesis testing – z-test – z-test procedure –decision rule – calculations – decisions – interpretations - one-tailed and two-tailed tests – Estimation – point estimate – confidence interval – level of confidence – effect of sample size.

## UNIT V ANALYSIS OF VARIANCE AND PREDICTIVE ANALYTICS

6

ANALYSIS OF VARIANCE - T-test for one sample – sampling distribution of t – t-test procedure – t-test for two independent samples – p-value – statistical significance – t-test for two related samples. F-test – ANOVA – Two-factor experiments – three f-tests – two-factor ANOVA –Introduction to chi-square tests.

PREDICTIVE ANALYTICS - Linear least squares – implementation – goodness of fit – testing a linear model – weighted resampling. Regression using Stats Models – multiple regression – nonlinear relationships – logistic regression – estimating parameters – Time series analysis – moving averages – missing values – serial correlation – autocorrelation. Introduction to survival analysis.

**Theory:30 PERIODS**

### SAMPLE LIST OF EXPERIMENTS

1. Download, install and explore the features of NumPy, SciPy, Jupyter, Statsmodels and Pandas packages, Scipy, Matplotlib, Pandas, statmodels, seaborn, plotly, bokeh
2. Working with Numpy arrays
3. Working with Pandas data frames
4. Reading data from text files, Excel and the web and exploring various commands for doing descriptive analytics on the Iris data set.
5. Use the diabetes data set from UCI and Pima Indians Diabetes data set for performing the following:
  - a. Univariate analysis: Frequency, Mean, Median, Mode, Variance, Standard Deviation, Skewness and Kurtosis.
  - b. Bivariate analysis: Linear and logistic regression modeling
  - c. Multiple Regression analysis
  - d. Also compare the results of the above analysis for the two data sets.
6. Apply and explore various plotting functions on UCI data sets.
  - a. Normal curves
6. Perform Z-test
8. Perform T-test
9. Perform ANOVA
10. Building and validating linear models
11. Building and validating logistic models
12. Time series analysis

**NUMBER OF PRACTICAL PERIODS: 30**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Define the data science process Understand different types of data descriptions for data science process
- C02** Gain knowledge on relationships between data and use the Python Libraries for Data Wrangling
- C03** Apply visualization Libraries in Python to interpret and explore data
- C04** Perform various statistical analyses to make statistical inferences and explain the end-to-end data analytics pipeline
- C05** Build, validate and communicate data analytical models for complex engineering problems

**TEXT BOOKS:**

**Total: 60 PERIODS**

Course Code	<b>MATHEMATICS FOR MACHINE LEARNING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV43X02</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- Understand fundamental linear algebra concepts, including vector spaces, matrices, eigenvalues, and eigenvectors.
- Gain proficiency in advanced calculus techniques, including gradient-based optimization, to train and fine-tune learning models effectively for optimal performance.
- Explore the role of probability and statistics in learning and understanding their significance in model training, uncertainty estimation, and probabilistic modeling.
- Apply mathematical models through hands-on projects, implementing machine learning models.
- Give exposure to the deep learning models and analyze their performance using mathematical tools.

**UNIT I LINEAR ALGEBRA, MATRIX, AND ANALYTICAL GEOMETRY 6**

Introduction and Motivation - Linear Algebra, Systems of Linear Equations, Matrices, Solving Systems of Linear Equations, Vector Spaces, Linear Independence, Basis and Rank, Linear Mappings, Affine Spaces, Analytic Geometry, Norms, Inner Products, Lengths and Distances, Angles and Orthogonality, Orthonormal Basis, Orthogonal Complement, Inner Product of Functions, Orthogonal Projections, Rotations.

**UNIT II MATRIX DECOMPOSITION AND VECTOR CALCULUS 6**

Matrix Decompositions, Determinant and Trace, Eigenvalues and Eigenvectors, Cholesky Decomposition, Eigen-decomposition and Diagonalization, Singular Value Decomposition, Matrix Approximation, Vector Calculus, Differentiation of Univariate, Partial Differentiation and Gradients, Gradients of Vector-Valued Functions, Gradients of Matrices, Useful Identities for Computing Gradients, Backpropagation and Automatic Differentiation, Higher-Order Derivatives, Linearization, and Multivariate Taylor Series.

**UNIT III PROBABILITY DISTRIBUTIONS AND RISK MINIMISATION 6**

Probability and Distributions - Construction of a Probability Space-Discrete and Continuous Probabilities, Sum Rule, Product Rule, and Bayes' Theorem, Independence and Gaussian Distribution - Conjugacy and the Exponential Family, Change of Variables/Inverse Transform, Continuous Optimization, Optimization Using Gradient Descent, Constrained Optimization and Lagrange Multipliers, Convex Optimization. Machine Learning Models, Empirical Risk Minimization, Parameter Estimation, Probabilistic Modelling and Inference, Directed Graphical Models, Model Selection.

**UNIT IV MACHINE LEARNING MODELS AND APPLICATIONS 6**

Linear Regression, Parameter Estimation, Dimensionality Reduction with Principal Component Analysis, Maximum Variance Perspective, PCA in High Dimensions, Latent Variable Perspective, EM Algorithm, Latent-Variable, Classification with Support Vector Machines.

Tensors from Machine Learning and Data Science, Deep Convolutional Neural Network Architectures for Image Classification, Latent Space and Generative Modelling, Auto encoders and Variational Auto encoders.

**THEORY:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

Use python for implementing the following.

1.Systems of Linear Equations Solver: Implement a program to solve systems of linear equations using methods like Gaussian elimination or LU decomposition.

2.Vector Space Visualization: Use a computational tool like MATLAB or Python with libraries such as NumPy and Matplotlib to visualize vector spaces, linear independence, basis, and rank.

3.Matrix Decomposition Analysis: Implement algorithms for matrix decomposition techniques such as eigen-decomposition, singular value decomposition (SVD), and Cholesky decomposition. Analyze their properties and computational complexities.

4.Gradient Computation: Develop code to compute gradients for univariate and multivariate functions using analytical methods and numerical approximation techniques like finite differences.

5.Optimization Algorithms: Implement gradient descent and its variants for unconstrained optimization problems. Study their convergence properties and compare their performance on benchmark functions.

6.Constrained Optimization with Lagrange Multipliers: Solve constrained optimization problems using the Lagrange multiplier method. Explore its applications in machine learning models and analyze trade-offs between constraints and objectives.

7.Probabilistic Modeling and Inference: Develop a probabilistic model for a given dataset and perform inference using methods like maximum likelihood estimation (MLE) or Bayesian inference. Implement algorithms for parameter estimation and compare their performance.

8. Support Vector Machine (SVM) Classifier: Implement a linear SVM classifier from scratch using optimization techniques like gradient descent or quadratic programming. Evaluate its performance on benchmark datasets and compare it with other classification methods.

9.Principal Component Analysis (PCA): Implement PCA for dimensionality reduction on datasets with high dimensions. Visualize the transformed data and analyze the explained variance ratio of principal components.

10.Deep Convolutional Neural Network (CNN) for Image Classification: Implement a CNN architecture using a deep learning framework like TensorFlow or PyTorch. Train the model on image classification tasks and evaluate its performance on standard datasets like CIFAR-10 or MNIST.

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**C01:**To understand fundamental linear algebra concepts, including vector spaces, matrices, eigenvalues, and eigenvectors.

**C02:**To gain proficiency in advanced calculus techniques, including gradient-based optimization, to train and fine-tune learning models effectively for optimal performance.

**C03:** Explore the role of probability and statistics in learning and understanding their significance in model training, uncertainty estimation, and probabilistic modelling.

**C04:**To apply mathematical models through hands-on projects, implementing machine learning models.

**C05:**To explore implementing deep learning models and analyse their performance using mathematical tools.

Course Code	<b>DEEP LEARNING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV43X03</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To understand the basic ideas and principles of neural networks and concepts of deep learning.
- To study Convolutional Neural Networks with image processing facilities like TensorFlow and Keras.
- To study Recurrent Neural Networks with spESh processing models
- To study Deep Reinforcement Learning and the use of real-time applications.
- To understand and implement deep learning architectures.

**UNIT I FUNDAMENTALS OF DEEP LEARNING 6**

Introduction to Neural Network – Feed Forward Neural Nets – Tensorflow - Deep Learning Fundamentals: Fundamental deep learning concepts, deep learning algorithms, and their types

**UNIT II CONVOLUTIONAL NEURAL NETWORK 6**

Convolutional Neural Networks – Filters – Strides and Padding – The structure of a convolutional network – Improving the performance of CNNs - Multilevel Convolution – Computer Vision with Convolutional Networks – Advanced Computer Vision

**UNIT III RECURRENT NEURAL NETWORK 6**

Recurrent Neural Networks: Introduction – Recursive Neural Networks – Bidirectional RNNs – Deep Recurrent Networks - Complete Auto encoder, Regularized Autoencoder, Stochastic Encoders and Decoders, Contractive Encoders – Language Modelling – Sequence to sequence learning – SpESh Recognition

**UNIT IV DEEP REINFORCEMENT LEARNING 6**

Reinforcement Learning Theory – Markov Decision process – Monte Carlo methods – Temporal Difference methods – Value functions – Q learning – Deep Q-learning – Policy gradient methods – Model-based methods -Actor-Critic Methods

**UNIT V DEEP LEARNING IN AUTONOMOUS VEHICLES 6**

Autonomous Vehicles Introduction – Imitation driving policy – Driving policy with ChaufferNet – DL in Cloud

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS**

1. Implement a feedforward neural network using TensorFlow to classify handwritten digits from the MNIST dataset.
2. Design a convolutional neural network with appropriate filters and padding to classify images from the CIFAR-10 dataset.
3. Compare the performance of different stride values in convolutional layers on a given image recognition task.
4. Explore the impact of multilevel convolutions on improving the accuracy of a CNN for object detection in computer vision.

5. Build a recurrent neural network model to generate text sequences and analyze its performance in language modeling.
6. Develop a bidirectional RNN architecture for sentiment analysis on movie reviews dataset and compare it with a unidirectional RNN.
7. Implement a deep reinforcement learning agent using Q-learning to solve a simple grid world problem.
8. Evaluate the performance of Deep Q-learning algorithm on the CartPole environment in OpenAI Gym.
9. Design an autonomous driving policy using imitation learning and assess its performance in a simulated environment.
10. Investigate the feasibility of deploying a deep learning model for autonomous driving on cloud infrastructure, considering latency and scalability aspects.

**NUMBER OF PRACTICAL PERIODS: 30**

### **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**C01:**Understanding the basic concepts of deep learning.

**C02:**Emphasizing knowledge of Convolutional Neural Networks and applying CNN to its variants for suitable applications.

**C03:**Understanding Recurrent Neural Networks to apply autoencoders and generative models for suitable applications.

**C04:**Understanding deep reinforcement learning

**C05:**Analyzing the key computations underlying deep learning and using them to build and train deep neural networks for various tasks.

### **TEXT BOOKS:**

1. Eugene Charniak, "Introduction to Deep Learning," MIT Press, 2018.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

Course Code	<b>NATURAL LANGUAGE PROCESSING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV43X04</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To learn the mathematical foundations and basics of Natural Language Processing.
- To understand the text data processing technologies for processing text data.
- To understand the role of Information Retrieval and Information Extraction in Text Analytics.
- To acquire knowledge of text data analytics using language models.
- To learn about NLP Tools and real-time examples of NLP.

**UNIT I INTRODUCTION TO NATURAL LANGUAGE PROCESSING 6**

Natural Language Processing – Linguistic Background – Mathematical Foundations – Morphological Analysis – Tokenization – Stemming – Lemmatization – Boundary Determination.

**UNIT II TEXT DATA ANALYSIS 6**

Reading unstructured data – Representing text data – Part of speech tagging – Syntactic representation – Text similarity – WordNet-based similarity – Shallow parsing – Semantic representation.

**UNIT III INFORMATION RETRIEVAL AND EXTRACTION 6**

Information Retrieval: Design features of Information Retrieval Systems-Classical, Nonclassical, Alternative Models of Information Retrieval – Information extraction – Named Entity Recognition – Relation Identification - Template filling.

**UNIT IV LANGUAGE MODELLING 6**

Language model – Probabilistic Models – n-gram language models- Hidden Markov Model- Topic Modelling - Graph Models -Feature Selection and classifiers -Rule-based Classifiers - Maximum entropy classifier – Clustering-Word and Phrase-based Clustering.

**UNIT V NLP TOOLS AND APPLICATIONS 6**

Tools: Natural Language Toolkit, Apache OpenNLP. Applications of Text Analytics – Applications in social media - Life science - Legal Text – Visualization - Case studies.

**Theory:30 Periods**

**SAMPLE LIST OF EXPERIMENTS**

1. Implement tokenization and compare the effectiveness of stemming versus lemmatization in improving text preprocessing for sentiment analysis.
2. Develop a part-of-speech tagging system using NLTK and evaluate its accuracy on a corpus of news articles.
3. Explore various text similarity metrics, including WordNet-based similarity, for clustering news headlines into topics.
4. Build an information retrieval system using classical and nonclassical models and compare their performance on a dataset of scientific papers.
5. Implement a named entity recognition model using Apache OpenNLP and assess its accuracy on legal text documents.

6. Investigate different approaches for relation identification in biomedical texts and evaluate their precision and recall.
7. Construct a language model using n-gram models and compare its performance with a hidden Markov model on a corpus of tweets.
8. Apply topic modeling techniques to extract themes from a collection of customer reviews and visualize the results using t-SNE.
9. Develop a rule-based classifier to categorize legal documents into different types and measure its accuracy against a maximum entropy classifier.
10. Utilize word and phrase-based clustering algorithms to identify patterns in social media conversations and analyze their implications for marketing strategies.

#### **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**C01:** Understand the mathematical foundations and basics of Natural Language Processing.

**C02:** Process text data at the syntactic and semantic level.

**C03:** Extract key information from text data.

**C04:** Analyze text content to provide predictions related to a specific domain using language processing.

**C05:** Design an innovative application using NLP components.

#### **TEXT BOOKS:**

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

Course Code	<b>COMPUTER VISION AND IMAGE PROCESSING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV43X05</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**Course Objectives:**

- Understand the basics of image processing techniques for computer vision.
- Learn the techniques used for image pre-processing.
- Discuss various object detection techniques.
- Understand various object recognition mechanisms.
- Elaborate on video analytics techniques.

**UNIT I INTRODUCTION 6**

Computer Vision-Image representation and image analysis tasks- Image representations- Digitization -properties-color images- Data structures for Image Analysis -Levels of image data representation - Traditional and Hierarchical image data structures.

**UNIT II IMAGE PRE-PROCESSING 6**

Local pre-processing- Image smoothing- Edge detectors-Zero-crossings of the second derivative-Scale in image processing- Canny edge detection -Parametric edge models - Edges in multi-spectral images-Local pre-processing in the frequency domain-Line detection by local pre-processing operators-Image restoration.

**UNIT III OBJECT DETECTION USING MACHINE LEARNING 6**

Object detection- Object detection methods - Deep Learning framework for Object detection- bounding box approach-Intersection over Union(IoU)-Deep Learning Architectures-R-CNN-Faster R-CNN-You Only Look Once (YOLO)-Salient features -Loss Functions-YOLO architectures

**UNIT IV FACE RECOGNITION AND GESTURE RECOGNITION 6**

Face Recognition- Introduction- Applications of Face Recognition- Process of Face Recognition - Deep Face solution by Face book- Face Net for Face Recognition-Implementation using Face Net - Gesture Recognition.

**UNIT V VIDEO ANALYTICS 6**

Video Processing -use cases of video analytics - Vanishing Gradient and exploding gradient problem- ResNet architecture-ResNet and skip connections -Inception Network-Google Net architecture-Improvement in Inception v2- Video analytics -ResNet and Inception v3.

**Theory: 30 Periods**

**SAMPLE LIST OF EXPERIMENTS**

1. Computing the T-pyramid of an image
2. Deriving the quadtree representation of an image
3. Developing programs for geometric transforms like rotation, scaling, skewing, affine transform, bilinear transform
4. Implementing Object Detection and Recognition
5. Motion analysis using moving edges
6. Facial Detection and Recognition
7. Event detection in video surveillance systems

**Practicals: 30 Periods**

**Course Outcomes:**

**CO1:** Understand basic image processing techniques and video analysis.

**CO2:** Explain image pre-processing techniques.

**CO3:** Develop various object detection techniques.

**CO4:** Understand various face recognition mechanisms.

**CO5:** Elaborate on deep learning-based video analytics..

**Text books:**

1. "Image Processing, Analysis, and Machine Vision" by Milan Sonka, Vaclav Hlavac, Roger Boyle
2. "Computer Vision Using Deep Learning Neural Network Architectures with Python and Keras" by Vaibhav Verdhan

**References:**

1. "Computer Vision: Algorithms and Applications" by Richard Szeliski

3. "Computer Vision: A Modern Approach" by D.A. Forsyth, J. Ponce
4. "Computer & Machine Vision" by E.R. Davies

**TOTAL NUMBER OF PERIODS INCLUDING LAB:60**

Course Code	<b>REINFORCEMENT LEARNING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV43X06</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- Explore the historical development and interdisciplinary connections of Reinforcement Learning.
- Gain a deep understanding of Markov Decision Processes (MDPs).
- Focus on iterative policy evaluation and iteration, and understand the convergence properties.
- Understand Monte Carlo methods for model-free prediction and control and their application in reinforcement learning tasks.
- Familiarize with function approximation methods and their applications in reinforcement learning.

**UNIT I Introduction 6**

Origin and history of Reinforcement Learning research.-Connections with other related fields and different branches of machine learning- Probability Primer: Brush up of Probability concepts - Axioms of probability, random variables, PMF, PDFs, CDFs, Expectation, joint and multiple random variables, distributions, correlation, independence.

**Unit 2 Markov Decision Process 6**

RL terminology, Markov property, Markov chains, Markov reward process (MRP).- Bellman equations for MRPs, existence of solution.-Introduction to Markov decision process (MDP), state and action value functions.- Bellman expectation equations, optimality of value functions and policies-Bellman optimality equations.

**Unit 3 : Prediction and Control by Dynamic Programming 6**

Over view of dynamic programming for MDP. Formulation of planning in MDPs, principle of optimality. - Iterative policy evaluation, policy iteration, value iteration.-Proof of convergence of policy evaluation and value iteration algorithms.-DP extensions.

**Unit 4: Monte Carlo Methods for Model-Free Prediction and Control 6**

Overview of Monte Carlo methods for model-free RL-First visit and every visit Monte Carlo, Monte Carlo control.- On-policy and off-policy learning, Importance sampling.-Incremental Monte Carlo Methods for Model Free Prediction, TD Methods.-TD Control methods: SARSA, Q-Learning and their variants.

**Unit 5: Function Approximation Methods 6**

Function approximation methods, gradient descent. -Eligibility trace for function approximation, Control with function approximation.-Least squares, Experience replay in deep Q-Networks.-Policy Gradients, Actor-Critic methods.

**Theory: 30 Periods**

**SAMPLE LIST OF EXPERIMENTS:**

1. Simulation of a Markov Chain.
2. Bellman Equation Implementation.
3. Policy Evaluation with Dynamic Programming.
4. Monte Carlo Prediction.

5. Q-Learning Implementation.
6. Function Approximation with Linear Regression.
7. Actor-Critic Method Implementation.
8. Gradient Descent in Function Approximation.
9. Experience Replay in Deep Q-Networks.
10. Policy Gradient Method Implementation.

**Practicals: 30 Periods**

**COURSE OUTCOMES:**

**CO1:**Attain comprehensive understanding of RL's historical evolution and interdisciplinary connections, alongside fundamental Probability concepts.

**CO2:**Achieve deep comprehension of MDPs, emphasizing terminology, properties, and Bellman equations for optimal decision-making.

**CO3:**Master Dynamic Programming techniques for MDP prediction and control tasks, understanding convergence properties.

**CO4:**Gain thorough understanding of Monte Carlo methods for model-free RL, proficiently implementing First visit and every visit techniques.

**CO5:**Familiarize with function approximation methods, gradient descent, eligibility traces, experience replay, policy gradient methods, and actor-critic architectures in RL applications.

**TEXT BOOKS:**

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>BIG DATA ANALYTICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
AMPEV43X07		2	0	2	3

**COURSE OBJECTIVES:**

- To Understand the Big Data Platform and its Use cases
- To Provide the concept of Hadoop framework and HDFS
- To Understand Map-Reduce Jobs and Spark Framework
- To Provide hands on Hadoop Eco System
- To provide Exposure to Data Analytics with R and Spark Shell

**COURSE DESCRIPTION:**

The course begins with an overview of the fundamental concepts of big data, including the characteristics of big data, challenges associated with its processing and analysis, and the technologies used to manage big data infrastructure. Students will then explore various data processing frameworks, such as Apache Hadoop and Apache Spark, and learn how to leverage them to handle and analyze large-scale datasets efficiently.

**PRE- REQUISITES:**

- Should have knowledge of one Programming Language (Java preferably)
- Practice of SQL (queries and sub queries), exposure to Linux Environment.

**UNIT I INTRODUCTION TO BIG DATA ANALYTICS**

**6**

**Data Storage and Analysis:** Types of Digital Data, Introduction to Big Data, Evolution, Characteristics of Big Data, Traditional Business Intelligence versus Big Data.

**Big Data Analytics:** Classification of Analytics, Big Data Analytics important, Typical Analytical Architecture – Requirement for new analytical architecture – Challenges in Big Data Analytics, Top Analytics Tools – Need of big data frameworks. Data Science - Data Scientist - Terminologies used in Big Data Environments.

**UNIT II HADOOP FRAMEWORK AND HDFS (Hadoop Distributed File System)**

**6**

**Hadoop:** History of Hadoop– Requirement of Hadoop Framework - Design principle of Hadoop – Comparison with other system - Hadoop Components – Hadoop 1 vs Hadoop 2 – Hadoop Daemon’s – Apache Hadoop, Analysing, Data with Unix tools, Analysing Data with Hadoop, Hadoop Streaming.

**HDFS:** HDFS Concepts, HDFS Commands, Design of HDFS, Command Line Interface, Hadoop file system interfaces, Data flow, Data Ingest with Flume and Scoop and Hadoop archives, Hadoop I/O: Compression, Serialization, Avro and File-Based Data structures.

**UNIT III MAP REDUCE AND SPARK FRAMEWORK**

**6**

**Map Reduce:** Anatomy of a Map Reduce Job Run, Failures, Job Scheduling, Shuffle and Sort, Task Execution, Map Reduce Types and Formats, Map Reduce Features. Map Reduce Programming: I/O formats, Map side join, Reduce Side Join, Secondary sorting, Pipelining MapReduce jobs.

**Spark Framework**

Introduction to GPU Computing, CUDA Programming Model, CUDA API, Simple Matrix, Multiplication in CUDA, CUDA Memory Model, Shared Memory Matrix Multiplication, Additional CUDA API Features.

## Unit IV HADOOP ECO SYSTEM

6

Introduction to Hadoop ecosystem technologies: Hadoop Echo System, Hadoop Streaming, Infosphere Big Insights and Big Sheets. Scripting language: Introduction to PIG, Execution Modes of Pig, Comparison of Pig with Databases, Grunt, Pig Latin, User Defined Functions, Data Processing operators. Serialization: AVRO, Co-ordination: Zookeeper. Hive: Hive Shell, Hive Services, Hive Metastore, Comparison with Traditional Databases, HiveQL, Tables, Querying Data and User Defined Functions. HBase: HBasics, Concepts, Clients, Example, Hbase Versus RDBMS. Big SQL: Introduction. Streaming: Flink, Storm.

## UNIT V: DATA ANALYTICS

6

**Data Analytics with R:** Machine Learning: Introduction, Supervised Learning, Unsupervised Learning, Regression Model, Clustering, Collaborative Filtering, Associate Rule Making, Decision Tree, Big Data Analytics with BigR.

**Data Analysis with Spark Shell:** Writing Spark Application - Spark Programming in Scala, Python, R, Java - Application Execution.

**Spark SQL and GraphX:** SQL Context – Importing and Saving data – Data frames – using SQL – GraphX overview – Creating Graph – Graph Algorithms.

**Spark Streaming:** Overview – Errors and Recovery – Streaming Source – Streaming live data with spark.

Recent Trends in Big Data Analytics.

**Theory : 30 Periods**

### Practical Experiments

1. HDFS Commends Map Reduce Program to show the need of Combiner
2. Map Reduce I/O Formats-Text, key-value Map Reduce I/O Formats –Nline, Multiline
3. Sequence file Input/Output Formats Secondary sorting
4. Distributed Cache & Map Side Join, Reduce side Join Building and Running a Spark Application Word count in Hadoop and Spark Manipulating RDD
5. Inverted Indexing in Spark Sequence alignment problem in Spark Implementation of Matrix algorithms in Spark SparkSql programming, Building Spark Streaming application

**Practical: 30 Periods**

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

**OUTCOMES** upon completion the students will be able to:

**CO1:** Identify Big Data and its Business Implications.

**CO2:** Understand the concept of Hadoop framework and HDFS

**CO3:** Understand the Map-Reduce Jobs and Spark Framework

**CO4:** Analyze Infosphere Big Insights Big Data Recommendations.

## **CO5:Apply Data Analytics with R and Spark Shell**

### **Text Books**

### **YouTube Resources**

**edureka!** - This channel offers comprehensive tutorials, webinars, and courses on big data technologies, including Hadoop, Spark, and related ecosystems. Viewers can find videos covering various aspects of big data analytics, such as data ingestion, processing, analysis, and visualization.

**Data School** - Data School provides tutorials and practical tips on data science and big data analytics topics. The channel covers a wide range of subjects, including data preprocessing, machine learning, and data visualization, with a focus on practical applications and real-world examples.

**Big Data University** - Big Data University offers tutorials and courses on big data technologies and analytics. The channel covers topics like Hadoop, Spark, NoSQL databases, and cloud-based big data solutions, catering to both beginners and experienced professionals in the field.

**Google Cloud Platform** - The Google Cloud Platform (GCP) channel features videos and tutorials on big data solutions offered by Google Cloud, such as BigQuery, Dataflow, and Dataproc. Viewers can learn about data analytics best practices, architectural patterns, and case studies on GCP.

**Databricks** - Databricks' channel provides tutorials, webinars, and demonstrations on Apache Spark and Delta Lake, offering insights into big data analytics and machine learning workflows. Viewers can find content on Spark optimization, data engineering, and advanced analytics techniques.

**Cloudera** - Cloudera's channel offers videos and presentations on big data technologies like Hadoop, Spark, and Impala. Viewers can access tutorials, case studies, and expert discussions on topics related to big data analytics, data engineering, and machine learning.

**Total:60 Periods**

Course Code	<b>Generative Artificial Intelligence</b>	L	T	P	C
AMPEV43X08		2	0	2	3

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- Understand the principles and theory behind generative AI.
- Gain practical experience in developing generative AI models.
- Analyze and evaluate the ethical and societal implications of generative AI.
- Apply generative AI techniques to real-world problems and domains.
- Keep up-to-date with the latest developments and trends in the field of generative AI.

**Course Description**

This course provides an introduction to the theory and practical applications of Generative Artificial Intelligence. Students will learn the fundamental concepts and techniques related to generative models and gain hands-on experience with creating and using generative AI systems.

**Prerequisites**

- Basic knowledge of machine learning and deep learning.
- Familiarity with a programming language (e.g., Python).

**UNIT I Introduction to Generative AI 6**

Overview of Generative AI and its applications – Difference between generative and discriminative models – Historical perspective and key milestones – Ethical and societal implications.

**UNIT II Probability and Statistics for Generative AI 6**

Probability distributions and their role in generative models – Maximum Likelihood Estimation (MLE) – Bayesian Inference and Maximum a Posteriori (MAP) estimation – Generative models as probabilistic models

**UNIT III Generative Models 6**

Introduction to Autoencoders – Variational Autoencoders (VAE) – Generative Adversarial Networks (GAN) – Flow-based models – Practical implementation and hands-on exercises (using *TensorFlow*, *PyTorch*, *Jupyter Notebook*, *Keras*, etc).

**UNIT IV Applications of Generative AI 6**

Image generation and manipulation – Text generation and natural language processing – Anomaly detection and data augmentation – Style transfer and artistic applications – Real-world use cases (Art & Design, Medical Imaging, Content creation, Chatbots, Virtual Assistants, Cybersecurity, etc.) and industry examples. Guest Lectures by Industry Experts, and Researchers

**UNIT V Evaluation and Ethical Considerations 6**

Metrics for evaluating generative models (e.g., Inception Score, FID) – Ethical concerns in generative AI, including bias and fairness – Privacy and security considerations – Future trends and emerging technologies in Generative AI.

**Theory : 30 PERIODS**

### **Assignments / Projects (sample):**

1. Write a literature review on the historical development and key milestones in generative AI, highlighting the most influential papers and breakthroughs.
2. Solve a set of probability and statistics problems related to generative models and their applications.
3. Implement a simple autoencoder model and train it on a dataset of your choice for image compression or denoising.
4. Implement a Variational Autoencoder to generate new samples in a chosen domain (e.g., images or text).
5. Create a GAN model to generate synthetic images or text data and evaluate its performance.
6. Develop a text generation model that can generate coherent and contextually relevant text paragraphs or poetry.
7. Implement an image style transfer algorithm to transform photographs into various artistic styles.
8. Write an essay analyzing the ethical implications of generative AI in society, focusing on privacy, bias, and security concerns.
9. Choose a specific industry or domain (e.g., healthcare, finance, or art) and propose a generative AI application that could be beneficial in that field. Provide a detailed plan for its implementation.
10. (Final Project) Design and implement a generative AI project of your choice, which can be an image generator, text generator, or any creative application. Present the project and its results in a report or presentation.

**Practicals:30 PERIODS**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOMES:**

**OUTCOMES:** Upon completion of the course, the students will be able to:

**CO1:** Understand the fundamental principles and applications of Generative Artificial Intelligence and distinguish between generative and discriminative models.

**CO2:** Apply probability and statistics concepts to analyze and model data, with a focus on their role in generative models.

**CO3:** Implement and evaluate various generative models, including Autoencoders, Variational Autoencoders (VAE), and Generative Adversarial Networks (GANs).

**CO4:** Apply generative AI techniques to solve real-world problems, including image generation, text generation, and artistic applications.

**CO5:** Evaluate generative models using appropriate metrics and critically analyze the ethical implications, privacy concerns, and societal impact of generative AI technologies.

### **TEXT BOOKS:**

1. David Foster, "Generative Deep Learning", Second Edition, O'Reilly Media, 2023.
2. Joseph Babcock and Raghav Bali, "Generative AI with Python and TensorFlow 2", Packt Publishing, 2021

3. Jakub Langr and Vladimir Bok, "GANs in Action: Deep learning with Generative Adversarial Networks", Manning, 2019.

#### REFERENCES:

7. Ian Goodfellow, Yoshua Bengio, Aaron Courville, "Deep Learning", The MIT Press, 2016.
8. Hannes Hapke, Cole Howard, Hobson Lane "Natural Language Processing in Action", Manning, 2019.
9. Alberto Chierici, "The Ethics of AI", New Degree Press, 2021.
10. Jacob Emerson, "Ripples of Generative AI", IngramSpark, 2023.
11. Andreas C. Müller, Sarah Guido, "Introduction to Machine Learning with Python", O'Reilly Media, 2017.
12. Eric Matthes, "Python Crash Course", Third Edition, No Starch Press, 2023.

#### YouTube Resources:

9. **3Blue1Brown** - While not specific to generative AI, this channel provides fantastic visual explanations of mathematics and concepts that are fundamental to AI and machine learning.
10. **sentdex** - This channel focuses on machine learning and AI using Python. It includes tutorials on various topics, including generative models.
11. **Two Minute Papers** - This channel offers concise summaries of research papers and breakthroughs in computer graphics, machine learning, and AI, including generative AI.
12. **DeepLizard** - This channel provides tutorials on machine learning and deep learning topics, which can be useful for understanding the technical aspects of generative AI.
13. **Andrew Ng's DeepLearning.ai** - The deeplearning.ai courses on Coursera, created by Andrew Ng, are also available on YouTube. These videos cover deep learning and neural networks, which are foundational to generative AI.
14. **Stanford University's Machine Learning** - You can find recordings of Stanford University's machine learning course on YouTube, which includes lectures on relevant topics. (Stanford Online)
15. **PyTorch** - The official PyTorch YouTube channel provides tutorials and resources for learning PyTorch, a popular framework for deep learning and generative AI.
16. **TensorFlow** - The official TensorFlow YouTube channel offers tutorials and resources for learning TensorFlow, another widely used deep learning framework.

**TOTAL:60 PERIODS**

## Vertical 5: CLOUD COMPUTING

Course Code	Cloud Technologies	L	T	P	C
AMPEV53X01		2	0	2	3

### COURSE OBJECTIVES:

- To understand the principles of cloud architecture, models and infrastructure.
- To understand the concepts of virtualization and virtual machines.
- To gain knowledge about virtualization Infrastructure.
- To explore and experiment with various Cloud deployment environments.
- To learn about the security issues in the cloud environment.

### UNIT I CLOUD ARCHITECTURE MODELS AND INFRASTRUCTURE

6

Cloud Architecture: System Models for Distributed and Cloud Computing – NIST Cloud Computing Reference Architecture – Cloud deployment models – Cloud service models; Cloud Infrastructure: Architectural Design of Compute and Storage Clouds – Design Challenges.

### UNIT II VIRTUALIZATION BASICS

6

Virtual Machine Basics – Taxonomy of Virtual Machines – Hypervisor – Key Concepts – Virtualization structure – Implementation levels of virtualization – Virtualization Types: Full Virtualization – Para Virtualization – Hardware Virtualization – Virtualization of CPU, Memory and I/O devices.

### UNIT III VIRTUALIZATION INFRASTRUCTURE AND DOCKER

6

Desktop Virtualization – Network Virtualization – Storage Virtualization – System-level of Operating Virtualization – Application Virtualization – Virtual clusters and Resource Management – Containers vs. Virtual Machines – Introduction to Docker – Docker Components – Docker Container – Docker Images and Repositories.

### UNIT IV CLOUD DEPLOYMENT ENVIRONMENT

6

Google App Engine – Amazon AWS – Microsoft Azure; Cloud Software Environments – Eucalyptus – OpenStack.

### UNIT V CLOUD SECURITY

6

Virtualization System-Specific Attacks: Guest hopping – VM migration attack – hyperjacking. Data Security and Storage; Identity and Access Management (IAM) - IAM Challenges - IAM Architecture and Practice.

**Theory: 60 Periods**

### LIST OF EXPERIMENTS

1. Install Virtualbox/VMware/ Equivalent open source cloud Workstation with different flavours of Linux or Windows OS on top of windows 8 and above.
2. Install a C compiler in the virtual machine created using a virtual box and execute Simple Programs
3. Install Google App Engine. Create a hello world app and other simple web applications using python/java.
4. Use the GAE launcher to launch the web applications.

5. Simulate a cloud scenario using CloudSim and run a scheduling algorithm that is not present in CloudSim.
6. Find a procedure to transfer the files from one virtual machine to another virtual machine.
7. Install Hadoop single node cluster and run simple applications like wordcount.
8. Creating and Executing Your First Container Using Docker.
9. Run a Container from Docker Hub

**Practical: 30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Understand the design challenges in the cloud.
- C02** Apply the concept of virtualization and its types.
- C03** Experiment with virtualization of hardware resources and Docker.
- C04** Develop and deploy services on the cloud and set up a cloud environment.
- C05** Explain security challenges in the cloud environment.

**TEXT BOOKS:**

1. Kai Hwang, Geoffrey C Fox, Jack G Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
2. James Turnbull, "The Docker Book", O'Reilly Publishers, 2014.
3. Krutz, R. L., Vines, R. D, "Cloud security. A Comprehensive Guide to Secure Cloud Computing", Wiley Publishing, 2010.

**REFERENCES:**

1. James E. Smith, Ravi Nair, "Virtual Machines: Versatile Platforms for Systems and Processes", Elsevier/Morgan Kaufmann, 2005.
2. Tim Mather, Subra Kumaraswamy, and Shahed Latif, "Cloud Security and Privacy: an enterprise perspective on risks and compliance", O'Reilly Media, Inc., 2009.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>VIRTUALIZATION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV53X02</b>		2	0	2	3

**COURSE OBJECTIVES:**

- To Learn the basics and types of Virtualization
- To understand the Hypervisors and its types
- To Explore the Virtualization Solutions
- To Experiment the virtualization platforms

**UNIT I INTRODUCTION TO VIRTUALIZATION 6**

Virtualization and cloud computing - Need of virtualization – cost, administration, fast deployment, reduce infrastructure cost – limitations- Types of hardware virtualization: Full virtualization - partial virtualization - Paravirtualization-Types of Hypervisors.

**UNIT II SERVER AND DESKTOP VIRTUALIZATION 6**

Virtual machine basics- Types of virtual machines- Understanding Server Virtualization- types of server virtualization- Business Cases for Server Virtualization – Uses of Virtual Server Consolidation – Selecting Server Virtualization Platform-Desktop Virtualization-Types of Desktop Virtualization

**UNIT III NETWORK VIRTUALIZATION 6**

Introduction to Network Virtualization-Advantages- Functions-Tools for Network Virtualization-VLAN-WAN Architecture-WAN Virtualization

**UNIT IV STORAGE VIRTUALIZATION 6**

Memory Virtualization-Types of Storage Virtualization-Block, File-Address space Remapping-Risks of Storage Virtualization-SAN-NAS-RAID

**UNIT V VIRTUALIZATION TOOLS 6**

VMWare-Amazon AWS-Microsoft HyperV- Oracle VM Virtual Box - IBM PowerVM- Google Virtualization- Case study.

**Theory:30 PERIODS**

**LIST OF EXPERIMENTS**

1. Create type 2 virtualization in VMWARE or any equivalent Open Source Tool. Allocate memory and storage space as per requirement. Install Guest OS on that VMWARE.
2.
  - a.Shrink and extend virtual disk
  - b.Create, Manage, Configure and schedule snapshots
  - c.Create Spanned, Mirrored and Striped volume
  - d.Create RAID 5 volume
3.
  - a.Desktop Virtualization using VNC
  - b.Desktop Virtualization using Chrome Remote Desktop
4. Create type 2 virtualization on ESXI 6.server 5.Create a VLAN in CISCO packet tracer
5. Install KVM in Linux

6. Create Nested Virtual Machine(VM under another VM)

**Practical: 30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Analyse the virtualization concepts and Hypervisor
- C02** Apply the Virtualization for real-world applications
- C03** Install &Configure the different VM platforms
- C04** Experiment with the VM with various software

**TEXT CUM REFERENCE BOOKS:**

1. Cloud computing a practical approach - Anthony T.Velte , Toby J. Velte Robert Elsenpeter, TATA McGraw- Hill , New Delhi – 2010
2. Cloud Computing (Principles and Paradigms), Edited by Rajkumar Buyya, James Broberg, Andrzej Goscinski, John Wiley & Sons, Inc. 2011
3. David Marshall, Wade A. Reynolds, Advanced Server Virtualization: VMware and Microsoft Platform in the Virtual Data Center, Auerbach
4. Chris Wolf, Erick M. Halter, "Virtualization: From the Desktop to the Enterprise", APress, 2005.
5. James E. Smith, Ravi Nair, "Virtual Machines: Versatile Platforms for Systems and Processes", Elsevier/Morgan Kaufmann, 2005.
6. David Marshall, Wade A. Reynolds, "Advanced Server Virtualization: VMware and Microsoft Platform in the Virtual Data Center", Auerbach Publications, 2006.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>CLOUD ARCHITECTURES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV53X03</b>		2	0	2	3

**COURSE OBJECTIVES:**

- Understand the Fundamentals of Cloud Computing
- Explore Key Concepts in Cloud Architectures
- Evaluate Cloud Service Providers and Deployment Models
- Apply Design Principles for Building Cloud Architectures
- Analyze Architectural Patterns and Networking Strategies in the Cloud

**UNIT I FOUNDATIONS OF CLOUD COMPUTING AND ARCHITECTURAL CONCEPTS 6**

Introduction to Cloud Computing – Definition and Characteristics, Evolution of Cloud Computing, Cloud Service Models (IaaS, PaaS, SaaS), Deployment Models (Public Cloud, Private Cloud, Hybrid Cloud). Key Concepts in Cloud Architectures – Virtualization, Scalability and Elasticity, Reliability and Availability, Security in the Cloud, Compliance and Governance.

**UNIT II CLOUD SERVICE PROVIDERS AND ARCHITECTURAL DESIGN PRINCIPLES 6**

Cloud Service Providers – Overview of Major Cloud Providers (AWS, Azure, Google Cloud, etc.), Comparative Analysis of Cloud Providers, Choosing the Right Cloud Service Provider. Design Principles for Cloud Architectures – Microservices Architecture, Serverless Computing, Containerization (Docker, Kubernetes), Decoupling and Asynchronous Communication.

**UNIT III CLOUD ARCHITECTURE PATTERNS AND NETWORKING 6**

Architectural Patterns in the Cloud – Multi-Tier Applications, Event-Driven Architectures, Big Data Architectures, IoT (Internet of Things) Architectures. Cloud Networking and Connectivity - Virtual Private Clouds, Content Delivery Networks (CDN), Hybrid Networking, Network Security in the Cloud.

**UNIT IV CLOUD DATA MANAGEMENT AND PERFORMANCE OPTIMIZATION 6**

Data Management in the Cloud – Cloud Databases (SQL and NoSQL), Data Storage Services, Data Backup and Recovery, Data Transfer and Migration Strategies. Performance Optimization and Monitoring – Resource Scaling and Auto-Scaling, Performance Monitoring and Logging, Cost Optimization Strategies, Troubleshooting and Debugging in the Cloud.

**UNIT V REAL-WORLD APPLICATIONS AND FUTURE TRENDS 6**

Case Studies and Real-world Implementations – Successful Cloud Migrations, Cloud-Native Applications, Challenges and Lessons Learned. Future Trends in Cloud Architectures - Edge Computing, Quantum Computing and Cloud, Emerging Technologies.

**Theory :60 PERIODS**

**LIST OF EXPERIMENTS**

1. Deploy a virtual machine on AWS. Install a web server and share the public IP address for verification.
2. Set up auto-scaling for an Azure web app. Show how it responds to a simulated increase in user traffic.
3. Create an AWS VPC with security groups. Launch an EC2 instance with a secure connection. Share access details.

4. Dockerize three microservices (e.g., Node.js, Python, Java). Show how they communicate using Docker Compose.
5. Write an AWS Lambda function in Python. Configure an S3 bucket to trigger the function on object creation.
6. Build an AWS-based big data pipeline using S3, Lambda, and Athena. Show data ingestion and query results.
7. Set up an Azure VNet with front-end and back-end subnets. Implement Azure CDN for a web application.
8. Use Google Cloud Monitoring to track the performance of a Compute Engine instance. Implement auto-scaling based on metrics.
9. Analyze Netflix's cloud architecture. Identify key decisions, challenges, and benefits of their migration to the cloud.

**Practical:30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Master the Core Concepts of Cloud Computing
- C02** Demonstrate Proficiency in Designing Secure and Scalable Cloud Architectures
- C03** Evaluate and Select Appropriate Cloud Service Providers
- C04** Apply Architectural Patterns to Real-world Cloud Solutions
- C05** Implement Efficient Networking and Data Management Strategies in Cloud Environments
- C06** Critically Analyze and Troubleshoot Cloud-based Systems

**TEXTBOOKS:**

- 1."Cloud Computing: Concepts, Technology & Architecture" by Thomas Erl, Ricardo Puttini, Zaigham Mahmood
- 2."Architecting the Cloud: Design Decisions for Cloud Computing Service Models" by Michael J. Kavis
- 3."Cloud Native Patterns: Designing Change-tolerant Software" by Cornelia Davis

**REFERENCES:**

- 1."The Art of Cloud Computing: Building Cloud-Based Applications and Infrastructure" by Rajkumar Buyya, Christian Vecchiola, S. Thamarai Selvi
- 2."Cloud Computing: From Beginning to End" by Ray J. Rafaels
- 3."Cloud Application Architectures: Building Applications and Infrastructure in the Cloud" by George Reese

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>CLOUD PLATFORM PROGRAMMING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV53X04</b>		2	0	2	3

### **COURSE OBJECTIVES:**

- Ability to Develop Proficiency in Cloud Service Providers
- Master Cloud Programming Languages and Tools
- Implement Cloud-native Applications
- Ensure Cloud Application Security
- Apply DevOps Practices for Cloud Development

### **UNIT I INTRODUCTION TO CLOUD COMPUTING AND CLOUD PLATFORMS 6**

Overview of Cloud Computing; Evolution of Cloud Computing, Cloud Service Models (IaaS, PaaS, SaaS), Cloud Deployment Models (Public, Private, Hybrid), Major Cloud Service Providers (AWS, Azure, Google Cloud), Setting up Cloud Accounts and Environments, Cloud Platform Services (Compute, Storage, Networking), Identity and Access Management (IAM), Overview of Pricing and Billing in the Cloud.

### **UNIT II PROGRAMMING LANGUAGES AND TOOLS FOR CLOUD 6**

Overview of Programming Languages for Cloud Development, Cloud SDKs and CLIs, Infrastructure as Code (IaC) Concepts and Tools (e.g., Terraform), Containerization and Orchestration (Docker, Kubernetes).

### **UNIT III CLOUD APPLICATION DEVELOPMENT 6**

Serverless Computing and Functions as a Service (FaaS), Microservices Architecture in the Cloud, Cloud-native Development Best Practices, Data Storage and Databases in the Cloud, Testing and Debugging Cloud Applications

### **UNIT IV CLOUD SECURITY AND COMPLIANCE 6**

Security Challenges in the Cloud, Encryption and Key Management, Compliance and Governance in the Cloud, Best Practices for Securing Cloud Applications, Incident Response and Recovery in the Cloud.

### **UNIT V ADVANCED TOPICS IN CLOUD PROGRAMMING 6**

DevOps and Continuous Integration/Continuous Deployment (CI/CD), Monitoring and Logging in the Cloud, Advanced Cloud Services (e.g., AI/ML, IoT), Performance Optimization and Scalability.

**Theory:30 PERIODS**

### **LIST OF EXPERIMENTS**

1. Setting Up a Cloud Account
2. Virtual Machines and Containers
3. Serverless Computing
4. Cloud Storage
5. Database Services
6. Networking and Security
7. Monitoring and Logging

8. Continuous Integration/Continuous Deployment (CI/CD)
9. Scaling and Load Balancing

**10. Identity and Access Management (IAM)**

**Practical: 30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**C01** Able to explain the fundamental concepts of cloud computing, including service models deployment models, and the evolution of cloud technologies.

**C02** Will gain practical experience in setting up and using a cloud platform

**C03** Will acquire proficiency in programming for the cloud, using relevant programming languages, SDKs, and tools.

**C04** Will demonstrate an Understanding of cloud security challenges and solutions, including encryption, identity and access management, compliance.

**C05** Able to design and implement cloud-native applications, incorporating advanced concepts such as serverless computing.

2."Cloud Application Architectures: Building Applications and Infrastructure in the Cloud" by George Reese, Publisher: O'Reilly Media, Edition: 1st edition (2009)

3."Programming Amazon EC2" by Jurg van Vliet and Flavia Paganelli, Publisher: O'Reilly Media, Edition: 1st edition (2011)

4."Kubernetes: Up and Running" by Kelsey Hightower, Brendan Burns, and Joe Beda, Publisher: O'Reilly Media, Edition: 1st edition (2017)

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>CLOUD COMPUTING</b>	L	T	P	C
AMPEV53X05		2	0	2	3

**COURSE OBJECTIVES:**

1. To understand the principles of cloud architecture, models and infrastructure.
2. To understand the concepts of virtualization and virtual machines.
3. To gain knowledge about virtualization Infrastructure.
4. To explore and experiment with various Cloud deployment environments.
5. To learn about the security issues in the cloud environment.

**UNIT I CLOUD ARCHITECTURE MODELS AND INFRASTRUCTURE 6**

Cloud Architecture: System Models for Distributed and Cloud Computing – NIST Cloud Computing Reference Architecture – Cloud deployment models – Cloud service models; Cloud Infrastructure: Architectural Design of Compute and Storage Clouds – Design Challenges

**UNIT II VIRTUALIZATION BASICS 6**

Virtual Machine Basics – Taxonomy of Virtual Machines – Hypervisor – Key Concepts – Virtualization structure – Implementation levels of virtualization – Virtualization Types: Full Virtualization – Para Virtualization – Hardware Virtualization – Virtualization of CPU, Memory and I/O devices.

**UNIT III VIRTUALIZATION INFRASTRUCTURE AND DOCKER 7**

Desktop Virtualization – Network Virtualization – Storage Virtualization – System-level of Operating Virtualization – Application Virtualization – Virtual clusters and Resource Management – Containers vs. Virtual Machines – Introduction to Docker – Docker Components – Docker Container – Docker Images and Repositories.

**UNIT IV CLOUD DEPLOYMENT ENVIRONMENT 6**

Google App Engine – Amazon AWS – Microsoft Azure; Cloud Software Environments – Eucalyptus – OpenStack.

**UNIT V CLOUD SECURITY 5**

Virtualization System-Specific Attacks: Guest hopping – VM migration attack – hyperjacking. Data Security and Storage; Identity and Access Management (IAM) - IAM Challenges - IAM Architecture and Practice.

**PRACTICAL EXERCISES: 30 PERIODS**

1. Install Virtualbox/VMware/ Equivalent open source cloud Workstation with different flavours of Linux or Windows OS on top of windows 8 and above.
2. Install a C compiler in the virtual machine created using a virtual box and execute Simple Programs
3. Install Google App Engine. Create a hello world app and other simple web applications using python/java.
4. Use the GAE launcher to launch the web applications.
5. Simulate a cloud scenario using CloudSim and run a scheduling algorithm that is not present in CloudSim.
6. Find a procedure to transfer the files from one virtual machine to another virtual machine.
7. Install Hadoop single node cluster and run simple applications like wordcount.
8. Creating and Executing Your First Container Using Docker.
9. Run a Container from Docker Hub

**COURSE OUTCOMES:**

**CO1:** Understand the design challenges in the cloud.

**CO2:** Apply the concept of virtualization and its types.

**CO3:** Experiment with virtualization of hardware resources and Docker.

**CO4:** Develop and deploy services on the cloud and set up a cloud environment.

**CO5:** Explain security challenges in the cloud environment.

**TOTAL: 60 PERIODS**

**TEXT BOOKS**

1. Kai Hwang, Geoffrey C Fox, Jack G Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
2. James Turnbull, "The Docker Book", O'Reilly Publishers, 2014.

<b>Course Code</b>	<b>STREAM PROCESSING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV53X06</b>		2	0	2	3

**COURSE OBJECTIVES:**

- Introduce Data Processing terminology, definition & concepts
- Define different types of Data Processing
- Explain the concepts of Real-time Data processing
- Select appropriate structures for designing and running real-time data services in a business environment
- Illustrate the benefits and drive the adoption of real-time data services to solve real world problems

**UNIT I FOUNDATIONS OF DATA SYSTEMS 6**

Introduction to Data Processing, Stages of Data processing, Data Analytics, Batch Processing, Stream processing, Data Migration, Transactional Data processing, Data Mining, Data Management Strategy, Storage, Processing, Integration, Analytics, Benefits of Data as a Service, Challenges

**UNIT II REAL-TIME DATA PROCESSING 6**

Introduction to Big data, Big data infrastructure, Real-time Analytics, Near real-time solution, Lambda architecture, Kappa Architecture, Stream Processing, Understanding Data Streams, Message Broker, Stream Processor, Batch & Real-time ETL tools, Streaming Data Storage

**UNIT III DATA MODELS AND QUERY LANGUAGES 6**

Relational Model, Document Model, Key-Value Pairs, NoSQL, Object-Relational Mismatch, Many- to-One and Many-to-Many Relationships, Network data models, Schema Flexibility, Structured Query Language, Data Locality for Queries, Declarative Queries, Graph Data models, Cypher Query Language, Graph Queries in SQL, The Semantic Web, CODASYL, SPARQL

**UNIT IV EVENT PROCESSING WITH APACHE KAFKA 6**

Apache Kafka, Kafka as Event Streaming platform, Events, Producers, Consumers, Topics, Partitions, Brokers, Kafka APIs, Admin API, Producer API, Consumer API, Kafka Streams API, Kafka Connect API

**UNIT V REAL-TIME PROCESSING USING SPARK STREAMING 6**

Structured Streaming, Basic Concepts, Handling Event-time and Late Data, Fault-tolerant Semantics, Exactly-once Semantics, Creating Streaming Datasets, Schema Inference, Partitioning of Streaming datasets, Operations on Streaming Data, Selection, Aggregation, Projection, Watermarking, Window operations, Types of Time windows, Join Operations, Deduplication

**Theory:30 PERIODS**

**LIST OF EXPERIMENTS**

1. Install MongoDB
2. Design and Implement Simple application using MongoDB
3. Query the designed system using MongoDB
4. Create a Event Stream with Apache Kafka
5. Create a Real-time Stream processing application using Spark Streaming
6. Build a Micro-batch application

7. Real-time Fraud and Anomaly Detection,
8. Real-time personalization, Marketing, Advertising

**Practical:30 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Understand the applicability and utility of different streaming algorithms.
- C02** Describe and apply current research trends in data-stream processing.
- C03** Analyze the suitability of stream mining algorithms for data stream systems.
- C04** Program and build stream processing systems, services and applications.
- C05** Solve problems in real-world applications that process data streams.

**TEXT BOOKS:**

1. Streaming Systems: The What, Where, When and How of Large-Scale Data Processing by Tyler Akidau, Slava Chemyak, Reuven Lax, O'Reilly publication
2. Designing Data-Intensive Applications by Martin Kleppmann, O'Reilly Media
3. Practical Real-time Data Processing and Analytics : Distributed Computing and Event Processing using Apache Spark, Flink, Storm and Kafka, Packt Publishing

**REFERENCES:**

1. <https://spark.apache.org/docs/latest/streaming-programming-guide.html>
2. [Kafka.apache.org](https://kafka.apache.org)

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>FOG AND EDGE COMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV53X07</b>		2	0	2	3

**COURSE OBJECTIVES:**

- To enhance real-time data processing and analytics at the network edge.
- To optimize resource utilization and reduce latency in fog computing environments.
- To improve scalability and flexibility for edge devices and applications.
- To Enhance security and privacy for data processing at the edge.
- To Facilitate seamless integration of fog and edge computing with cloud services.

**UNIT I INTRODUCTION TO FOG AND EDGE COMPUTING 6**

Definition and Fundamentals: Overview of Fog and Edge Computing, Key concepts and characteristics, Motivations and Advantages: Reasons for adopting Fog and Edge Computing, Comparative advantages over traditional Cloud Computing, Use Cases and Applications: Challenges and Limitations: Security concerns, privacy issues, and compliance, Comparison with Cloud Computing: Contrasting characteristics and use cases, Complementary roles in a hybrid computing environment.

**UNIT II ARCHITECTURES AND COMPONENTS 6**

Edge Computing Architecture Models: Design principles and characteristics, Hierarchical vs. flat architectures. Fog Nodes and Infrastructure: Role and capabilities of Fog nodes, Infrastructure components supporting Edge Computing. Edge Device Types and Capabilities: Categorization of Edge devices (e.g., gateways, sensors, actuators), Capabilities and limitations of different device types. Edge-to-Cloud Communication Models; Middleware and Software Frameworks: Middleware solutions for Edge Computing.

**UNIT III SECURITY AND PRIVACY IN EDGE COMPUTING 6**

Security Challenges in Edge Computing: Identifying security threats in Edge Computing, Risks associated with decentralized architectures. Methods for secure access control: Role of authentication in ensuring device integrity, Data Encryption in Edge Environments: Encryption strategies for data at rest and in transit. Privacy Concerns and Regulatory Compliance; Risk Management and Incident Response.

**UNIT IV EDGE APPLICATION DEVELOPMENT 6**

Programming Models and Frameworks: Overview of programming models for Edge Computing, Exploration of popular frameworks for Edge application development, Integration with IoT Devices: Techniques for integrating Edge Computing with Internet of Things (IoT) devices. Edge Application Deployment Strategies; Edge-to-Cloud Communication Patterns; Optimizing Edge Application Performance: Performance considerations in Edge Computing, Strategies for optimizing resource usage and responsiveness.

**UNIT V PERFORMANCE OPTIMIZATION AND FUTURE TRENDS 6**

Performance Metrics and Optimization: Metrics for evaluating performance in Edge Computing. Strategies for optimizing Edge applications; Energy-Efficient Edge Architectures: Techniques for optimizing energy consumption, Green computing practices in Edge environments, Real-time Processing and Analytics: Approaches for real-time data processing at the Edge, Analytics capabilities in decentralized architectures. Scalability and Flexibility in Edge Architectures; Emerging Trends in Fog and Edge Computing.

**Theory:30 PERIODS**

**LIST OF EXPERIMENTS**

1. Design and deploy a fog computing architecture for a smart city application.
2. Optimize data processing algorithms for edge devices in a real-time monitoring system.
3. Evaluate resource utilization in a fog computing environment using simulation tools.
4. Implement security protocols for edge devices to protect sensitive data.
5. Develop a scalable edge computing solution for IoT devices in a manufacturing setting.
6. Integrate fog computing with cloud services to enhance overall system efficiency.
7. Perform a hands-on deployment of edge computing nodes in a network infrastructure.
8. Design and implement a fault-tolerant edge computing solution for critical applications.
9. Conduct performance testing to assess the latency reduction achieved through edge computing.
10. Create a comprehensive case study on the successful integration of fog and edge computing in a specific industry.

**Practical:30 PERIODS**

**COURSE OUTCOMES:**

**On completion of this course, the students will be able to:**

- CO1** Proficiently deploy and manage fog and edge computing solutions in diverse environments.
- CO2** Demonstrate expertise in optimizing data processing and analytics at the network edge.
- CO3** Evaluate and enhance resource efficiency for fog computing deployments.
- CO4** Implement robust security measures for safeguarding edge computing data.
- CO5** Successfully integrate fog and edge computing technologies to address real-world challenges.

**TEXT& REFERENCE BOOKS**

- 1."Fog and Edge Computing: Principles and Paradigms" by Rajkumar Buyya and Amir Vahid Dastjerdi (Wiley, 1st Edition, 2018),
- 2."Edge Computing: A Primer" by Shiwen Mao and Ying-Chang Liang (Wiley, 1st Edition, 2019),
- 3."Fog Computing in the Internet of Things: Intelligence at the Edge" by Yogesh Simmhan, Nalini Venkatasubramanian, and Viktor K. Prasanna (Springer, 1st Edition, 2018),
- 4."Fog Computing: Concepts, Frameworks and Technologies" by Flavio Bonomi, Rodolfo Milito, Jiang Zhu, and Sateesh Addepalli (Springer, 1st Edition, 2018),
- 5."Edge Computing – The Dawn of Industry 4.0 Revolution" by Satya Prakash Ghrera (CRC Press, 1st Edition, 2020)
- 6."Fog Computing: Towards Minimizing Latency and Improving QoE in the Internet of Things" by Mohammad Mehedi Hassan, Saad B. Qaisar, and Abdelgadir Mohammed Ahmed (Springer, 1st Edition, 2018).

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>BLOCKCHAIN TECHNOLOGY AND CLOUD COMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV53X08</b>		2	0	2	3

**Course Objectives:**

- Introduce students to the core principles, mechanisms, and applications of Blockchain Technology and Cloud Computing.
- Foster a solid theoretical foundation in Blockchain mechanisms, cryptographic principles, cloud architectures, and enabling technologies.
- Provide hands-on experience through lab sessions, experiments, and projects to apply theoretical concepts into practical scenarios.
- Enable students to integrate the principles and practices of Blockchain and Cloud Computing to develop innovative and efficient solutions.
- Empower students to analyze real-world use cases and explore the potential of utilizing Blockchain and Cloud Computing in various applications.

**UNIT I: INTELLIGENT SYSTEMS AND PYTHON PROGRAMMING 6**

Introduction to Machine Learning and Deep Learning -Performance Improvement with Machine Learning -Building Intelligent Systems-Introduction to Python-Python Programming

**UNIT II: PYTHON FOR ML 6**

Python Application of Linear Regression and Polynomial Regression using SciPy -Interpolation, Overfitting, and Underfitting concepts & examples using SciPy -Clustering and Classification using Python

**UNIT III: EMERGING TRENDS IN HARDWARE ARCHITECTURES FOR DEEP LEARNING 6**

Quantization and Precision Reduction Techniques -Hardware-aware Neural Architecture Hardware-software Co-design for Deep Learning Systems -Memory Hierarchy and Cache Optimization for Deep Learning -Parallelization and Distributed Training of Deep Learning Models. Energy-efficient Deep Learning Hardware Architectures -Hardware Acceleration for Specific Deep Learning Applications (e.g., Natural Language Processing, Computer Vision)

**UNIT IV: PYTHON FOR DL 6**

Python Applications for Deep Learning -Python for CNN and YOLO

**UNIT V: CASE STUDIES 6**

Development of Intelligent System for Power System Protection -Smart Energy-IOE (Internet of Everything)-Motor Control-BMS (Building Management Systems)-Intelligent Systems for Industry 4.0 and Industry 5.0

**Theory:30 PERIODS**

**SAMPLE LIST OF EXPERIMENTS (NUMBER OF PRACTICAL PERIODS: 30)**

1. Implement linear regression and polynomial regression in Python using SciPy, analyze concepts like interpolation, overfitting, and underfitting, then explore clustering and classification algorithms.
2. Investigate quantization and precision reduction techniques in hardware architectures for deep learning, focusing on hardware-software co-design and memory hierarchy optimization.
3. Develop Python applications for deep learning, specifically for Convolutional Neural Networks (CNN) and You Only Look Once (YOLO) algorithms.

4. Create intelligent systems for various applications such as power system protection, smart energy management, motor control, and building management systems (BMS), exploring Industry 4.0 and Industry 5.0 scenarios.

**Practical:30 PERIODS**

**COURSE OUTCOMES:**

1. Upon completion of this course, students will be able to:
2. Gain proficiency in the Python programming language and learn how to apply it in the context of intelligent systems.
3. Learn Python libraries such as NumPy, Pandas, and scikit-learn to preprocess data, build and train Machine Learning models, and evaluate their performance.
4. Learn Deep Learning libraries such as TensorFlow or PyTorch to build, train, and evaluate Deep Learning models for tasks such as image classification, natural language processing, and computer vision.
5. Learn hardware components, such as processors, memory, and accelerators, and how they are integrated.
6. Learn intelligent systems implementations, examine their design choices, evaluate their performance, and understand the challenges.

**TEXT CUM REFERENCE BOOKS:**

1. "Intelligent Systems: Principles, Paradigms, and Pragmatics" by Rajendra P. Srivastava (2013)
2. "Intelligent Systems: A Modern Approach" by Thomas Bäck, David B. Fogel, and Zbigniew Michalewicz (2000)
3. "Intelligent Systems: Modeling, Optimization, and Control" by Grzegorz Bocewicz and Konrad Jackowski (2016)
4. "Intelligent Systems: Architecture, Design, and Control" by Janos Sztipanovits and Gabor Karsai (2018)
5. "Intelligent Systems: Concepts and Applications" by Veera M. Boddu (2017)

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

## Vertical 6: IOT SYSTEMS

<b>Course Code</b>	<b>FOUNDATIONS OF EMBEDDED IOT SYSTEMS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV63X01</b>		2	0	2	3

### COURSE OBJECTIVES:

- To provide students with a good depth of knowledge of Designing Embedded and IOT Systems for various applications.
- Knowledge of the design and analysis of Embedded and IoT Systems for Electronics Engineering students.

### UNIT I INTRODUCTION TO EMBEDDED AND IOT SYSTEMS 6

Introduction Embedded and IoT systems, Definition, Examples and components of embedded and IoT Systems, Embedded and IoT Systems Design Process, Various Embedded and IoT cores controllers.

### UNIT II HARDWARE/SOFTWARE CO-DESIGN FOR EMBEDDED AND IOT SYSTEMS 6

Microcontrollers for embedded systems, Arduino embedded platform, Peripheral interfacing and programming with Arduino platform, Sensors and Actuator interfacing, Cloud support with Arduino platform.

### UNIT III PROTOCOLS FOR EMBEDDED AND IOT SYSTEMS 6

Serial protocols, UART, I2C, and SPI. NFC, Wireless protocols like, RFID, Zig-bee, IEEE 802.15.4e, Thread, 6LoWPAN, Constrained Application Protocol (CoAP), Extensible Messaging Protocol (XMPP) , WebSocket , Advanced Message Queueing Protocol (AMQP) , Message Queue Telemetry Transport (MQTT), Web Real Time Communications (WebRTC), LoRa, SIGFOX, Z Wave.

### UNIT IV IOT BASED EMBEDDED SYSTEMS 6

Open source OS for IoT such as Contiki OS, TinyOS, Basic architecture of an IoT based Embedded Systems., Embedded Hardware for IoT applications, like Raspberry Pi, Arduino, and Raspberry Pi based development board, IoT Cloud Platform and IoT client applications on mobile phones.

### UNIT V CASE STUDIES OF EMBEDDED AND IOT SYSTEMS 6

Embedded application development through Arduino and Raspberry Pi based development boards, Development of mini-Project on new version of Operating systems and development board. That project should also address to the current societal needs.

**Theory :30 Periods**

### LIST OF EXPERIMENTS

1. Study of Open source operating system used in Embedded Design.
2. Introduction to Arduino based Embedded System Programming.
3. LED Interfacing program for Arduino based Embedded System
4. Interfacing Push button Switch interfacing with Arduino based Embedded System
5. External Peripheral Interfacing with Arduino based Embedded System.
6. On Chip peripheral programming with Arduino/Raspberry Pi based Embedded System
7. Serial Communication Protocol programming with Arduino/Raspberry Pi based Embedded
8. Systems.
9. Wireless communications with Arduino/Raspberry Pi Embedded IOT Platform.

10. Bluetooth communication interfacing with Arduino/Raspberry Pi Embedded IOT Board.
11. WiFi module interfacing with Arduino/Raspberry Pi Embedded IOT Board.
12. Embedded Systems design with IOT capability.
13. IOT based Temperature monitoring embedded system with open source cloud tools.
14. Introduction to RTOS
15. RTOS based task performances

**Practical: 30 Periods**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- CO1 Knowledge of theory and practice related to Embedded and IOT System.
- CO2 Ability to identify, formulate and solve engineering problems by using Embedded Systems with IoT.
- CO3 Ability to implement real field problem by gained knowledge of Embedded Systems with IoT capability.

**TEXT CUM REFERENCE BOOKS:**

1. Muhammad Ali Mazidi Shujen Chen, Sepehr Naimi Sarmad Naimi "Embedded Programming Using C Language", 1st Edition, Freescale ARM Cortex-M.
2. Steve Ferbur, "ARM System on Chip".
3. Rajkamal, "Embedded System: Architecture, Programming and Design", TMH3.
4. Dr.Ovidiu Vermesan, Dr. Peter Friess, "Internet of Things: Converging Technologies for Smart Environments and Integrated Ecosystems", River Publisher

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>IOT NETWORKS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV63X02</b>		2	0	2	3

**COURSE OBJECTIVES:**

1. To give an understanding about the choice and application of IoT & M2M communication protocols.
2. To describe Cloud computing and design principles of IoT.
3. To relate to MQTT clients, MQTT server and its programming.
4. To describe the architectures and communication protocols of WSNs.
5. To identify the uplink and downlink communication protocols associated with specific application of IOT /WSNs.

**UNIT I OVERVIEW OF INTERNET OF THINGS 6**

IoT Conceptual Framework, IoT Architectural View, Technology Behind IoT, Sources of IoT, M2M communication, Examples of IoT. Modified OSI Model for the IoT/M2M Systems, data enrichment, data consolidation and device management at IoT/M2M Gateway, web communication protocols used by connected IoT/M2M devices, Message communication protocols (CoAP-SMS, CoAP-MQ, MQTT, XMPP) for IoT/M2M devices. -Refer Chapter 1,2 and 3 of Text 1.

**UNIT II ARCHITECTURE AND DESIGN PRINCIPLES FOR IOT 6**

Internet connectivity, Internet-based communication, IPv4, IPv6, 6LoWPAN protocol, IP Addressing in the IoT, Application layer protocols: HTTP, HTTPS, FTP, TELNET and ports.

**UNIT III PROTOTYPING AND DESIGNING SOFTWARE FOR IOT APPLICATIONS 6**

Introduction, Prototyping Embedded device software, Programming Embedded Device Arduino Platform using IDE, Reading data from sensors and devices, Devices, Gateways, Internet and Web/Cloud services software development. Programming MQTT clients and MQTT server. Introduction to IoT privacy and security. Vulnerabilities, security requirements and threat analysis, IoT Security Tomography and layered attacker model. -Refer Chapter 9 and 10 of Text 1.

**UNIT IV OVERVIEW OF WIRELESS SENSOR NETWORKS 6**

Challenges for Wireless Sensor Networks, Enabling Technologies for Wireless Sensor Networks. Architectures: Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes, Operating Systems and Execution Environments, Network Architecture-Sensor Network Scenarios, Optimization Goals and Figures of Merit, Design principles for WSNs, Service interfaces of WSNs Gateway Concepts. -Refer Chapter 1,2, 3 of Text 2.

**UNIT V COMMUNICATION PROTOCOLS 6**

Physical Layer and Transceiver Design Considerations, MAC Protocols for Wireless Sensor Networks, Low Duty Cycle Protocols and Wakeup Concepts - S-MAC, The Mediation Device Protocol, Wakeup Radio Concepts, Contention based protocols (CSMA, PAMAS), Schedule based protocols (LEACH, SMACS, TRAMA) Address and Name Management in WSNs, Assignment of MAC Addresses, Routing Protocols- Energy-Efficient Routing, Geographic Routing, Hierarchical networks by clustering. Refer Chapter 4, 5, 7 and 11 of Text 2. Lt, L2, L3

**Theory :30 Periods**

## **LIST OF EXPERIMENTS**

1. Implement an IoT conceptual framework and analyze M2M communication using CoAP-SMS and CoAP-MQ protocols, focusing on data enrichment and consolidation at the IoT/M2M gateway.
2. Design a prototype for Internet connectivity in IoT, exploring IPv4, IPv6, and 6LoWPAN protocol, alongside understanding application layer protocols like HTTP, HTTPS, and FTP.
3. Develop embedded device software using Arduino IDE, read data from sensors, and program MQTT clients and servers while addressing IoT privacy and security concerns through threat analysis and IoT Security Tomography.
4. Explore enabling technologies and architectures for wireless sensor networks (WSNs), understand single-node architecture components, and optimize energy consumption using operating systems and execution environments.
5. Analyze physical layer and transceiver design considerations for WSNs, implement MAC protocols like S-MAC and contention-based protocols like CSMA, and design energy-efficient routing protocols for hierarchical networks by clustering.

**Practical: 30 Periods**

## **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Understand choice and application of IoT & M2M communication protocols.
- C02** Describe Cloud computing and design principles of IoT.
- C03** Relate to MQTT clients, MQTT server and its programming.
- C04** Describe the architectures and communication protocols of WSNs.
- C05** Identify the uplink and downlink communication protocols associated with specific application of IOT /WSNs.

## **TEXTBOOKS:**

1. Raj Kamal, "Internet of Things-Architecture and Design Principles", McGraw Hill Education.
- 2 Holger Karl & Andreas Willig, " Protocols And Architectures for Wireless Sensor Networks", John Wiley, 2005.

## **REFERENCES:**

1. Feng Zhao & Leonidas J. Guibas, "Wireless Sensor Networks- An Information Processing Approach", Elsevier, 007.
- 2 Kazem Sohraby, Daniel Minoli, & Taieb Znati, " Wireless Sensor Networks- Technology, Protocols and Applications", John Wiley, 2007.
3. Anna Hac, "Wireless Sensor Network Designs", John Wiley, 2003.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>SECURE HARDWARE AND EMBEDDED DEVICES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV63X03</b>		2	0	2	3

**COURSE OBJECTIVES:**

- To Understand the Concepts of Computer and Network Security
- To Study and Understand Encryption Techniques.
- To Explore the different aspects of Embedded System Security.
- To Understand the role of Security Aspects during Data Transfer and Communication.
- To apply the Security Algorithms for Real-time Applications.

**UNIT I: BACKGROUND AND INTRODUCTION**

**6**

Computer and Network Security Concepts- The OSI Security Architecture-Security Attacks and Services -Security Mechanisms-Fundamentals of Security Design Principles -Introduction to Number Theory

**UNIT II: SYMMETRIC CIPHERS**

**6**

Classical Encryption Techniques -Symmetric Cipher Model -Substitution and Transposition Techniques -Block Ciphers and Data Encryption Standard (DES) -Advanced Encryption Standard (AES)

**UNIT III: EMBEDDED SYSTEMS SECURITY**

**6**

Embedded Security Trends -Security Policies and Threats-System Software -onsiderations Access Control and Hypervisors-Integrity Assurance of the Trusted Computing Base (TCB)

**UNIT IV: EMBEDDED CRYPTOGRAPHY AND DATA PROTECTION PROTOCOLS**

**6**

One-time Pad and Cryptographic Modes -Public Key Cryptography and Key Management Elliptic Curve Cryptography and Hash Functions -Cryptographic Certifications Data Protection Protocols for Embedded Systems

**UNIT V: PRACTICAL EMBEDDED SYSTEM SECURITY**

**6**

Network Communications Protocols and Built-in Security -Security Protocols and Algorithms-Secured Socket Layer (SSL)-Embedded Security in Wireless Systems Application-Layer Protocols and Cryptographic Algorithms

**Theory :30 Periods**

**LIST OF EXPERIMENTS**

1. Analysis of OSI Security Architecture
2. Implementation of classical encryption techniques
3. Implementation and strength analysis of Data Encryption Standard (DES)
4. Exploration and implementation of Advanced Encryption Standard (AES)
5. Investigation of embedded security trends, policies, and threats
6. Examination of system software considerations for embedded systems
7. Implementation of cryptographic primitives
8. Implementation of public key cryptography in embedded systems
9. Comparison of data protection protocols for embedded systems
10. Implementation of a secure communication protocol for resource-constrained embedded systems

**COURSE OUTCOMES:**

**Upon completion of this course, the students will be able to:**

**C01:** Understand the significance of Security.

**C02:** Understand major concepts and techniques related to Cryptography.

**C03:** Demonstrate thorough knowledge about aspects of Embedded System Security.

**C04:** Understand the role of Security Aspects during Data Transfer and Communication.

**C05:** Applying the Security Algorithms for Real-time Applications.

**TEXT CUM REFERENCE BOOKS:**

1. "Cryptography and Network Security Principles and Practice", 7th Edition - Global Edition, William Stallings, Pearson Education Limited, 2017.
2. "Embedded Systems Security - Practical Methods for Safe and Secure Software and Systems Development", David Kleidermacher and Mike Kleidermacher, Newnes (an imprint of Elsevier), 2012.
3. "Practical Embedded Security - Building Secure Resource-Constrained Systems", Timothy Stapko, Newnes (an imprint of Elsevier), 2008.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>IOT PROCESSORS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV63X04</b>		2	0	2	3

**COURSE OBJECTIVES:**

1. Learn the architecture and features of ARM.
2. Study the exception handling and interrupts in CORTEX M3
3. Program the CORTEX M3
4. Learn the architecture of STM 32L15XXX ARM CORTEX M3/M4 microcontroller.
5. Understand the concepts of System – On – Chip (SoC)

**UNIT I OVERVIEW OF ARM AND CORTEX-M3**

**6**

ARM Architecture – Versions, Instruction Set Development, Thumb 2 and Instruction Set Architecture, Cortex M3 Basics: Registers, Stack Pointer, Link Register, Program Counter, Special Registers, Operation Mode, Exceptions and Interrupts, Vector Tables, Stack Memory Operations, Reset Sequence , CORTEX M3 Instruction Sets: Assembly Basics, Instruction List, Instruction Descriptions, CORTEX M3 – Implementation Overview: Pipeline, Block Diagram. Bus Interfaces, I – Code Bus, D – Code Bus, System Bus- External PPB and DAP Bus.

**UNIT II CORTEX EXCEPTION HANDLING AND INTERRUPTS**

**6**

Exception Types, Priority, Vector Tables, Interrupt Inputs and Pending behaviour, Fault Exceptions, Supervisor Call and Pendable Service Call, NVIC: Nested Vector Interrupt Controller; Overview, Basic Interrupts, SYSTICK Time, Interrupt Behaviourm Interrupt/Exception Sequences, Exception Exits, Nested Interrupts, Tail – Chaining Interrupts, Late Arrivals and Interrupt Latency.

**UNIT III CORTEX M3/M4 PROGRAMMING**

**6**

Cortex M3/M4 Programming: Overview, Typical Development Flow, Using C, CMSIS Using Assembly, Exception Programming Using Interrupts, Exception/Interrupt Handlers, Software Interrupts, Vector Table Relocation, Memory Protection Unit and other CORTEX M3 Features, MPU Registers, Setting up the MPU, Power Management, Multiprocessor Configuration.

**UNIT IV STM32L15XXX ARM CORTEX M3/M4 MICROCONTROLLER AND DEBUGGING TOOLS**

**6**

STM32L15XXX ARM CORTEX M3/M4 Microcontroller: Memory and Bus Architecture, Power Control, Reset and Clock Control, STM32L15XXX Peripherals: GPIOs, System Configuration Controller, NVIC, ADC, Comparators, GP Timers, USART Development and Debugging Tools: Software and Hardware tools like Cross Assemblerm Compiler, Debugger, Simulator, In – Circuit Emulator (ICE), Logic Analyser.

**UNIT V INTRODUCTION TO SYSTEM – ON – CHIP**

**6**

System Architecture: An Overview, Components of the System Processors, Memories and Interconnects, Processor Architectures, Memory and Addressing, System Level Interconnection –An Approach for SOC Design – Chip basics – Cycle Time – Die Area – Power and Cost – Area, Power and Time Trade – Offs in Processor Design – Reliability and Configurability – SOC Design Approach – Application Studies – AES, 3D Graphics Processor. Image Compression and Video Compression.

**Theory :30 Periods**

**LIST OF EXPERIMENTS**

ARM Assembly Programming

1. Write a program to add two 32-bit numbers stored in r0 and r1 registers and write the result to r2. The result is stored to a memory location. a) Run the program with breakpoint and verify the result b) Run the program with stepping and verify the content of registers at each stage.
2. Write ARM assembly to perform the function of division. Registers r1 and r2 contain the dividend and divisor, r3 contains the quotient, and r5 contains the remainder.

Embedded C Programming on ARM Cortex M3/M4 Microcontroller

1. Write a program to turn on green LED (Port B.6) and Blue LED (Port B.7) on STM32L-Discovery by configuring GPIO.

2. Transmit a string "Programming with ARM Cortex" to PC by configuring the registers of USART2. Use polling method.

ARM Cortex M3/M4 Programming with CMSIS

1. Write a program to toggle the LEDs at the rate of 1 sec using standard peripheral library. Use Timer3 for Delay.

2. Transmit a string "Programming with ARM Cortex" to PC by using standard peripheral library with the help of USART3. Use polling method.

**Practical: 30 Periods**

### **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**C01** Explain the architecture and features of ARM.

**C02** List the concepts of exception handling.

**C03** Write a program using ARM CORTEX M3/M4.

**C04** Learn the architecture of STM32L15XXX ARM CORTEX M3/M4.

**C05** Design an SoC for any application.

### **TEXT CUM REFERENCE BOOKS**

1. Joseph Yiu, The Definitive Guide to the ARM CORTEX M3/M4, Second Edition, Elsevier, 2010.(Unit – I, II)

2. Andrew N Sloss, Dominic Symes, Chris Wright, ARM System Developers Guide Designing and Optimising System Software, Elsevier, 2006 (Unit – III, IV)

3. Michael J Flynn and Wayne Luk, Computer System Design, System On Chip, Wiley India 2011.(Unit – V)

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>MOBILE APPLICATION DEVELOPMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV63X05</b>		2	0	2	3

**COURSE OBJECTIVES:**

- To facilitate students to understand android SDK
- To help students to gain basic understanding of Android application development
- To understand how to work with various mobile application development frameworks
- To inculcate working knowledge of Android Studio development tool
- To learn the basic and important design concepts and issues of development of mobile applications

**UNIT I MOBILE PLATFORM AND APPLICATIONS 6**

Mobile Device Operating Systems — Special Constraints & Requirements — Commercial Mobile Operating Systems — Software Development Kit: iOS, Android, BlackBerry, Windows Phone — MCommerce — Structure — Pros & Cons — Mobile Payment System — Security Issues

**UNIT II INTRODUCTION TO ANDROID 6**

Introduction to Android: The Android Platform, Android SDK, Eclipse Installation, Android Installation, Building your First Android application, Understanding Anatomy of Android Application, Android Manifest file.

**UNIT III ANDROID APPLICATION DESIGN ESSENTIALS 6**

Anatomy of Android applications, Android terminologies, Application Context, Activities, Services, Intents, Receiving and Broadcasting Intents, Android Manifest File and its common settings, Using Intent Filter, Permissions.

**UNIT IV ANDROID USER INTERFACE DESIGN & MULTIMEDIA 6**

User Interface Screen elements, Designing User Interfaces with Layouts, Drawing and Working with Animation. Playing Audio and Video, Recording Audio and Video, Using the Camera to Take and Process Pictures

**UNIT V ANDROID APIs 6**

Using Android Data and Storage APIs, Managing data using Sqlite, Sharing Data between Applications with Content Providers, Using Android Networking APIs, Using Android Web APIs, Using Android Telephony APIs, Deploying Android Application to the World.

**Theory :30 Periods**

**LIST OF EXPERIMENTS**

1. Develop an application that uses GUI components, Font, Layout Managers and event listeners.
2. Develop an application that makes use of databases
3. Develop a native application that uses GPS location information
4. Implement an application that creates an alert upon receiving a message
5. Develop an application that makes use of RSS Feed.
6. Create an application using Sensor Manager
7. Create an android application that converts the user input text to voice.
8. Develop a Mobile application for simple and day to day needs (Mini Project)

**Practical: 30 Periods**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**C01** Identify various concepts of mobile programming that make it unique from programming for other platforms.

**C02** Create, test and debug Android application by setting up Android development.

**C03** Demonstrate methods in storing, sharing and retrieving data in Android applications

**C04** Utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces

**C05** Create interactive applications in android using databases with multiple activities including audio, video and notifications and deploy them in marketplace

**TEXT CUM REFERENCE BOOKS:**

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>INDUSTRIAL IOT &amp; HEALTHCARE SYSTEMS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV63X06</b>		2	0	2	3

### **COURSE OBJECTIVES:**

- To teach key skills employed in the IIoT&IoRT space building applications.
- To give knowledge on Design suitable network architecture and use appropriate learning algorithm.
- To Comprehend IOT protocols
- To implement digital Twin
- To implement IOT systems for robotics

### **UNIT I INTRODUCTION TO INDUSTRIAL IOT 6**

Technical requirements, IoT Background-History and definition, IoT enabling factors, IoT applications, IoT key technologies, I-IoT, IoT and I-IoT – similarities and differences, Industry environments and scenarios covered by I-IoT.

### **UNIT II UNDERSTANDING THE INDUSTRIAL PROCESS AND DEVICES TECHNICAL REQUIREMENTS 6**

The industrial process-Automation in the industrial process, Control and measurement systems, Types of industrial processes.

### **UNIT III INDUSTRIAL DATA FLOW AND DEVICES 6**

Technical requirements, The I-IoT data flow in the factory, Measurements and the actuator chain Sensors, The converters - Digital to analogical, Analog to digital, Actuators, Controllers - Microcontrollers, Embedded microcontrollers, Microcontrollers with external memory, DSP's. Industrial protocols -Automation networks, the fieldbus, Developing Industrial IoT and Architecture Introduction to the I-IoT platform and architectures, OSGi, micro service, containers, and server less computing, The standard IoT flow.

### **UNIT IV INTRODUCTION TO IOT BASED HEALTH CARE 6**

Introduction to IoT applications in smart healthcare& their distinctive advantages - Patient Health Monitoring System (PHMS), Tele-Health, Tele-medicine, Tele-Monitoring, Mobile Health Things (m-health).

### **UNIT V IOT SMART SENSING HEATH CARE AND POWER CHALLENGE 6**

Concept of Generic Biomedical sensors, Smart Sensors: Monitor health parameters, Wearable ECG sensors, IoT Data Acquisition System, Energy harvesting, Battery based systems, Power management.

**Theory :30 Periods**

### **LIST OF EXPERIMENTS**

1. Analyze the technical requirements and key technologies of Industrial IoT (I-IoT), comparing its similarities and differences with traditional IoT, while exploring its applications and enabling factors.
2. Explore automation, control, and measurement systems in industrial processes, categorizing different types of industrial processes.
3. Investigate the industrial data flow in factories, focusing on sensors, converters, actuators, controllers, and industrial protocols, and introduce I-IoT platform architectures like OSGi and microservices.
4. Examine IoT applications in healthcare, including Patient Health Monitoring System (PHMS), Tele-Health, Tele-medicine, and Mobile Health Things (m-health), highlighting their advantages.
5. Implement smart sensing healthcare solutions using generic biomedical sensors, wearable ECG sensors, and IoT Data Acquisition Systems, while addressing power challenges through energy harvesting, battery-based systems, and power management techniques.

**Practical: 30 Periods**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01** Understand key skills employed in the IIoT&IoRT space building applications.
- C02** Design suitable network architecture and use appropriate learning algorithm.
- C03** Comprehend IOT protocols
- C04** Implement digital Twin
- C05** Implement IOT systems for robotics

**TEXT CUM REFERENCE BOOKS:**

6. "The Internet of Things: Do-It-Yourself at Home Projects for Arduino, Raspberry Pi and Beagle Bone Black", Donald Norris, 2014..

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>SMART CITIES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV63X07</b>		2	0	2	3

**COURSE OBJECTIVES:**

1. To understand the concept of a smart city and associated challenges.
2. To understand the latest technologies used in intelligent building.
3. To understand the process of planning and drafting a plan for a smart city.
4. To understand the importance of different smart systems.
5. To understand technologies, infrastructure, and the concept of planning and the latest methodology.

**UNIT I INTRODUCTION TO SMART CITIES 6**

Introduction to city planning: Concept, Principle stakeholders, key trends in smart cities developments.

**UNIT II SMART CITIES PLANNING AND DEVELOPMENT 6**

Understanding smart cities, Dimension of smart cities, Global Standards and performance benchmarks, Practice codes, Smart city planning and development, Financing smart cities development, Governance of smart cities.

**UNIT III PROJECT MANAGEMENT IN SMART CITIES 6**

Phases, Stages of project and work break down Structure, Project organization structure, Planning, Scheduling and CPM, Project cost analysis, resource allocation & leveling, Line of balancing technique, Project monitoring and control, Project risk management.

**UNIT IV GREEN BUILDING IN SMART CITIES 6**

Introduction to green buildings, Rating system, Energy saving system

**UNIT V CASE STUDY 6**

Smart environment, smart streetlight and smart water & waste management, Smart Road & Traffic (Live & Connected roads), Smart Parking (Connected Parking)

**Theory :30 Periods**

**LIST OF EXPERIMENTS**

Prepare a comprehensive project report by analysing the following aspects of a smart city.

1. Analyze key stakeholders and trends in smart city development.
2. Investigate global standards and benchmarks in smart city planning.
3. Implement project management phases and work breakdown structures for smart city projects.
4. Explore green building concepts and energy-saving systems in smart cities.
5. Conduct a case study on smart environment initiatives in urban areas.
6. Evaluate the implementation of smart streetlight and water/waste management systems.
7. Study live and connected road systems for smart traffic management.
8. Implement smart parking solutions using connected technologies.
9. Analyze the financing and governance structures of smart city projects.
10. Develop a comprehensive smart city plan integrating various aspects of planning, development, and management.

**Practical: 30 Periods**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- CO1** Understand the concept of a smart city and associated challenges.
- CO2** Understand the latest technologies used in intelligent building.
- CO3** Understand the process of planning and drafting a plan for a smart city.
- CO4** Understand the importance of different smart systems.

**C05** Understand technologies, infrastructure, and the concept of planning and the latest methodology.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>Course Code</b>	<b>ADVANCED INTELLIGENT SYSTEM</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV63X08</b>		2	0	2	3

**COURSE OBJECTIVES:**

- Introduce students to the concepts of machine learning and deep learning and their significance in developing intelligent systems.
- Provide hands-on experience with Python programming for implementing machine learning algorithms such as linear regression, polynomial regression, clustering, and classification.
- Explore emerging trends in hardware architectures for deep learning, including quantization, precision reduction, and hardware-software co-design.
- Enable students to develop Python applications specifically for deep learning tasks, focusing on CNN and YOLO algorithms.
- Engage students in case studies to apply their knowledge and skills in developing intelligent systems for various domains, including power systems, smart energy, motor control, and Industry 4.0 and Industry 5.0 applications.

**UNIT I: INTELLIGENT SYSTEMS AND PYTHON PROGRAMMING 6**

Introduction to Machine Learning and Deep Learning -Performance Improvement with Machine Learning -Building Intelligent Systems -Introduction to Python-Python Programming

**UNIT II: PYTHON FOR ML 6**

Python Application of Linear Regression and Polynomial Regression using SciPy -Interpolation, Overfitting, and Underfitting concepts & examples using SciPy -Clustering and Classification using Python

**UNIT III: EMERGING TRENDS IN HARDWARE ARCHITECTURES FOR DEEP LEARNING 6**

Quantization and Precision Reduction Techniques -Hardware-aware Neural Architecture Hardware-software Co-design for Deep Learning Systems -Memory Hierarchy and Cache Optimization for Deep Learning -Parallelization and Distributed Training of Deep Learning Models - Energy-efficient Deep Learning Hardware Architectures - Hardware Acceleration for Specific Deep Learning Applications (e.g., Natural Language Processing, Computer Vision)

**UNIT IV: PYTHON FOR DL 6**

Python Applications for Deep Learning -Python for CNN and YOLO

**UNIT V: CASE STUDIES 6**

Development of Intelligent System for Power System Protection -Smart Energy-IOE Internet of Everything)-Motor Control -BMS (Building Management Systems) - Intelligent Systems for Industry 4.0 and Industry 5.0

**Theory: 30 Periods**

**LIST OF EXPERIMENTS**

1. Implement linear regression and polynomial regression in Python using SciPy, analyze concepts like interpolation, overfitting, and underfitting, then explore clustering and classification algorithms.

2. Investigate quantization and precision reduction techniques in hardware architectures for deep learning, focusing on hardware-software co-design and memory hierarchy optimization.
3. Develop Python applications for deep learning, specifically for Convolutional Neural Networks (CNN) and You Only Look Once (YOLO) algorithms.
4. Create intelligent systems for various applications such as power system protection, smart energy management, motor control, and building management systems (BMS), exploring Industry 4.0 and Industry 5.0 scenarios.

**Practical: 30 Periods**

### **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

**C01:** Gain proficiency in the Python programming language and learn how to apply it in the context of intelligent systems.

**C02:** Learn Python libraries such as NumPy, Pandas, and scikit-learn to preprocess data, build and train Machine Learning models, and evaluate their performance.

**C03:** Learn Deep Learning libraries such as TensorFlow or PyTorch to build, train, and evaluate Deep Learning models for tasks such as image classification, natural language processing, and computer vision.

**C04:** Learn hardware components, such as processors, memory, and accelerators, and how they are integrated.

**C05:** Learn intelligent systems implementations, examine their design choices, evaluate their performance, and understand the challenges.

### **TEXT CUM REFERENCE BOOKS:**

1. "Intelligent Systems: Principles, Paradigms, and Pragmatics" by Rajendra P. Srivastava (Published in 2013)
2. "Intelligent Systems: A Modern Approach" by Thomas Bäck, David B. Fogel, and Zbigniew Michalewicz (Published in 2000)
3. "Intelligent Systems: Modeling, Optimization, and Control" by Grzegorz Bocewicz and Konrad Jackowski (Published in 2016)
4. "Intelligent Systems: Architecture, Design, and Control" by Janos Sztipanovits and Gabor Karsai (Published in 2018)
5. "Intelligent Systems: Concepts and Applications" by Veera M. Boddu (Published in 2017)

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

## Vertical 7: HIGH END COMPUTING

<b>Course Code</b>	<b>PARALLELPROCESSING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV73X01</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

### COURSE OBJECTIVES:

1. To study the scalability and clustering issues and the technology necessary for them.
2. To understand the technologies enabling parallel computing.
3. To study the different types of interconnection networks.
4. To study the different parallel programming models.
5. To study the software support needed for shared memory programming.

### UNIT I: INTRODUCTION

9

Introduction to Parallel Processing - Shared Memory Multiprocessing -Distributed Shared Memory - Message Passing Parallel Computers

### UNIT II: PROCESSES & SHARED MEMORY PROGRAMMING

9

Processes -Shared Memory Programming -General Model of Shared Memory Programming  
Process Model Under UNIX

### UNIT III: BASIC PARALLEL PROGRAMMING TECHNIQUES

9

Loop Splitting - Ideal Speedup -Spin-Locks, Contention, and Self-Scheduling -Loop Scheduling

### UNIT IV: THREAD-BASED IMPLEMENTATION

9

Thread Management -The POSIX Thread Application Programmer Interface -Synchronization Primitives in POSIX -Example with Threads

### UNIT V: ALGORITHMS FOR PARALLEL MACHINES

9

Models of Computation -Analysis of Parallel Algorithms-Prefix Computation-Histogram Computation

**THEORY PERIODS: 45**

### COURSE OUTCOMES:

**Upon completion of this course, the students will be able to:**

- CO1** Understand the basic concepts of Parallel Processing.
- CO2** Apply the concepts of processes and shared memory programming.
- CO3** Use basic parallel programming techniques.
- CO4** Implement thread-based methods.
- CO5** Understand parallel algorithms for tightly coupled and loosely coupled parallel systems for various applications.

### TEXTBOOKS:

1. "Introduction To Parallel Programming" by Steven Brawer.
2. "Introduction to Parallel Computing" by Ananth Grama, Anshul Gupta, George Karypis, Vipin Kumar, Pearson Publication.

3. "Introduction To Parallel Processing" by M. Sasikumar, Dinesh Shikhare, and P. Ravi Prakash.
4. "Introduction to Parallel processing" by M. Sasikumar, D. Shikhare, and P. Ravi Prakash, PHI, 2006.

**TOTAL PERIODS: 45**

<b>Course Code</b>	<b>HIGH-PERFORMANCE COMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV73X02</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To study various computing technology architectures.
- To know emerging trends in computing technology.
- To highlight the advantage of deploying computing technology.

**UNIT I: Cluster Computing and its Architecture 9**

Ease of Computing -Scalable Parallel Computer Architecture-Towards Low-Cost Parallel Computing & Motivation-Windows Opportunity -A Cluster Computer and Its Architecture Cluster Classification -Commodity Components for Clusters -Network Services/Communication SW -Cluster Middleware and Single Systems Image -Resource Management & Scheduling (RMS)

**UNIT II: Cluster Setup and Administration 9**

Introduction to Cluster Setup and Administration -Setting up the cluster -Security- System Monitoring -System Tuning-Introduction to Grid and its Evolution -Beginning of the Grid-Building blocks of Grid-Grid Application and Grid Middleware-Evolution of the Grid: First, Second & Third Generation

**UNIT III: Cloud Definition and Management 9**

Introduction to Cloud Computing -Defining Clouds -Cloud Providers -Consuming Cloud Services - Cloud Models: IaaS, PaaS, SaaS -Inside the cloud -Administering cloud services, technical interface, and Cloud resources

**UNIT IV: Nature of Cloud 9**

Traditional Data Center-Cost of Cloud Data Center-Scaling computer systems-Cloud workload- Managing data on clouds-Public, private, and hybrid clouds

**UNIT V: Cloud Elements 9**

Infrastructure as a service -Platform as a service -Software as a service

**Theory PERIODS: 45**

**COURSE OUTCOMES:**

**Upon completion of this course, the students will be able to:**

1. Have basic knowledge of computing technology.
2. Understand the architecture of computing technology.
3. Know cloud computing service models.
4. Know about emerging trends in computing technology.
5. Understand big data and Hadoop architecture.

**TEXT CUM REFERENCE BOOKS:**

1. Ronald Krutz, "Cloud Security," Wiley India.
2. Cloud Computing, A Practical Approach, Anthony Velte, Toby Velte, Robert Elsenpeter, McGraw Hill.

**TOTAL PERIODS: 45**

<b>Course Code</b>	<b>PERVASIVE COMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV73X03</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To understand the characteristics and principles of Pervasive computing and the solutions that are in use.
- To realize the role of wireless protocols in shaping the future Internet.
- To design and implement pervasive applications.
- To give an introduction to the enabling technologies of pervasive computing.

**UNIT I: INTRODUCTION 9**

Pervasive Computing Principles and Characteristics -Architecture for Pervasive Computing Context Communication and Access Services

**UNIT II: PROTOCOLS 9**

Open Protocols - Service Discovery Technologies - Data Synchronization -Context-Aware Security

**UNIT III: TECHNOLOGIES 9**

Device Technology - Device Connectivity -Web Application Concepts -Voice Technologies

**UNIT IV: ARCHITECTURE 9**

Server-Side Programming in Java - Pervasive Web Application Architecture - Example Applications

**UNIT V: EXAMPLES 9**

Smart Tokens - Heating, Ventilation, and Air Conditioning Systems - Set-Top Boxes -Appliances and Home Networking -Residential Gateway -Automotive Computing - Entertainment Systems

**COURSE OUTCOMES:**

Upon completion of this course, the students will be able to:

**C01:** Outline the basic problems, performance requirements of pervasive computing applications, and the trends of pervasive computing and its impacts on future computing applications and society.

**C02:** Analyze and compare the performance of different data dissemination techniques and algorithms for mobile real-time applications.

**C03:** Analyze the performance of different sensor data management and routing algorithms for sensor networks.

**C04:** Develop an attitude to propose solutions with comparisons for problems related to pervasive computing systems through investigation.

**TOTAL PERIODS: 45**

<b>Course Code</b>	<b>PICO COMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV73X04</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

- Understanding PICO Computing Principles
- Exploring PICO Architecture
- Mastering PICO Programming Skills
- Examining PICO Operating Systems
- Investigating Advanced Topics in PICO Computing

**UNIT I: INTRODUCTION TO PICO COMPUTING 9**

Overview of PICO Computing - Historical perspective and evolution -Importance and applications in modern computing -Characteristics of PICO Computing systems.

**UNIT II: PICO ARCHITECTURE 9**

Basic principles of PICO architecture - Components and building blocks-PICO processors and memory -Parallelism and concurrency in PICO Computing

**UNIT III: PROGRAMMING FOR PICO COMPUTING 9**

PICO programming languages - PICO-specific programming paradigms Code optimization techniques for PICO systems -Case studies and examples

**UNIT IV: PICO OPERATING SYSTEMS 9**

Role of operating systems in PICO Computing - PICO OS design principles -Kernel architecture for PICO systems - Resource management and scheduling in PICO OS.

**UNIT V: ADVANCED TOPICS IN PICO COMPUTING 9**

Emerging trends in PICO Computing - Quantum aspects of PICO systems - PICO Computing in specific domains - Ethical considerations and challenges in PICO Computing.

**NUMBER OF THEORY PERIODS: 45**

**COURSE OUTCOMES:**

Upon completion of this course, the students will be able to:

**CO1:** Demonstrate Comprehensive PICO Computing Knowledge

**CO2:** Apply PICO Architecture Concepts

**CO3:** Develop Proficient PICO Programming Skills

**CO4:** Design and Analyze PICO Operating Systems

**CO5:** Critically Evaluate Advanced PICO Computing Concepts

**TEXTBOOKS:**

1. "Parallel Computer Architecture: A Hardware/Software Approach" by David Culler, Jaswinder Pal Singh, and Anoop Gupta
2. "Quantum Computing: A Gentle Introduction" by Eleanor G. Rieffel and Wolfgang H. Polak
3. "Computer Organization and Design: The Hardware/Software Interface" by David A. Patterson and John L. Hennessy
4. "Programming Massively Parallel Processors: A Hands-on Approach" by David B. Kirk and Wenmei W. Hwu

<b>Course Code</b>	<b>NANOCOMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV73X05</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To understand the fundamental principles of Dielectrics and Electronic Structures.
- To know the construction and working of Logic Devices.
- To know the construction and working of mass storage devices.
- To study sensor arrays and Imaging systems.
- To know about various types of Displays.

**UNIT I: INTRODUCTION**

**9**

Dielectrics-Ferroelectrics-Electronic Properties and Quantum Effects-Magneto electronics Magnetism and Magnetotransport in Layered Structures-Organic Molecules-Neurons-Circuit and System Design

**UNIT II: LOGIC DEVICES**

**9**

Silicon MOSFETs-Novel Materials and Alternative Concepts-Ferroelectric Field Effect -Transistors-Quantum Transport devices Based on Resonant Tunneling-Single-Electron Devices for Logic Applications-Superconductor Digital Electronics-Quantum Computing Using Superconductors-Carbon Nanotubes for Data Processing-High-Permittivity Materials for DRAMs-Ferroelectric Random Access Memories-Magnetoresistive RAM

**UNIT III: MASS STORAGE DEVICES**

**9**

Hard Disk Drives -Magneto-Optical Discs -Rewriteable DVDs Based on Phase Change Materials - Holographic Data Storage -AFM-Based Mass Storage-Transmission on Chip and Board Level - Photonic Networks-Microwave Communication Systems -Neuroelectronic Interfacing: Semiconductor Chips with Ion Channels, Nerve Cells, and Brain

**UNIT IV: SENSOR ARRAYS AND IMAGING SYSTEMS**

**9**

Optical 3-D Time-of-Flight Imaging System - Pyroelectric Detector Arrays for IR Imaging Electronic Noses - 2-D Tactile Sensors and Tactile Sensor Arrays.

**UNIT V: DISPLAYS**

**9**

Liquid Crystal Displays - Organic Light Emitting Devices - Field-Emission and Plasma Displays - Electronic Paper.

**TOTAL PERIODS: 45**

**COURSE OUTCOMES:**

Upon completion of this course, the students will be able to:

CO1: To design the basic components in NanoComputing.

CO2: To construct the Logic Devices.

CO3: To design the storage devices.

CO4: To analyze different types of imaging systems.

CO5: To analyze the principles of Various Displays LCD, LED, and Plasma Displays.

<b>Course Code</b>	<b>FOG AND EDGE COMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV73X06</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To enhance real-time data processing and analytics at the network edge.
- To optimize resource utilization and reduce latency in fog computing environments.
- To improve scalability and flexibility for edge devices and applications.
- To enhance security and privacy for data processing at the edge.
- To facilitate seamless integration of fog and edge computing with cloud services.

**UNIT 1: INTRODUCTION TO FOG AND EDGE COMPUTING 9**

Definition and Fundamentals - Motivations and Advantages -Use Cases and Applications-Challenges and Limitations -Comparison with Cloud Computing .

**UNIT 2: ARCHITECTURES AND COMPONENTS 9**

Edge Computing Architecture Models - Fog Nodes and Infrastructure -Edge Device Types and Capabilities -Edge-to-Cloud Communication Models -Middleware and Software Frameworks

**UNIT 3: SECURITY AND PRIVACY IN EDGE COMPUTING 9**

Need for automata theory - Introduction to formal proof -Finite Automata (FA) -Deterministic Finite Automata (DFA)-Non-deterministic Finite Automata (NFA)-Edge-to-Cloud Communication Patterns

**UNIT 4: EDGE APPLICATION DEVELOPMENT 9**

Programming Models and Frameworks - Integration with IoT Devices - Edge Application - Deployment Strategies - Optimizing Edge Application Performance

**UNIT 5: PERFORMANCE OPTIMIZATION AND FUTURE TRENDS 9**

Performance Metrics and Optimization - Energy-Efficient Edge Architectures - Real-time Processing and Analytics - Scalability and Flexibility in Edge Architectures -Emerging Trends in Fog and Edge Computing

**NUMBER OF THEORY PERIODS: 45**

**SAMPLE LIST OF EXPERIMENTS:**

1. Design and deploy a fog computing architecture for a smart city application.
2. Optimize data processing algorithms for edge devices in a real-time monitoring system.
3. Evaluate resource utilization in a fog computing environment using simulation tools.
4. Implement security protocols for edge devices to protect sensitive data.
5. Develop a scalable edge computing solution for IoT devices in a manufacturing setting.
6. Integrate fog computing with cloud services to enhance overall system efficiency.
7. Perform a hands-on deployment of edge computing nodes in a network infrastructure.
8. Design and implement a fault-tolerant edge computing solution for critical applications.
9. Conduct performance testing to assess the latency reduction achieved through edge computing.
10. Create a comprehensive case study on the successful integration of fog and edge computing in a specific industry.

**COURSE OUTCOMES:**

Upon completion of this course, the students will be able to:

**C01:** Proficiently deploy and manage fog and edge computing solutions in diverse environments.

**C02:** Demonstrate expertise in optimizing data processing and analytics at the network edge.

**C03:** Evaluate and enhance resource efficiency for fog computing deployments.

**C04:** Implement robust security measures for safeguarding edge computing data.

**C05:** Successfully integrate fog and edge computing technologies to address real-world challenges.

<b>Course Code</b>	<b>AI AND CLOUD COMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AMPEV73X07</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

1. Understand the fundamentals of basic AI approaches.
2. Learn techniques to identify problem-solving agents.
3. Understand the concept of cloud computing.
4. To appreciate the evolution of the cloud from the existing technologies.
5. To have knowledge of the various issues in cloud computing.

**UNIT I: INTELLIGENT AGENTS 9**

Introduction to AI-Agents and Environments-Concept of Rationality-Nature of Environments-Structure of Agents -Problem Solving Agents-Search algorithms-Uninformed search strategies-Constraint satisfaction problems

**UNIT II: PROBLEM SOLVING & LOGICAL REASONING 9**

Heuristic search strategies - Heuristic functions -Knowledge-based agents-Propositional logic-Propositional theorem proving-Agents based on propositional logic-First-order logic-Syntax and semantics -Inferences in first-order logic -Forward chaining -Backward chaining-Resolution.

**UNIT III: CLOUD COMPUTING INTRODUCTION 9**

Introduction to Cloud Computing - Definition of Cloud -Evolution of Cloud Computing -Underlying Principles of Parallel and Distributed Computing -Cloud Characteristics -Elasticity in Cloud -On-demand Provisioning

**UNIT IV: CLOUD ENABLING TECHNOLOGIES 9**

Service Oriented Architecture - REST and Systems of Systems -Web Services-Publish-Subscribe - Model Basics of Virtualization-Types of Virtualization-Implementation Levels of Virtualization Virtualization Structures-Tools and Mechanisms-Virtualization of CPU, Memory, I/O Devices-Virtualization Support and Disaster Recovery.

**UNIT V: CLOUD ARCHITECTURE, SERVICES AND STORAGE 9**

Layered Cloud Architecture Design - NIST Cloud Computing Reference Architecture-Public, Private and Hybrid Clouds -IaaS, PaaS, SaaS-Architectural Design Challenges-Cloud Storage-Storage-as-a-Service-Advantages of Cloud Storage-Cloud Storage Providers-S3.

**NUMBER OF THEORY PERIODS: 45**

**COURSE OUTCOMES:**

Upon completion of this course, the students will be able to:

- C01:** Learn the intelligent agent frameworks.
- C02:** Apply problem-solving techniques and CSP techniques.
- C03:** Articulate the main concepts, key technologies, strengths, and limitations of cloud computing.
- C04:** Learn the key and enabling technologies that help in the development of the cloud.

**C05:**Develop the ability to understand and use the architecture of compute and storage cloud, service and delivery models.

<b>AMPEV73X08</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

1. To introduce the building blocks of Quantum computers and highlight the paradigm change between conventional computing and quantum computing.
2. To understand the Quantum state transformations and the algorithms.
3. To understand entangled quantum subsystems and properties of entangled states.
4. To explore the applications of quantum computing.

**UNIT I: QUANTUM BUILDING BLOCKS 9**

The Quantum Mechanics of Photon Polarization-Single-Qubit Quantum Systems-Quantum State Spaces-Entangled States-Multiple-Qubit Systems-Measurement of Multiple-Qubit States-EPR Paradox and Bell's Theorem-Bloch sphere.

**UNIT II: QUANTUM STATE TRANSFORMATIONS 9**

Unitary Transformations-Quantum Gates-Unitary Transformations as Quantum Circuits-Reversible Classical Computations to Quantum Computations-Language for Quantum Implementations

**UNIT III: QUANTUM ALGORITHMS 9**

Computing with Superpositions-Quantum Subroutines-Quantum Fourier Transformations-Shor's Algorithm and Generalizations-Grover's Algorithm and Generalizations.

**UNIT IV: ENTANGLED SUBSYSTEMS AND ROBUST QUANTUM COMPUTATION 9**

Quantum Subsystems-Properties of Entangled States-Quantum Error Correction-Graph states and codes-CSS Codes-Stabilizer Codes-Fault Tolerance and Robust Quantum Computing.

**UNIT V: QUANTUM INFORMATION PROCESSING 9**

Limitations of Quantum Computing-Alternatives to the Circuit Model of Quantum Computation-Quantum Protocols-Building Quantum Computers-Simulating Quantum Systems-Bell states-Quantum teleportation-Quantum Cryptography-No-cloning theorem.

**TOTAL PERIODS: 45**

**COURSE OUTCOMES:**

Upon completion of this course, the students will be able to:

- C01:** Understand the basic principles of quantum computing.
- C02:** Gain knowledge of the fundamental differences between conventional computing and quantum computing.
- C03:** Understand several basic quantum computing algorithms.
- C04:** Understand the classes of problems that can be expected to be solved well by quantum computers.
- C05:** Simulate and analyze the characteristics of Quantum Computing Systems.

Course Code	<b>LEAN CONCEPTS, TOOLS AND PRACTICES</b>	L	T	P	C
MEOE3601		3	0	0	3

### COURSE OBJECTIVES:

- To impart knowledge about the basics of lean principles, tools and techniques, and implementation in the construction industry.

### UNIT I Introduction 9

Introduction and overview of the construction project management - Review of Project Management & Productivity Measurement Systems - Productivity in Construction - Daily Progress Report-The state of the industry with respect to its management practices -construction project phases - The problems with current construction management techniques.

### UNIT II Lean Management 9

Introduction to lean management - Toyota's management principle-Evolution of lean in construction industry - Production theories in construction –Lean construction value - Value in construction - Target value design - Lean project delivery system- Forms of waste in construction industry - Waste Elimination.

### UNIT III Core Concepts in Lean 9

Concepts in lean thinking – Principles of lean construction – Variability and its impact – Traditional construction and lean construction – Traditional project delivery - Lean construction and workflow reliability – Work structuring – Production control.

### UNIT IV Lean Tools and Techniques 9

Value Stream Mapping – Work sampling – Last planner system – Flow and pull based production – Last Planner System – Look ahead schedule – constraint analysis – weekly planning meeting- Daily Huddles – Root cause analysis – Continuous improvement – Just in time.

### UNIT V Lean Implementation in Construction Industry 9

Lean construction implementation- Enabling lean through information technology - Lean in design - Design Structure - BIM (Building Information Modelling) - IPD (Integrated Project Delivery) – Sustainability through lean construction approach.

**TOTAL: 45 PERIODS**

### COURSE OUTCOMES:

- CO1: Explains the contemporary management techniques and the issues in present scenario.
- CO2: Apply the basics of lean management principles and their evolution from manufacturing industry to construction industry.
- CO3: Develops a better understanding of core concepts of lean construction tools and techniques and their importance in achieving better productivity.
- CO4: Apply lean techniques to achieve sustainability in construction projects.
- CO5: Apply lean construction techniques in design and modeling.

Course Code	<b>MACHINE LEARNING FOR SMART MANUFACTURING</b>	L	T	P	C
MEOE3609		3	0	0	3

**COURSE OBJECTIVES:**

Impart knowledge of smart manufacturing for industry 4.0 for making student innovative.

**UNIT I Industry 4.0**

**9**

Concept, Globalization and emerging issues, The Fourth Revolution, LEAN manufacturing, Smart and connected business perspectives, Smart factories.

**UNIT II Automation**

**9**

Programable Logic Controller (PLC) and its Programming software, Communication of different devices with PLC, Sensor, Smart Sensor, HMI design, Cyber Physical System – key components, ISA-95 architecture, CPS-5C architecture, Concept of Digit Twin.

**UNIT III Communication**

**9**

Protocols – MQTT, OPC UA, EtherNet/IP, Profinet, EtherCAT, etc; MQTT – History, MQTT broker, Message types, Quality of Service (QoS), Application; OPC UA – History, Specification, Client, Server, Programming with – Free and open-source software, Propriety software; Augmented Reality.

**UNIT IV IoT Platform**

**9**

Data Modelling, IoT platforms – Thing, basic functionalities, Abstract definition of Thing, Networks, etc; IoT Gateway, Machine interfaces – Cloud-based Mosquitto brokers, Programming with – Free and open-source software, Propriety software.

**UNIT V Machine Learning Foundation**

**9**

Learning algorithms – Supervised, Unsupervised, Self learning, Feature learning, etc. Models – Artificial Neural Networks, Decision trees, Regression analysis, Genetic algorithms, etc.; Programming with – Free and open-source software, Propriety software.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

On successful completion of this course, the student will be able to

- Introduce concept of Industry 4.0 for Smart Manufacturing.
- Understand use various hardware used in Smart Manufacturing.
- Understand need of various communication protocols. hardware and software, IoT Layers and their relative importance.
- Understand cloud-computing IoT platform for Smart Manufacturing.
- Understand machine learning to make smart factories.
- Understand application of hardware, communication protocol, IOT platform, machine learning etc. to implement IoT for smart manufacturing for the need of Industry 4.0.

Course Code	<b>Life cycle assessment</b>	L	T	P	C
CEOE3602		3	0	0	3

### **COURSE OBJECTIVES:**

The main objectives of this course are to:

- To impart knowledge and skills on the concept and methodology of Life Cycle Assessment as per international standards and its potential applications
- To develop sustainable products and promote sustainable consumption.
- Understanding of the principles, methodologies, and techniques involved in Life Cycle Assessment (LCA).
- Develop the ability to identify, quantify, and assess the environmental impacts associated with various stages of a product or system's life cycle.
- Learn how to interpret LCA results and communicate findings effectively, including understanding the significance of different impact categories.

### **Course Description**

This course provides an in-depth exploration of the principles, methodologies, and applications of LCA, equipping students with the knowledge and skills necessary to conduct comprehensive environmental assessments and make informed decisions to promote sustainability.

### **Prerequisites**

- Familiarity with the concept of life cycle thinking and systems theory.
- Understanding of fundamental environmental science concepts such as ecology, environmental impacts, and sustainability principles provides a foundational knowledge base for studying LCA.

### **UNIT I Life Cycle Thinking and Life Cycle Management**

**9**

Introduction to Life Cycle Thinking – Industrial ecology – Life cycle management (LCM) and Stakeholder Expectations - LCM drivers and issues - materials flow analysis - Life cycle of Products and services- International organizations and networks - History and definition of LCA - analytical tools for product and service systems ---Value creation along the life cycle– technical characteristics – applications – limitations

### **UNIT II LCA Goal, Scope and Inventory**

**9**

ISO 14040 framework for LCA - Life cycle goal and scope definition - function, functional unit and reference flow System boundaries, data categories, inputs and outputs, data quality, critical review and other procedural aspects - Inventory Analysis: Raw Material Extraction and Processing , Manufacturing and Production , Product Use and Consumption , End-of-life Management, Transportation and Distribution - Dealing with Allocation Issues - Solutions to the multi functionality problem - Flow diagram - Format and data categories - Attributional versus consequential LCI – LCA software and database - Data quality - Data collection and relating data to unit processes – Data validation - Cut-off and data estimation .

### **UNIT III Life Cycle Impact Analysis and Interpretation**

**9**

Characterization factors and principle of characterization - Selection of impact categories, category indicators and characterization models – Classification -Characterization - Optional elements - normalization , grouping, weighting ,data quality analysis - Characterization models – Impact assessment Case studies -Simplified/streamlined Life Cycle Assessments – procedural approaches, numerical approaches - Examples of numerical approaches - contribution analysis, perturbation analysis, uncertainty - analysis, comparative analysis, key issue analysis – Treatment of uncertainties - Elements in uncertainty handling - Sensitivity of LCA results – Sustainability analysis - Extending

LCA - economic dimension, social dimension - Life cycle costing – Eco efficiency - Combining LCA and LCC – Case studies

#### **UNIT IV Design for Environment and Ecolabelling**

9

Sustainable consumption – Eco-efficiency - green consumerism - product stewardship and green engineering - Extended producer responsibility – Design For Environment Strategies, Practices, Guidelines, Methods, And Tools .Eco design strategies –Design for Disassembly - Dematerialization, re materialization, trans materialization – Green procurement and green distribution - Analysis framework for reuse and recycling – Typical constraints on reuse and recycling - Communication of Life Cycle Information - Indian eco mark scheme – Environmental product declarations – Environmental marketing

#### **UNIT V LCA Softwares and Case Studies**

9

LCA Softwares - LCA Software Demo: SimaPro, GREET, BEES, CMU EIO,GABI - Advances in LCA: Hybrid LCA, Thermodynamic LCA - LCA case studies on Product Design, Product Improvement, Product Comparison and Policy development.

#### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, online resources and tutorials

#### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

#### **COURSE OUTCOMES:**

OUTCOMES: Upon completion of the course, the students will be able to:

- CO1: Explain the various functional elements of Life Cycle Analysis and Design for Environment
- CO2: Apply the knowledge of science and engineering fundamentals to characterize the environmental interactions of products and services
- CO3: Design of engineering systems taking into account the material flow and pollutant interactions between engineering decisions and the environment
- CO4: Select appropriate LCA tools to support product/process design and decision making, taking into account the impact of the solutions in a sustainability context
- CO5: Evaluate generative models using appropriate metrics and critically analyse the ethical implications, privacy concerns, and societal impact of generative AI technologies.

#### **TEXT BOOKS:**

1. Ralph Horne, Tim Grant, Karli Verghese, Life Cycle Assessment: Principles, Practice and Prospects, Csiro Publishing, 2009.

4. European Commission - Joint Research Centre - Institute for Environment and Sustainability: International Reference Life Cycle Data System (ILCD) Handbook – General guide for Life Cycle Assessment - Detailed guidance. Luxembourg. European Union; 2010.
5. Catherine Benoit, UQAM/CIRAIG, and Bernard Mazijn, Guidelines for Social Life Cycle Assessment of Products, United Nations Environment Programme, 2009

**TOTAL: 45 PERIODS**

**YouTube Resources:**

1. **Sustainable Minds** - Sustainable Minds is a provider of cloud-based software and services for sustainable product development.
2. **Life Cycle Assessment – SimaPro** - SimaPro is one of the leading software tools for conducting Life Cycle Assessments.
3. **European Commission – JRC** - The Joint Research Centre (JRC) of the European Commission produces research and technical reports on a wide range of topics, including environmental sustainability and Life Cycle Assessment.
4. **Life Cycle Initiative** - The Life Cycle Initiative, hosted by the United Nations Environment Programme (UNEP), promotes the use of life cycle approaches for sustainable development.
5. **LCA Learning** - This channel offers various educational videos on Life Cycle Assessment, including tutorials, case studies, and discussions on LCA methodology and applications:

Course Code	<b>Environmental Impact Assessment</b>	L	T	P	C
CEOE3605		3	0	0	3

### **COURSE OBJECTIVES:**

The main objectives of this course are to:

- To expose the students to the need, methodology, documentation and usefulness of environmental impact assessment and to develop the skill to prepare environmental management plan.
- To participate in the performance of an environmental assessment process (EIA or SEA), given the disciplinary knowledge and skills in natural sciences and engineering the student have achieved in other courses.

### **Course Description**

This course provides an introduction to the theory and practical applications of environmental impact. Students will learn the fundamental concepts and techniques related to environmental impact and gain hands-on experience with creating and using environmental impact assessment.

### **Prerequisites**

- Basic knowledge of environmental impact assessment.
- Familiarity with an environmental issues

### **UNIT I Introduction**

**9**

Historical development of Environmental Impact Assessment (EIA). Environmental Clearance- EIA in project cycle. legal and regulatory aspects in India – types and limitations of EIA –EIA process screening – scoping - terms of reference in EIA- setting – analysis – mitigation. Cross sectoral issues –public hearing in EIA- EIA consultant accreditation.

### **UNIT II Impact Identification And Prediction**

**9**

Matrices – networks – checklists – cost benefit analysis – analysis of alternatives – expert systems in EIA. Prediction tools for EIA – mathematical modelling for impact prediction – assessment of impacts – air – water – soil – noise – biological -- cumulative impact assessment

### **UNIT III Socio-Economic Impact Assessment**

**9**

Socio-economic impact assessment - relationship between social impacts and change in community and institutional arrangements. factors and methodologies- individual and family level impacts. communities in transition-rehabilitation

### **UNIT IV EIA Documentation And Environmental Management Plan**

**9**

Environmental management plan - preparation, implementation and review – mitigation and rehabilitation plans – policy and guidelines for planning and monitoring programmes – post project audit – documentation of EIA findings – ethical and quality aspects of environmental impact assessment

### **UNIT V Case Studies**

**9**

Mining, power plants, cement plants, highways, petroleum refining industry, storage & handling of hazardous chemicals, common hazardous waste facilities, CETPs, CMSWMF, building and construction projects.

## Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## COURSE OUTCOMES:

**OUTCOMES:** Upon completion of the course, the students are expected to be able to:

C01: Carry out scoping and screening of developmental projects for environmental and social Assessments

C02: Explain different methodologies for environmental impact prediction and assessment.

C03: Assessing socio-economic investigation of the environment as a project.

C04: Plan environmental impact assessments and environmental management plans.

C05: Knowledge to prepare environmental impact assessment reports for various projects.

## TEXT BOOKS:

1. Canter, L.W., "Environmental Impact Assessment", McGraw Hill, New York. 1996.
2. Lawrence, D.P., "Environmental Impact Assessment – Practical solutions to recurrent problems", Wiley-Interscience, New Jersey. 2003 .

## REFERENCES:

1. World Bank –Source book on EIA
2. Cutter, S.L., "Environmental Risk and Hazards", Prentice-Hall of India Pvt. Ltd., New Delhi, 1999.
3. Kolluru Rao, Bartell Steven, Pitblado R and Stricoff "Risk Assessment and Management Handbook", McGraw Hill Inc., New York, 1996.
4. K.V.Raghavan and A A. Khan, "Methodologies in Hazard Identification and Risk Assessment", Manual by CLRI, 1990.

**TOTAL :45 PERIODS**

## YouTube Resources:

1. **IIT Roorkee**- EIA is basically a tool used to assess the positive and negative environmental, economic and social impacts of a project.
2. **Science Sauce** - Explaining tricky Science concepts in as little time as possible. All content created by Alex Nixon..
3. **Border Archaeology** - They are mandated by The Town and Planning Regulations 2011 for projects falling under Schedule 1 and may also be sought by a local planning authority for Schedule 2-type projects following project screening and scoping..
4. **Sustainable Technology Solutions** - The relevance of EIA lies in its ability to ensure that projects are designed and implemented in a way that minimizes environmental harm and promotes sustainable development.
5. **Sigma Earth** - Climate change refers to long-term shifts in temperatures and weather patterns. Human activities have been the main driver of climate change, primarily due to the burning of fossil fuels like coal, oil and gas..

<b>Course Code</b>	<b>EMOTIONAL INTELLIGENCE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>CSOE3606</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

1. To know the theoretical background of cognition.
2. To understand the link between cognition and computational intelligence.
3. To explore probabilistic programming language.
4. To study the computational inference models of cognition.
5. To study the computational learning models of cognition.

**UNIT I INTRODUCTION TO EMOTIONAL INTELLIGENCE 9**

Meaning of Emotions, Emotional Intelligence- Importance- Models of Emotional Intelligence- Social Intelligence- IQ and EQ- Self Awareness- Social Skills – Relationship Management- EI and Motivation.

**UNIT II UNDERSTANDING EMOTIONS 9**

The Brain and Emotion - The Relationship of Mood and Emotion - The Role of Emotion in Organizational Health and the Bottom Line - Types of Emotions- Control of Emotions  
Gender Differences in Emotion - Impulse Control- Marshmallow Experiment- Negative and Positive Emotions – Emotion and Health

**UNIT III MANAGING EMOTIONS 9**

Learning EI – Emotional Self Awareness – EI Assessment Tools - Emotional Intelligence and Psychological Adjustment - Issues in Anxiety, Stress, Depression, Anger, Self Esteem and Self Management Empathy

**UNIT IV EI PRACTICE IN ORGANIZATIONS 9**

Emotional Intelligence and Decision Making - EI and Personality- Work Frustrations- EI and Work Performance- EI and Leadership - EI and Job Stress – EI and Information Processing - EI and Communication – Goal Conflict – EI and Conflict Resolution – EI and Work Place Diversity – Group EI – Star Performers

**UNIT V EMOTIONAL COMPETENCE 9**

Developing EI in Organization – Transformation and Change – Training, Transfer, Maintenance and Evaluating Change - Emotional Quality Management.

**NUMBER OF THEORY PERIODS: 45**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01 Understand the underlying theory behind cognition.
- C02 Connect to the cognition elements computationally.
- C03 Implement mathematical functions through WebPPL.
- C04 Develop applications using cognitive inference model.
- C05 Develop applications using cognitive learning model.

Course Code	<b>TECHNICAL WRITING</b>	L	T	P	C
MEOE3701		3	0	0	3

**COURSE OBJECTIVES:**

- To understand the present complex information in a clear and easily understandable way to the target audience, which involves breaking down intricate concepts into simpler terms and providing clear explanations.

**UNIT I Introduction to Technical Writing 9**

Characteristics of Technical Writing - Rhetorical awareness - Ethics - Steps in the technical writing process- Prewriting for technical documents-Understanding audience and purpose, Primary and secondary research - Surveys and interviews - Research methods

**UNIT II Components of Technical Documents 9**

Introductions – Abstracts – Definitions – Titles and headings - Effective visual design – Summaries – Technical descriptions – conclusions

**UNIT III Types of Technical Report 9**

Formal Technical Reports - Progress and research reports - Incidence reports - Feasibility reports - Evaluation reports – Analytical and informational reports - Executive summaries.

**UNIT IV Language 9**

Style – Accuracy – Brevity – Clarity – Tone – Vocabulary – Formal and impersonal language – Structure of the report - Plagiarism.

**UNIT V Writing Proposals 9**

Nature and significance –Types of proposals - Persuasive elements - Request for proposals – Structure and parts of a proposal

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:** On successful completion of this course, the student will be able to

- CO1: Acquire a working knowledge of writing strategies, formats and templates of professional writing.  
 CO2: Analyse communication-related problems of technical documents from number of genres.  
 CO3: Use visuals to communicate a large amount of information quickly and efficiently  
 CO4: Enhance writing skills to produce effective reports confidently

**TEXT BOOKS:**

Course Code	<b>Drinking water supply and treatment</b>	L	T	P	C
EEOE3704		3	0	0	3

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- To equip the students with the principles and design of water treatment units and distribution system.
- To understand the sources of water and their characteristics.
- To gain knowledge of conveyance systems, including pipes, conduits, and pumps.
- To understand the principles and processes of water treatment, including coagulation, filtration, and disinfection.
- To explore advanced water treatment technologies such as desalination, membrane systems, and ion exchange.

**Course Description**

This course provides students with an in-depth understanding of water supply systems, including the planning, design, and operation of water sources, conveyance systems, treatment plants, and distribution networks. Students will learn about the characteristics of different water sources, the design of intake structures and transmission mains, principles and processes of water treatment, advanced water treatment technologies, and the design and operation of water distribution systems.

**Prerequisites**

- Basic knowledge of fluid mechanics and hydraulics.
- Understanding of environmental science and water quality parameters.
- Familiarity with engineering design principles.

**UNIT I Sources of Water 9**

Public water supply system – Planning, Objectives, Design period, Population forecasting; Water demand – Sources of water and their characteristics, Surface and Groundwater – Impounding Reservoir – Development and selection of source – Source Water quality – Characterization – Significance – Drinking Water quality standards.

**UNIT II Conveyance from the Source 9**

Water supply–in take structures–Functions; Pipes and conduits for water –Pipe materials – Hydraulics of flow in pipes –Transmission main design – Laying, jointing and testing of pipes – appurtenances – Types and capacity of pumps – Selection of pumps and pipe materials.

**UNIT III Water Treatment 9**

Objectives–Unit operations and processes–Principles, functions, and design of water treatment plant units, aerator or flash mixers, Coagulation and flocculation – sand filters–Disinfection– Construction, Operation and Maintenance aspects.

**UNIT IV Advanced Water Treatment 9**

Water softening – Desalination- R.O. Plant – demineralization – Adsorption – Ion exchange– Membrane Systems – Iron and Manganese removal – Defluoridation – Construction and Operation and Maintenance aspects

**UNIT V Water Distribution and Supply 9**

Requirements of water distribution – Components – Selection of pipe material – Service reservoirs – Functions – Network design – Economics – Computer applications – Appurtenances–Leak detection Principles of design of water supply in buildings – House service connection–Fixtures and fittings ,systems of plumbing and types of plumbing

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

**OUTCOMES:** Upon completion of the course, the students will be able to:

- CO1 An understanding of water quality criteria and standards, and their relation to public health
- CO2 The ability to design the water conveyance system
- CO3 The knowledge in various unit operations and processes in water treatment
- CO4 An ability to understand the various systems for advanced water treatment

**TOTAL: 45 PERIODS**

Course Code	<b>Geographic Information System</b>	L	T	P	C
CEOE3704		3	0	0	3

### **COURSE OBJECTIVES:**

The main objectives of this course are to:

- Introduce concepts of Cartography and GIS
- Expose the process of map making and production
- Introduce GIS data structures, data input and data presentation Apply principles of sustainability and resilience to civil infrastructure projects.

### **Course Description**

This course provides an introduction on concepts and principles of mapping the surface components, geographical terrain projection, Data inputs and Topology.

### **Prerequisites**

- Basic knowledge in Engineering and Geographic surveys.
- Familiarity with computer software for engineering analysis and design, such as AutoCAD, QGIS (Geographic Information Systems).

### **UNIT I Elements Of Cartography 9**

Definition of Cartography – Maps – Functions – Uses and Types of Maps – Map Scales and Contents – Map Projections – Shape, Distance, Area and Direction Properties – Perspective and mathematical Projections – Indian Maps and Projections – Map Co-ordinate System – UTM and UPS References.

### **UNIT II Map Design and Production 9**

Elements of a Map – Map Layout Principles – Map Design Fundamentals – Symbols and Conventional Signs – Graded and Ungraded Symbols – Color Theory – Colours and Patterns in Symbolization – Map Lettering – Map Production – Map Printing – Colours and Visualization – Map Reproduction – Map Generalization – Geometric Transformations – Bilinear and Affine Transformations.

### **UNIT III Fundamentals Of GIS 9**

Introduction to GIS – Definitions – History of GIS – Components of a GIS – Hardware, Software, Data, People, Methods – Introduction to data quality – Types of data – Spatial, Attribute data – types of attributes – scales/levels of measurements – spatial data models – Raster Data Structures – Raster Data Compression – Vector Data Structures – Raster Vs Vector Models – TIN and GRID data models.

### **UNIT IV Data Input And Topology 9**

Image Scanner – Raster Data Input – Raster Data File Formats – Georeferencing – Vector Data Input – Digitizer- Datum Projection and Reprojection – Coordinate Transformation – Topology – Adjacency, Connectivity and containment – Topological Consistency – Non topological file formats – Attribute Data Linking – Linking External Databases – GPS Data Integration – Raster to Vector and Vector to Raster Conversion.

### **UNIT V Data Quality And Output 9**

Assessment of Data Quality – Basic Aspects – Completeness, Logical Consistency, Positional Accuracy, Temporal Accuracy, Thematic Accuracy and Lineage – Metadata – GIS Standards – Interoperability – OGC – Spatial Data Infrastructure – Data Output – Map Compilation – Chart / Graphs.

### **Course Format**

Lectures and discussions, Hands-on projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials.

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

**OUTCOMES:** Upon completion of the course, the student is expected to:

- CO1: Be familiar with appropriate map projection and co-ordinate system for production of Maps and shall able to compile and design maps for their required purpose.
- CO2: Be familiar with co-ordinate and Datum transformations
- CO3: Understand the basic concepts and components of GIS, the techniques used for storage of spatial data and data compression
- CO4: Understand the concepts of spatial data quality and data standard
- CO5: Understand the concept of spatial data inputs

### TEXT BOOKS:

1. Arthur H. Robinson et al, "Elements of Cartography", 7<sup>th</sup> Edition, Wiley, 2002.
2. Kang – Tsung Chang, "Introduction to Geographic Information Systems", McGraw Hill Publishing, Fourth Edition, 2017.
3. Ian Heywood, Sarah Cornelius, Steve Carver, Srinivasa Raju, "An Introduction to Geographical Information Systems, Pearson Education, Fourth Edition, 2011.

### REFERENCES:

1. John Campbell, "Introductory Cartography", Wm. C.BrownPublishers,3<sup>rd</sup> Edition,2004
2. Chor Pang LO, Albert K. W. Yeung, "Concepts and Techniques of Geographic Information Systems", Pearson Education, 2nd Edition, November 2016. ISBN: 9789332581883

**TOTAL:45 PERIODS**

### YouTube Resources:

1. **Esri** – Esri is a leading provider of GIS software and solutions. Their YouTube channel features tutorials, webinars, case studies, and product demonstrations related to ArcGIS, one of the most widely used GIS platforms globally.
2. **GIS Tutorial** - This channel offers tutorials and guides for learning GIS concepts, software usage (especially ArcGIS), and practical applications in various fields such as urban planning, environmental science, and engineering.
3. **GeoSpatial Training** - GeoSpatial Training provides video tutorials and webinars covering a wide range of GIS topics, including software tutorials, data analysis techniques, and industry-specific applications.
4. **QGIS Tutorials and Tips** - QGIS is an open-source GIS software alternative to ArcGIS. This channel offers tutorials, tips, and tricks for using QGIS effectively, covering topics from basic to advanced functionalities.
5. **MapScaping** - MapScaping produces informative videos on GIS, cartography, remote sensing, and geospatial technologies. Their content includes tutorials, interviews with GIS professionals, and discussions on emerging trends in the field.

Course Code	<b>RENEWABLE ENERGY TECHNOLOGIES</b>	L	T	P	C
MEOE3705		3	0	0	3

**COURSE OBJECTIVES:**

- To know the Indian and global energy scenario
- To learn the various solar energy technologies and its applications.
- To educate the various wind energy technologies.
- To explore the various bio-energy technologies.
- To study the ocean and geothermal technologies.

**UNIT I Energy Scenario 9**

Indian energy scenario in various sectors – domestic, industrial, commercial, agriculture, transportation and others – Present conventional energy status – Present renewable energy status. Potential of various renewable energy sources-Global energy status-Per capita energy consumption - Future energy plans.

**UNIT II Solar Energy 9**

Solar radiation – Measurements of solar radiation and sunshine – Solar spectrum - Solar thermal collectors – Flat plate and concentrating collectors – Solar thermal applications – Solar thermal energy storage – Fundamentals of solar photo voltaic conversion – Solar cells – Solar PV Systems – Solar PV applications

**UNIT III Wind Energy 9**

Wind data and energy estimation – Betz limit - Site selection for windfarms – characteristics - Wind resource assessment - Horizontal axis wind turbine – components - Vertical axis wind turbine – Wind turbine generators and its performance – Hybrid systems – Environmental issues – Applications.

**UNIT IV Bio-Energy 9**

Bio resources – Biomass direct combustion – thermochemical conversion - biochemical conversion-mechanical conversion - Biomass gasifier - Types of biomass gasifiers - Cogeneration -- Carbonisation – Pyrolysis - Biogas plants – Digesters -Biodiesel production – Ethanol production – Applications

**UNIT V Ocean and geothermal energy 9**

Small hydro - Tidal energy – Wave energy – Open and closed OTEC Cycles – Limitations – Geothermal energy – Geothermal energy sources - Types of geothermal power plants – Applications - Environmental impact **TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

On successful completion of this course, the student will be able to

- CO1: Discuss the Indian and global energy scenario.
- CO2: Describe the various solar energy technologies and its applications.
- CO3: Explain the various wind energy technologies.
- CO4: Explore the various bio-energy technologies.
- CO5: Discuss the ocean and geothermal technologies.

4. Tiwari G.N., "Solar Energy – Fundamentals Design, Modelling and applications", Alpha Science Intl Ltd, 2015.
5. Twidell, J.W. & Weir A., "Renewable Energy Resources", EFNSpon Ltd., UK, 2015

<b>Course Code</b>	<b>GREEN COMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
CSOE4703		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

1. Understand the fundamentals, significance, and regulations shaping the field of green computing.
2. Implement techniques to enhance energy efficiency in computing systems and embrace sustainable practices.
3. Develop eco-friendly software solutions, incorporating energy-efficient coding practices and sustainable software design.
4. Design and manage data centers with a focus on energy efficiency and environmentally responsible practices.
5. Equip students with knowledge to manage electronic waste responsibly, emphasizing reuse, recycling, and regulatory compliance.

**UNIT I FOUNDATIONS OF GREEN COMPUTING 9**

Introduction to Green Computing, Significance and Global Relevance, Environmental Challenges in Computing, Energy Consumption in Computing, Electronic Waste and Resource Depletion, Green Policies and Regulations, Compliance with Environmental Standards, Case Studies in Sustainable Computing.

**UNIT II OPTIMIZING ENERGY CONSUMPTION 9**

Techniques for Reducing Energy Consumption, Power Management Strategies, Energy-efficient Hardware Design, Sustainable Software Development, Virtualization and Server Consolidation, Energy-aware Algorithms, Renewable Energy Integration, Best Practices in Energy Optimization.

**UNIT III GREEN SOFTWARE PRACTICES 9**

Principles of Green Software, Code Optimization for Energy Efficiency, Sustainable Software Design Patterns, Energy-efficient Algorithms, Software Development Lifecycle and Green Computing, Case Studies in Green Software Development, Hands-on Coding Exercise, Collaboration Between Developers and Environmental Experts

**UNIT IV BUILDING ECO-FRIENDLY DATA CENTERS 9**

Green Data Center Concepts, Cooling and Climate Control Innovations, Server Virtualization and Consolidation, Sustainable Server and Storage Solutions, Energy-efficient Hardware Selection, Monitoring and Optimization Tools, Data Center Certification Standards, Group Workshop: Designing a Green Data Center.

**UNIT V RESPONSIBLE E-WASTE PRACTICES 9**

Understanding Electronic Waste (E-waste), E-waste Collection and Recycling Programs, Reuse and Upcycling of Computing Equipment, Eco-friendly Disposal Practices, Regulatory Compliance in E-waste Management, Community Engagement for E-waste Awareness, Student-led E-waste Collection Drive, Final Project Presentations and Reflections.

**NUMBER OF THEORY PERIODS : 45**

## **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- CO1 Understand environmental impact, regulations, and ethical considerations influencing sustainable computing practices globally.
- CO2 Apply strategies for energy efficiency and renewable energy integration in computing systems effectively.
- CO3 Develop eco-friendly software, employing energy-efficient coding, sustainable design patterns, and lifecycle assessment principles.
- CO4 Design and manage data centers with a focus on energy efficiency, eco-friendly hardware, and certifications.
- CO5 Lead e-waste initiatives, ensuring ethical disposal, regulatory compliance, and community engagement for sustainability.

## **TEXTBOOKS:**

1. "Green IT for Dummies" by Carol Baroudi (2022)
2. "Energy Efficient Servers: Blueprints for Data Center Optimization" by Corey Gough (2021)
3. "Sustainable Software Development: An Agile Perspective" by Kevin Carlson (2023)
4. "Designing Green Data Centers" by Bill Kleyman (2022)
5. "E-Waste in Transition: From Pollution to Resource" by Flor Avelino (2021)

## **REFERENCES:**

1. "Green Computing: Tools and Techniques for Saving Energy, Money, and Resources" by Bud E. Smith (2023)
2. "Energy-Efficient Distributed Computing Systems" by Albert Y. Zomaya (2022)
3. "Sustainable Software Architecture: A Framework for Modern Enterprise Applications" by Carola Lilienthal (2023)
4. "Data Center Handbook" by Hwaiyu Geng (2021)
5. "Electronic Waste Management and Treatment Technology" by Majeti Narasimha Vara Prasad (2022)

### APPENDIX C: MANDATORY COURSES

#### Mandatory Course - I (MC)

S. No.	Course Title	Semester	L	T	P	C
1.	Well Being with Traditional Practices Yoga Ayurveda and Sidda	II	2	0	0	0
2.	Elements of Literature	II	2	0	0	0
3.	Film Appreciation	II	2	0	0	0
4.	Disaster Risk Reduction and Management	II	2	0	0	0
5.	Environmental Sciences and Sustainability	II	2	0	0	0
<b>Total Credits</b>			<b>0</b>			

#### Mandatory Course - II (MC)

S. No.	Course Title	Semester	L	T	P	C
1.	Introduction to Women and Gender Studies	III	2	0	0	0
2.	History of Science and Technology in India	III	2	0	0	0
3.	Political and Economic Thought for a Human Society	III	2	0	0	0
4.	State, Nation Building and Politics in India	III	2	0	0	0
5.	Industrial Safety	III	2	0	0	0
<b>Total Credits</b>			<b>0</b>			

## MANDATORY COURSE I

Course Code	WELL-BEING WITH TRADITIONAL PRACTICES, AYURVEDA AND SIDDHA	L	T	P	C
MC3301		3	0	0	0

### COURSE OBJECTIVES:

1. To enjoy life happily with fun-filled new style activities that help to maintain health also
2. To adapt a few lifestyle changes that will prevent many health disorders
3. To be cool and handbill every emotion very smoothly in every walk of life
4. To learn to eat cost-effective but healthy foods that are rich in essential nutrients
5. To develop immunity naturally that will improve resistance against many health disorders

### UNIT I            HEALTH AND ITS IMPORTANCE 2+4

**Health: Definition - Importance of maintaining health** - More importance on prevention than treatment Ten types of health one has to maintain - Physical health - Mental health - Social health - Financial health - Emotional health - Spiritual health - Intellectual health - Relationship health - Environmental health - Occupational/Professional health.

**Present health status** - The life expectancy-present status - mortality rate - dreadful diseases - Non-communicable diseases (NCDs) the leading cause of death - 60% - heart disease – cancer – diabetes - chronic pulmonary diseases - risk factors – tobacco – alcohol - unhealthy diet - lack of physical activities.

**Types of diseases and disorders** - Lifestyle disorders – Obesity – Diabetes - cardiovascular diseases – Cancer – Strokes – COPD - Arthritis - Mental health issues.

**Causes of the above diseases/disorders - Importance of prevention of illness** - Takes care of health - Improves quality of life - Reduces absenteeism - Increases satisfaction - Saves time.

**Simple lifestyle modifications to maintain health** - Healthy Eating habits (Balanced diet according to age) Physical Activities (Stretching exercise, aerobics, resisting exercise) - Maintaining importance and actions to be taken

### UNIT II            DIET 9

Role of diet in maintaining health - energy one needs to keep active throughout the day - nutrients one needs for growth and repair - helps one to stay strong and healthy - helps to prevent diet-related illness, such as some cancers - keeps active and - helps one to maintain a healthy weight - helps to reduce risk of developing lifestyle disorders like diabetes – arthritis – hypertension – PCOD – infertility – ADHD – sleeplessness -helps to reduce the risk of heart diseases - keeps the teeth and bones strong.

**Balanced Diet and its 7 Components** - Carbohydrates – Proteins – Fats – Vitamins – Minerals -

## COURSE OUTCOMES:

On completion of this course, the students will be able to:

- CO1 Learn the importance of different components of health
- CO2 Gain confidence to lead a healthy life
- CO3 Learn new techniques to prevent lifestyle health disorders
- CO4 Understand the importance of diet and workouts in maintaining health

## TEXTBOOKS:

Course Code	ELEMENTS OF LITERATURE	L	T	P	C
MC3302		3	0	0	0

### COURSE OBJECTIVES:

1. To make the students aware about the finer sensibilities of human existence through an art form. The students will learn to appreciate different forms of literature as suitable modes of expressing human experience.

#### UNIT I INTRODUCTION TO ELEMENTS OF LITERATURE 9

Relevance of literature a) Enhances Reading, thinking, discussing and writing skills. b) Develops finer sensibility for better human relationship. c) Increases understanding of the problem of humanity without bias. d) Providing space to reconcile and get a cathartic effect.

#### UNIT II ELEMENTS OF FICTION 9

- a) Fiction, fact and literary truth.
- b) Fictional modes and patterns.
- c) Plot character and perspective.

#### UNIT III ELEMENTS OF POETRY 9

a) Emotions and imaginations. b) Figurative language. c) (Simile, metaphor, conceit, symbol, pun and irony). d) Personification and animation. e) Rhetoric and trend.

#### UNIT IV ELEMENTS OF DRAMA 9

a) Drama as representational art. b) Content mode and elements. c) Theatrical performance. d) Drama as narration, mediation and persuasion. e) Features of tragedy, comedy and satire.

#### UNIT V OTHER SESSION 9

Tutorials:

Laboratory:

Project: The students will write a term paper to show their understanding of a particular piece of literature

ASSESSMENT:

HA:

Quizzes-HA:

Periodical Examination: one

Project/Lab: one (under the guidance of the teachers the students will take a volume of poetry, fiction or drama and write a term paper to show their understanding of it in a given context; sociological, psychological, historical, autobiographical etc.

Final Exam:

**TOTAL NUMBER OF PERIODS:**

**45**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

CO1 Students will be able to understand the relevance of literature in human life and appreciate its aspects in developing finer sensibilities.

**READINGS**

1. An Introduction to the Study of English Literature, W.H. Hudson, Atlantic, 2007.
2. An Introduction to Literary Studies, Mario Klarer, Routledge, 2013.
3. The Experience of Poetry, Graham Mode, Open college of Arts with Open Univ Press, 1991.
4. The Elements of Fiction: A Survey, Ulf Wolf (ed), Wolfstuff, 2114.
5. The Elements of Drama, J.L. Styan, Literary Licensing, 2011.

**REFERENCES:**

1. To be decided by the teacher and student, on the basis of individual student so as to enable him or her to write the term paper.

Course Code	DISASTER RISK REDUCTION AND MANAGEMENT	L	T	P	C
MC3304		3	0	0	0

**COURSE OBJECTIVES:**

1. To impart knowledge on concepts related to disaster, disaster risk reduction, disaster management
2. To acquaint with the skills for planning and organizing disaster response.

**UNIT I HAZARDS, VULNERABILITY AND DISASTER RISKS 9**

Definition: Disaster, Hazard, Vulnerability, Resilience, Risks – Types of Disasters: Natural, Human induced, Climate change induced –Earthquake, Landslide, Flood, Drought, Fire etc – Technological disasters- Structural collapse, Industrial accidents, oil spills -Causes, Impacts including social, Economic, political, environmental, health, psychosocial, etc.- Disaster vulnerability profile of India and Tamil Nadu - Global trends in disasters: urban disasters, pandemics, Complex emergencies, - Inter relations between Disasters and Sustainable development Goals

**UNIT II DISASTER RISK REDUCTION (DRR) 9**

Sendai Framework for Disaster Risk Reduction, Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community Based DRR, Structural- non-structural measures, Roles and responsibilities of- community, Panchayati Raj Institutions / Urban Local Bodies (PRIs/ULBs), States, Centre, and other stakeholders- Early Warning System – Advisories from Appropriate Agencies. - Relevance of indigenous Knowledge, appropriate technology and Local resources.

**UNIT III DISASTER MANAGEMENT 9**

Components of Disaster Management – Preparedness of rescue and relief, mitigation, rehabilitation and reconstruction- Disaster Risk Management and post disaster management – Compensation and Insurance- Disaster Management Act (2005) and Policy - Other related policies, plans, programmers and legislation - Institutional Processes and Framework at State and Central Level- (NDMA –SDMA-DDMA-NRDF- Civic Volunteers)

**UNIT IV TOOLS AND TECHNOLOGY FOR DISASTER MANAGEMENT 9**

Early warning systems -Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and Preparedness, – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment. - Elements of Climate Resilient Development –Standard operation Procedure for disaster response – Financial planning for disaster Management

**UNIT V DISASTER MANAGEMENT: CASE STUDIES 9**

Discussion on selected case studies to analyse the potential impacts and actions in the contest of

disasters-Landslide Hazard Zonation: Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field works related to disaster management.- Field work-Mock drill -

**TOTAL NUMBER OF PERIODS:**

**45**

**COURSE OUTCOME:**

On completion of this course, the students will be able to:

- CO1: To impart knowledge on the concepts of Disaster, Vulnerability and Disaster Risk reduction (DRR)
- CO2: To enhance understanding on Hazards, Vulnerability and Disaster Risk Assessment prevention and risk reduction
- CO3: To develop disaster response skills by adopting relevant tools and technology
- CO4: Enhance awareness of institutional processes for Disaster response in the country and
- CO5: Develop rudimentary ability to respond to their surroundings with potential Disaster response in areas where they live, with due sensitivity

**TEXT BOOKS**

2. Government of India, National Disaster Management Policy, 2009.
3. Shaw R (2016), Community based Disaster risk reduction, Oxford University Press

Course Code	ENVIRONMENTAL SCIENCES AND SUSTAINABILITY	L	T	P	C
MC3305		3	0	0	0

### COURSE OBJECTIVES:

1. To introduce the basic concepts of environment, ecosystems and biodiversity and emphasize on the biodiversity of India and its conservation.
2. To impart knowledge on the causes, effects and control or prevention measures of environmental pollution and natural disasters.
3. To facilitate the understanding of global and Indian scenario of renewable and non-renewable resources, causes of their degradation and measures to preserve them.
4. To familiarize the concept of sustainable development goals and appreciate the interdependence of economic and social aspects of sustainability, recognize and analyse climate changes, concept of carbon credit and the challenges of environmental management.
5. To inculcate and embrace sustainability practices and develop a broader understanding on green materials, energy cycles and analyze the role of sustainable urbanization.

### UNIT I ENVIRONMENT AND BIODIVERSITY 6

Definition, scope and importance of environment – need for public awareness. Eco-system and Energy flow– ecological succession. Types of biodiversity: genetic, species and ecosystem diversity– values of biodiversity, India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ.

### UNIT II ENVIRONMENTAL POLLUTION 6

Causes, Effects and Preventive measures of Water, Soil, Air and Noise Pollutions. Solid, Hazardous and E-Waste management. Case studies on Occupational Health and Safety Management system (OHASMS). Environmental protection, Environmental protection acts .

### UNIT III RENEWABLE SOURCES OF ENERGY 6

Energy management and energy conservation, New Energy Sources: Need of new energy sources. Different types of new energy sources. Applications of–Hydrogen energy resources, Tidal energy conversion. Concept, origin and power plants of geothermal energy.

### UNIT IV SUSTAINABILITY AND MANAGEMENT 6

Development, GDP, Sustainability- concept, needs and challenges-economic, social and aspects of sustainability-from unsustainability to sustainability-millennium development goals, and protocols-Sustainable Development Goals-targets, indicators and intervention areas Climate change- Global, Regional and local environmental issues and possible solutions-case studies. Concept of Carbon Credit, Carbon Footprint. Environmental management in industry-A case study.

### UNIT V SUSTAINABILITY PRACTICES 6

Zero waste and R concept, Circular economy, ISO 14000 Series, Material Life cycle assessment, Environmental Impact Assessment. Sustainable habitat: Green buildings, Green materials, Energy

efficiency, Sustainable transports. Sustainable energy: Non-conventional Sources, Energy Cycles-carbon cycle, emission and sequestration, Green Engineering: Sustainable urbanization- Socio-economical and technological change.

**TOTAL NUMBER OF PERIODS:**

**30**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- CO1 To recognize and understand the functions of environment, ecosystems and biodiversity and their conservation.
- CO2 To identify the causes, effects of environmental pollution and natural disasters and contribute to the preventive measures in the society.
- CO3 To identify and apply the understanding of renewable and non-renewable resources and contribute to the sustainable measures to preserve them for future generations.
- CO4 To recognize the different goals of sustainable development and apply them for suitable technological advancement and societal development.
- CO5 To demonstrate the knowledge of sustainability practices and identify green materials, energy cycles and the role of sustainable urbanization.

<b>Course Code</b>	<b>HISTORY OF SCIENCE AND TECHNOLOGY IN INDIA</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>MC3402</b>		3	0	0	0

**UNIT I CONCEPTS AND PERSPECTIVES 9**

Meaning of History Objectivity, Determinism, Relativism, Causation, Generalization in History; Moral judgment in history Extent of subjectivity, contrast with physical sciences, interpretation and speculation, causation verses evidence, the concept of historical inevitability, and Historical Positivism. Science and Technology-Meaning, Scope and Importance, Interaction of science, technology & society, Sources of history on science and technology in India

**UNIT II HISTORIOGRAPHY OF SCIENCE AND TECHNOLOGY IN INDI 9**

Introduction to the works of D.D. Kosambi, Dharmapal, Debiprasad Chattopadhyay, Rehman, S. Irfan Habib, Deepak Kumar, Dhruv Raina, and others.

**UNIT III SCIENCE AND TECHNOLOGY IN ANCIENT INDIA 9**

Technology in pre-historic period Beginning of agriculture and its impact on technology Science and Technology during Vedic and Later Vedic times Science and technology from 1st century AD to C-1200

**UNIT IV SCIENCE AND TECHNOLOGY IN MEDIEVAL INDIA 9**

Science and the Empire Indian response to Western Science Growth of techno-scientific institutions

**UNIT V SCIENCE AND TECHNOLOGY IN A POST-INDEPENDENT INDIA 9**

Science, Technology and Development discourse Shaping of the Science and Technology Policy Developments in the field of Science and Technology Science and technology in globalizing India Social implications of new technologies like the Information Technology and Biotechnology.

**TOTAL NUMBER OF PERIODS:45**

<b>Course Code</b>	<b>POLITICAL AND ECONOMIC THOUGHT FOR A HUMANE SOCIETY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>MC3403</b>		3	0	0	0

**COURSE OBJECTIVES:**

1. This course will begin with a short overview of human needs and desires and how different political-economic systems try to fulfil them. In the process, we will end with a critique of different systems and their implementations in the past, with possible future directions.

**UNIT I INTRODUCTION 9**

Considerations for humane society, holistic thought, human being's desires, harmony in self, harmony in relationships, society, and nature, societal systems. (Refs: A Nagaraj, M K Gandhi, JC Kumarappa)

**UNIT II CAPITALISM AND MONOPOLIES 7**

Capitalism – Free markets, demand-supply, perfect competition, laissez-faire, monopolies, imperialism. Liberal democracy. (Refs: Adam smith, J S Mill) Fascism and totalitarianism. World War I and II. Cold war.

**UNIT III COMMUNISM 5**

Communism – Mode of production, theory of labour, surplus value, class struggle, dialectical materialism, historical materialism, Russian and Chinese models. (Refs: Marx, Lenin, Mao, M N Roy)

**UNIT IV HUMAN EMPOWERMENT 9**

Welfare state. Relation with human desires. Empowered human beings, satisfaction. Gandhian thought. Swaraj, Decentralized economy & polity, Community. Control over one's lives. Relationship with nature. (Refs: M K Gandhi, Schumacher, Kumarappa)

**UNIT V EDUCATION AND TECHNOLOGY 6**

Essential elements of Indian civilization. (Refs: Pt Sundarlal, R C Mazumdar, Dharampal) Technology as a driver of society, Role of education in shaping of society. Future directions. (4 lectures) (Refs: Nandkishore Acharya, David Dixon, Levis Mumford)

**TOTAL NUMBER OF PERIODS:39**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- CO1 The students will get an understanding of how societies are shaped by philosophy, political and economic system, how they relate to fulfilling human goals & desires with some case studies of how different attempts have been made in the past and how they have fared.

**REFERENCES:**

1. Authors mentioned along with topics above. Detailed reading list will be provided

<b>Course Code</b>	<b>STATE, NATION BUILDING AND POLITICS IN INDIA</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>MC3404</b>		3	0	0	0

**COURSE OBJECTIVES:**

1. The objective of the course is to provide an understanding of the state, how it works through its main organs, primacy of politics and political process, the concept of sovereignty and its changing contours in a globalized world. In the light of this, an attempt will be made to acquaint the students with the main development and legacies of national movement and constitutional development in India, reasons for adopting a Parliamentary-federal system, the broad philosophy of the Constitution of India and the changing nature of Indian Political System. Challenges/ problems and issues concerning national integration and nation-building will also be discussed in the contemporary context with the aim of developing a future vision for a better India.

Understanding the need and role of State and politics. Development of Nation-State, sovereignty, sovereignty in a globalized world. Organs of State – Executive, Legislature, Judiciary. Separation of powers, forms of government unitary-federal, Presidential-Parliamentary, The idea of India. 1857 and the national awakening.

1885 Indian National Congress and development of national movement – its legacies. Constitution making and the Constitution of India. Goals, objective and philosophy. Why a federal system? National integration and nation-building.

Challenges of nation-building – State against democracy (Kothari) New social movements. The changing nature of Indian Political System, the future scenario. What can we do?

**TOTAL NUMBER OF PERIODS:45**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- CO1 It is expected that this course will make students aware of the theoretical aspect of the state, its organs, its operationalization aspect, the background and philosophy behind the founding of the present political system, broad streams and challenges of national integration and nation-building in India. It will equip the students with the real understanding of our political system/ process in correct perspective and make them sit up and think for devising ways for better participation in the system with a view to making the governance and delivery system better for the common man who is often left unheard and unattended in our democratic setup besides generating a lot of dissatisfaction and difficulties for the system.

<b>Course Code</b>	<b>INDUSTRIAL SAFETY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>MC3405</b>		3	0	0	0

**COURSE OBJECTIVES:**

- To Understand the Introduction and basic Terminologies safety.
- To enable the students to learn about the Important Statutory Regulations and standards.
- To enable students to Conduct and participate the various Safety activities in the Industry.
- To have knowledge about Workplace Exposures and Hazards.
- To assess the various Hazards and consequences through various Risk Assessment Techniques.

**UNIT I SAFETY TERMINOLOGIES 9**

Hazard-Types of Hazard- Risk-Hierarchy of Hazards Control Measures-Lead indicators- lag Indicators-Flammability- Toxicity Time-weighted Average (TWA) - Threshold LimitValue (TLV) - Short Term Exposure Limit (STEL)- Immediately dangerous to life or health (IDLH)- acute and chronic Effects- Routes of Chemical Entry-Personnel Protective Equipment- Health and Safety Policy-Material Safety Data Sheet MSDS

**UNIT II STANDARDS AND REGULATIONS 9**

Indian Factories Act-1948- Health- Safety- Hazardous materials and Welfare- ISO 45001:2018 occupational health and safety (OH&S) - Occupational Safety and Health Audit IS14489:1998-Hazard Identification and Risk Analysis- code of practice IS 15656:2006

**UNIT III SAFETY ACTIVITIES 9**

Toolbox Talk- Role of safety Committee- Responsibilities of Safety Officers and Safety Representatives- Safety Training and Safety Incentives- Mock Drills- On-site Emergency Action Plan- Off-site Emergency Action Plan- Safety poster and Display- Human Error Assessment

**UNIT IV WORKPLACE HEALTH AND SAFETY 9**

Noise hazard- Particulate matter- musculoskeletal disorder improper sitting poster and lifting Ergonomics RULE & REBA- Unsafe act & Unsafe Condition- Electrical Hazards- Crane SafetyToxic gas Release.

**UNIT V HAZARD IDENTIFICATION TECHNIQUES 9**

Job Safety Analysis-Preliminary Hazard Analysis-Failure mode and Effects Analysis- Hazard and Operability- Fault Tree Analysis- Event Tree Analysis Qualitative and Quantitative Risk AssessmentChecklist Analysis- Root cause analysis- What-If Analysis- and Hazard Identification and Risk Assessment

**TOTAL NUMBER OF PERIODS:45**

### **COURSE OUTCOMES:**

On completion of this course, the students will be able to:
