

**Curriculum for UG Degree Course in**

**ADVANCED COMMUNICATION TECHNOLOGY**

**Regulation 2022(Revised)**

## Section 1: General Course Structure

### A. Definition of Credit:

1 Hour Lecture (L) per week	1 Credit
1 Hour Tutorial (T) per week	1 Credit
1 Hour Practical (P) per week	0.5 Credit

### B. Structure of Program

S. No.	Category	Credits
1	Humanities & Social Science Courses (HSMC)	12
2	Basic Science Courses (BSC)	20
3	Engineering Science Courses (ESC)	16
4	Program Core Courses (PCC)	77
5	Professional Elective Courses (PEC)	18
6	Open Elective Courses (OEC)	6
7	Employability Enhancement Skills (EES)	20
8	Mandatory Course (MC)	0
	<b>TOTAL</b>	<b>169</b>

### C. Course code and definition

Code	Definition
L	Lecture
T	Tutorial
P	Practical
C	Credits
<Advanced Communication Technology>	Professional core courses
<Advanced Communication Technology>PE	Professional Elective courses
<Advanced Communication Technology>OEC	Open Elective Courses

Technology>OE	
<Advanced Communication Technology>MC	Mandatory Courses

- **Course level coding scheme:** Four-digit number used as suffix with the Course Code for identifying the level of the course. Thousand's place denotes regulation number (we use "3" for 2022-23 Regulation)  
Digit at hundred's place signifies the semester in which course is offered. Last two digits represent the serial order of course within the semester. For example, 3101, 3102, ... are courses offered during first semester.

#### D. Category-wise Courses

##### Humanities & Social Science Courses (HSMC)

S. No.	Course Title	Semester	L-T-P-C
1	தமிழர் மரபு / Heritage of Tamils	I	1-0-0-1
2	Communicative English - I	I	3-0-2-4
3	Communicative English - II	II	2-0-2-3
4	தமிழரும் தொழில் நுட்பமும் / Tamils and Technology	II	1-0-0-1
5	Business Management	VII	3-0-0-3
<b>Total Credits</b>			<b>12</b>

##### Basic Science Courses (BSC)

S. No.	Course Title	Semester	L-T-P-C
1	Matrices and Calculus	I	3-1-0-4
2	Engineering Physics	I	3-0-2-4
3	Engineering Chemistry	I	3-0-2-4
4	Statistics and Numerical Methods	II	3-1-0-4
5	Random Process and Linear Algebra	II	3-1-0-4
<b>Total Credits</b>			<b>20</b>

##### Engineering Science Courses (ESC)

S. No.	Course Title	Semester	L-T-P-C
1	Problem Solving using C	I	3-0-2-4
2	Data Structures and Algorithm using C	II	3-0-2-4

3	Object Oriented Programming in JAVA	III	3-0-2-4
4	Fundamentals of Data science	IV	3-0-2-4
<b>Total Credits</b>			<b>16</b>

### Program Core Courses (PCC)

S. No.	Course Title	Semester	L-T-P-C
1	Electronic Devices and Circuits	I	3-0-2-4
2	Electronic Circuits	II	3-0-2-4
3	Circuit Theory	II	3-0-2-4
4	Digital System Design	II	3-0-2-4
5	Signal Processing for Communication Engineers	III	3-0-2-4
6	Microprocessors and Microcontrollers	III	3-0-2-4
7	Analog Integrated Circuits	III	3-0-2-4
8	Analog Communication systems	III	3-0-2-4
9	Electromagnetic Fields	IV	3-0-0-3
10	Digital Communication Systems	IV	3-0-2-4
11	Embedded Systems	IV	3-0-2-4
12	VLSI Design	IV	3-0-2-4
13	Information coding Techniques	IV	3-0-0-3
14	Transmission lines and Antennas	V	3-0-0-3
15	Control system	V	3-0-0-3
16	Signal Detection and Estimation Techniques	V	3-0-2-4
17	Communication Networks and Security	VI	3-0-2-4
18	Radar and Navigation Techniques	VI	3-0-0-3
19	RF & Microwave Engineering	VI	3-0-2-4
20	Wireless Communication	VI	3-0-2-4
21	Software Defined Radio	VII	3-0-0-3
<b>Total Credits</b>			<b>78</b>

### Professional Elective courses

S. No.	Course Title	Semester	L-T-P-C
1	Professional Elective – I	V	3-0-2-3
2	Professional Elective – II	V	3-0-2-3
3	Professional Elective – III	V	3-0-2-3
4	Professional Elective – IV	VI	3-0-2-3
5	Professional Elective – V	VI	3-0-2-3
6	Professional Elective – VI	VII	3-0-2-3
<b>Total Credits</b>			<b>18</b>

### Open Elective Courses (OEC)

S. No.	Course Title	Semester	L-T-P-C
1	Open Elective – I	VII	3-0-0-3
2	Open Elective – II	VII	3-0-0-3
<b>Total Credits</b>			<b>6</b>

### Mandatory Course (MC)

S. No.	Course Title	Semester	L-T-P-C
1	Mandatory Courses-I	III	1-0-0-0
2	Mandatory Courses-II	IV	1-0-0-0
<b>Total Credits</b>			<b>0</b>

### Employability Enhancement Skills (EES)

S. No.	Course Title	Semester	L-T-P-C
1	Employability Enhancement Skills – I	I	0-0-2-1
2	Employability Enhancement Skills – II	II	0-0-2-1
3	Employability Enhancement Skills – III	III	0-0-2-1
4	Employability Enhancement Skills – IV	IV	0-0-2-1
5	Employability Enhancement Skills – V	IV	0-0-2-1
6	Employability Enhancement Skills –VI	IV	0-0-2-1
7	Core Course Project	III	0-0-2-1
8	Core Course Project	IV	0-0-2-1
9	Core Course Project	V	0-0-2-1
10	Core Course Project	VI	0-0-2-1
11	Internship	VII	0-0-4-2
12	Project work	VIII	0-0-24-8
<b>Total Credits</b>			<b>20</b>

## **E. Induction Program**

- ***Catapult*** is a dynamic week-long event designed for our incoming first-year students, offering an immersive introduction to the diverse array of clubs and activities across the college campus. In addition to familiarizing them with our labs and Centers of Excellence (COEs), Catapult aims to acclimate first-year students to college life, ensuring they feel at ease with the forthcoming experiences of their four-year journey.
- This initiative fosters meaningful connections between seniors and juniors, providing a platform for them to explore departmental projects and engage in collaborative activities, thereby enhancing camaraderie and knowledge sharing within the college community.

## **F. Evaluation Scheme**

### **a. For Theory Courses:**

The weightage of Internal assessment is 40% and for End Semester Exam is 60%  
The student has to obtain at least 50% marks individually both in internal assessment and end semester exams to pass

### **b. For Practical Courses:**

The weightage of Internal assessment is 60% and for End Semester Exam is 40%  
For Theory cum Lab  
The student has to obtain at least 50% marks individually both in internal assessment and end semester exams to pass.

### **c. For Theory Cum Practical Courses:**

The weightage of Internal assessment is 50% and for End Semester Exam is 50%  
The student has to obtain at least 50% marks individually both in internal assessment and end semester exams to pass

**Note:** The internal assessment is based on the student's performance in 3 Internal Assessment (IA) exams, quizzes, assignments, class performance, attendance, etc.

### **d. For Project works:**

Assessment of project works comprises three internal reviews and an end-of-semester evaluation. Internal reviews, worth 40 marks in total, encompass assessment criteria such as Project Synopsis/Proposal Evaluation, Methodology and Design of Existing System, Feasibility of Project Proposal, Planning of Project Work, and Team Work. At the conclusion of the semester, 20 marks are designated for assessing the quality of the report, while the remaining 40 marks are reserved for evaluating performance in viva-voce, demonstration of the work, and other relevant factors.

## **G. Learning Beyond Class Room**

- a. Students should be encouraged to visit Centers of Excellence (COEs) in the campus and learn additional technical skills
- b. Students should be encouraged to participate in internal / external competitions, hackathons, etc. on a regular basis

**Section 2: Semester wise Structure and Curriculum for UG Course in <ADVANCED COMMUNICATION TECHNOLOGY>**

Applications: Stream line in fluid Dynamic – Heat transforms. analytic functions, Cauchy's integral theorem and integral formula, Taylor's and Laurent's series, residue theorem.

**TOTAL: 60 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:** After the completion of the course, students will be able to

- C01: Recalling matrix algebra successful methods for solving the practical problems.
- C02: Apply various techniques in solving ordinary differential equations.
- C03: Apply the differential calculus ideas to several functions.
- C04: Apply the multiple integral ideas in solving areas, volumes and other practical problems.
- C05: Understand the Gradient, divergence and curl of a vector point function and related identities.

Course Code	<b>Communicative English – I</b>	L	T	P	C
HS3101		3	0	2	4

**COURSE OBJECTIVES:**

- To improve the communication competency.
- To learn basic grammatical structures in suitable contexts.
- To build students' English language skills through LSRW.

- To enable the students to write in English precisely and effectively
- To develop language proficiency in expressing their opinions.

### **Introduction to Effective Communication**

What is effective communication? Why is communication critical for excellence during study, research, and work? What are the seven C's of effective communication?

### **UNIT I Integrals of Communication (Greetings & Introduction) 8**

Listening – Listening comprehensions, listening to News

Speaking – Just A Minute, Introducing a friend

Reading – Reading Newspaper / Articles/ Magazines, Reading comprehension

Vocabulary – Synonyms & Antonyms, Acquaintance with Prefixes & suffixes from foreign languages in English to form derivatives and Word formation

Grammar – Parts of Speech, Mixed Tenses, Active & Passive Voice

Writing – Letter of Introduction, Developing the Hints

### **UNIT II Giving and Receiving Instructions 9**

Listening – Listening to short stories, Narrations and Persuasive speech

Speaking – Giving Instructions to use the Product/ Presenting or summarizing about a product

Reading – Reading Advertisements / Biographies

Vocabulary – Abbreviation, Acronyms, One – word Substitutes

Grammar – WH Questions/Yes or No Questions, Imperatives

Writing – Instructions, Paragraph Writing

### **UNIT III Describing People and Places 9**

Listening – Listening to the description of a product

Speaking – Picture Description, Narrating personal experiences and events

Reading – Gadget Reviews, User Manuals

Vocabulary – Homonyms, Homophones, Compound Words

Grammar – Adjectives, Adverbs, Articles.

Writing – Recommendations, Product/ Process Description.

### **UNIT IV Visualization and Classification 9**

Listening – TED talks

Speaking – Interviewing a celebrity/Famous Personality

Reading – Company profiles, Business Letters

Vocabulary – Discourse Markers, Linking words and Phrases Collocation.

Grammar – Pronouns, Conjunction, Preposition

Writing – Interpretation of Charts and Graphs

### **UNIT V Exposition 9**

Listening – Watching Movies / Listening to Dialogues and Conversations

Speaking – Role play, Panel Discussion, Debate

Reading – Blogs, Novels, Short Stories

Vocabulary – Phrasal Verbs

Grammar – Simple/Compound/Complex Sentences, Error Spotting, Punctuation.

Writing – Descriptive Essay, Dialogue Writing

**LIST OF EXERCISES:**

1. Extempore (Oral)
2. Conversation on asking directions
3. Picture Description, about purchasing a product.
4. Summarising a TED talk.
5. Role play.

**TOTAL (THEORY AND PRACTICAL): 75 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:** After the completion of the course, students will be able to

- C01: Use appropriate words in a professional context
- C02: Gain an understanding of basic grammatical structures and use them in the right context.
- C03: Write definitions, descriptions, narrations and essays on various topics
- C04: Speak fluently and accurately in formal and informal communicative contexts
- C05: Express their opinions effectively in both oral and written medium of communication.

**TEXT BOOKS**

1. English for Engineers & Technologists Orient Blackswan Private Ltd. Department of English, Anna University, (2020 edition)
2. English for Science & Technology Cambridge University Press, 2021. Authored by Dr. Veena Selvam, Dr. Sujatha Priyadarshini, Dr. Deepa Mary Francis, Dr. KN. Shoba, and Dr. Lourdes Joevani, Department of English, Anna University.
3. Professional English-II, V.K. Publications, Dr.S.N. Mahalakshmi.

**REFERENCES**

1. Technical Communication – Principles and Practices By Meenakshi Raman & Sangeeta Sharma, Oxford Univ. Press, 2016, New Delhi.
2. A Course Book On Technical English By Lakshminarayanan, Scitech Publications (India) Pvt.
3. Learning to Communicate–Dr.V. Chellammal. Allied Publishers, New Delhi,2003

Course Code	<b>Engineering Physics</b>			
PH3101	L	T	P	C
	3	0	2	4

**COURSE OBJECTIVES:**

- To make the students effectively understand the basics of mechanics and properties of matter.

- To provide an overview of sound and ultrasonic production, detection and applications.
- To introduce the basics of lasers.
- To enrich the basic knowledge of optical fiber
- To understand quantum mechanical phenomena and apply in computing fields.

**UNIT I Mechanics and Properties of Matter 9**

Center of mass (CM) – motion of the CM – kinetic energy of the system of particles – moment of inertia – theorems of M. I – moment of inertia of continuous bodies (Ring, Disc) – conservation of angular momentum – gyroscope. Elasticity – Hooke’s law – stress –strain diagram – Factors affecting elasticity – bending of Beams – Young’s modulus by uniform bending and non – uniform bending – Torsional Pendulum – I – shaped girders.

**UNIT II Acoustics and Ultrasonics 9**

Acoustics: Classification and characteristics of sound – decibel – Weber – Fechner law – Factors affecting acoustics of buildings and their remedies – Methods of determination of Absorption Coefficient. -Doppler effect. Ultrasonic – Production of Ultrasonics by Magnetostriction and piezoelectric methods – Acoustic grating – Non Destructive Testing – pulse echo system through transmission and reflection modes – A, B and C – scan displays.

**UNIT III Laser 9**

Laser: Characteristics – Spontaneous and stimulated emission – Pumping methods – Optical Resonator – Active medium and Active centre – Einstein’s coefficient – population inversion – Types of laser – Nd – YAG laser, CO<sub>2</sub> laser, Semiconductor lasers: homojunction and heterojunction Industrial and medical application

**UNIT IV Fibre Optics 9**

Fiber optics – Principle, Numerical aperture and acceptance angle – types of optical fibers (material, refractive index, mode) – attenuation, dispersion – Fibre Optical Communication system (Block diagram) – Displacement sensors- Temperature/Pressure sensors – Wavelength division multiplexing – Optical fibers in computers.

**UNIT V Quantum Mechanics 9**

Planck’s quantum theory – Compton effect – Particle properties of wave: Matter waves, wave function – The Schrodinger equation (Time dependent and time independent forms) – Particle in an infinite potential well: 1D,2D and 3D Boxes – Scanning Tunneling microscope.

**PRACTICAL EXERCISES (FIVE ONLY)**

1. Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids.
2. Simple harmonic oscillations of cantilever.
3. Uniform bending – Determination of Young’s modulus.
4. Laser – Determination of the wavelength of the laser using grating.
5. Optical fibre – Determination of Numerical Aperture and acceptance angle.
6. Acoustic grating – Determination of velocity of ultrasonic waves in liquids.
7. Michelson Interferometer.

**TOTAL (THEORY AND PRACTICAL): 75 PERIODS**

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

After the completion of the course, students will be able to

- CO1: Understand the importance of mechanics and express their knowledge in properties of matter
- CO2: Analyze the applications of acoustics and ultrasonic in the engineering field.
- CO3: Acquire knowledge in laser and its applications
- CO4: Demonstrate a strong foundational knowledge in fiber optics
- CO5: Comprehend and apply quantum mechanical principles.

Course Code	<b>Engineering Chemistry</b>	L	T	P	C
CY3101		3	0	2	4

### COURSE OBJECTIVE:

- To inculcate sound understanding of water quality and water treatment techniques.
- To impart knowledge on the preparatory methods of nanomaterials. To introduce the properties and applications of composites

- To facilitate the understanding of fuel classification, preparation, combustion, and environmental impact.
- To conversant with the principle electrochemistry, cell reactions, and corrosion protection techniques.
- To acquire a deep understanding of renewable energy sources along with energy storage technologies and innovation in sustainable energy systems.

## **UNIT I Water and Its Treatment 9**

**Water:** Sources and impurities, hardness, alkalinity. Treatments – sterilization – break point chlorination, UV, Ozonation, Desalination of brackish water: Reverse Osmosis. Boiler troubles: Scale and sludge, Boiler corrosion, Caustic embrittlement, Priming & foaming. Treatment of boiler feed water: Internal treatment (phosphate, colloidal, sodium aluminate and calgon conditioning) and External treatment Ion exchange demineralization and zeolite process.

## **UNIT II Nano Materials & Composite 9**

**Basics:** Distinction between molecules, nanomaterials and bulk materials; Types of nanomaterials: Definition, properties and uses of nanoparticles and nanotubes. Preparation of nanomaterials: laser ablation, and electrospinning. An application of nano materials in medicine, agriculture, energy, electronics and catalysis.

**Composite:** Properties and applications of: Metal matrix composites (MMC), Ceramic matrix composites and Polymer matrix composites. FRP – Hybrid composites – definition and examples.

## **UNIT III Fuels and Combustion 9**

**Fuels:** Introduction: Classification of fuels; Coal and coke: Analysis of coal (proximate and ultimate), Carbonization, Manufacture of metallurgical coke (Otto Hoffmann method). Petroleum and Diesel: Manufacture of synthetic petrol (Bergius process), Knocking – octane number, diesel oil – cetane number; Power alcohol and biodiesel.

**Combustion of fuels:** Introduction: Calorific value – higher and lower calorific values, Theoretical calculation of calorific value; Flue gas analysis – ORSAT Method. CO<sub>2</sub> emission and carbon footprint.

## **UNIT IV ElectroChemistry and Corrosion Control 9**

**Electrochemistry** – Introduction, Electrochemical cells – electrolytic cell – reversible and irreversible cells. Electrode potential – Oxidation and reduction Potentials – emf, Nernst equation and applications. Reference electrodes – Calomel electrode – Electrochemical series – its applications.

**Corrosion protection** – cathodic protection – sacrificial anodic and impressed current protection methods; advanced protective coatings: electroplating and electroless plating.

## **UNIT V Energy Sources and Storage Devices 9**

**Solar energy conversion:** Principle, working and applications of solar cells; recent developments in solar cell materials. Wind energy; Geothermal energy. Hydrogen as fuel: Sources of hydrogen – Hydrogen production methods – electrolysis, limitations and applications.

**Storage Devices:** Batteries – Types of batteries, Primary battery – dry cell, Secondary battery – lead acid battery and lithium – ion – battery; Electric vehicles – working principles; Fuel cells: H<sub>2</sub> – O<sub>2</sub> fuel cell.

### LIST OF EXPERIMENTS

1. Determination of total, temporary and permanent hardness of water by EDTA method.
2. Determination of alkalinity in water sample.
3. pH – metry determination strength of HCl by NaOH.
4. Determination of BaCl<sub>2</sub> by conductometric precipitation titration.
5. Estimation of iron content of the given solution by using potentiometer.

**TOTAL (THEORY AND PRACTICAL): 75 PERIODS**

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

After the completion of the course, students will be able to

C01: To infer the quality of water and propose suitable treatment methodologies for hard water.

C02: To identify and apply basic concepts of nanomaterial's preparation for engineering applications.

C03: To gain knowledge of fuel properties, manufacturing processes, combustion characteristics, and environmental considerations.

C04: To attain expertise in electrochemical principles, cell reactions and corrosion protection techniques.

C05: To attain proficiency in different forms of energy resources and fuel cell utilization, fostering the lead advancements in renewable energy and energy storage solutions.

Course Code	<b>Problem Solving Using C Programming</b>	L	T	P	C
CS3103		3	0	2	4

### COURSE OBJECTIVES:

- To understand the basic programming constructs of C Language
- To develop C programming using arrays and strings
- To develop modular applications in C using functions and pointers
- To develop applications in C using structs and unions
- To do input/output and file handling in C

### UNIT I 15 **Basics of C Programming**

Introduction to programming paradigms – Structure of C program – Creating C programs – Variables, Keywords, Data types, Constants, Operators, input / output statements – Decision making statements – Looping with while, do-while, and for loops – Nested loops and loop control statements

#### Coding Exercises

1. Write a C program to find the sum of two integers entered by the user
2. Write a C program to check if a given number is even or odd
3. Write a C program to find the largest among three numbers using if-else statements

#### Problems-solving Assignments

1. Write a C program to calculate the factorial of a given positive integer using a loop
2. Write a C program to check if a given number is a prime number
3. Write a C program to find the GCD of two numbers using a function

### UNIT II 15 **Arrays and Strings**

Working with arrays: One dimensional array: declaration, initialization, and accessing elements – Two dimensional arrays: Declaration -Initialization – Accessing elements – Operations: Read – Print – Sum – Transpose, Strings in C: string functions and manipulation – linear and binary Search, Selection sort

#### Coding Exercises

1. Implement a program that finds the largest element in an array of integers
2. Write a C program to count the number of vowels and consonants in a given string
3. Write a program to reverse a string without using the standard string library functions

#### Problems-solving Assignments

1. Write a C program to merge two sorted arrays into a single sorted array
2. Write a C program to find the second largest element in an array
3. Write a program that finds the intersection of two arrays and stores the result in a third array

### UNIT III 15 **Functions and Pointers**

Modular programming – Function prototype, function definition, function call, Built-in functions (string functions, math functions) – Recursion– Parameter passing: Pass by value, Pass by

reference- Introduction to pointers and memory management – Pointer operators – Pointer arithmetic - Pointers and arrays

### **Coding Exercises**

1. Write a C program to exchange the values of variables
2. Implement a recursive function to calculate the factorial of a given number

### **Problems-solving Assignments**

1. Write a C program to sort an array of strings in alphabetical order using function
2. Create a program to implement a binary search algorithm to search for an element in a sorted array using recursion

## **UNIT IV Structure and Union**

**15**

Structure – Nested structures – Pointer and Structures – Array of structures – Self-referential structures – Dynamic memory allocation – Singly linked list – Typedef – Union – Storage classes and Visibility

### **Coding Exercises**

1. Write a C program to find the average and total marks of students using a structure

### **Problems-solving Assignments**

1. Write a C program to create a structure representing a book with title, author, and publication year. Implement functions to add, display, and search for books in a library
2. Implement a program to manage a student database using structs, including functions to add, delete, and display student records

## **UNIT V File Processing**

**15**

Files – Types of file processing: Sequential access, Random access – Sequential access file – Random access file – Command line arguments – Code optimization and best practices

### **Coding Exercises:**

1. Create a program that reads data from a file and calculates the average of a set of numbers
2. Write a program to copy the contents of one file into another file

### **Problems-solving Assignments:**

1. Write a C program to read student records from a file and calculate their total and percentage
2. Develop a program to read employee details from a file, sort them based on salary, and write the sorted data back to the file

**Final Project** (sample): Design a simple inventory management system for a small store using structs and file handling. The program should allow users to add, update, and delete items in the inventory and display the current stock

**TOTAL (THEORY AND PRACTICAL): 75 PERIODS**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:** After completion of the course, students will be able to:

- CO1: Demonstrate knowledge on C Programming constructs
- CO2: Design and implement applications using arrays and strings
- CO3: Develop and implement modular applications in C using functions and pointers
- CO4: Develop applications in C using structures and unions
- CO5: Develop applications using sequential and random-access file processing

### TEXT BOOKS

1. Kernighan, B.W and Ritchie, D.M, "The C Programming language", Second Edition, Pearson Education, 2015.
2. Paul Deitel and Harvey Deitel, "C How to Program", 9th edition, Pearson, 2021
3. E Balagurusamy, "Programming in ANSI C", Eighth Edition, McGraw Hill Education, 2019.

### REFERENCE BOOKS

1. Yashwant Kanetkar, Let us C, 17th Edition, BPB Publications, 2020.
2. Byron S. Gottfried, "Schaum's Outline of Theory and Problems of Programming with C", McGraw-Hill Education, 1996.
3. Peter van der Linden, "Expert C Programming", Pearson, 1994.
4. Reema Thareja, "Programming In C", Second Edition, Oxford University Press India, 2016.

Course Code	<b>ELECTRONIC DEVICES AND CIRCUITS</b>	L	T	P	C
EC3101		3	0	2	4

### COURSE OBJECTIVES:

- To give a comprehensive exposure to all types of devices and circuits constructed with discrete components.
- To understand the methods of biasing transistors and JFETs.
- To analyse the performance of the small signal model of transistors and JFET circuits.
- To design and analyse single stage amplifier circuits.
- To analyse the frequency response of small signal amplifiers.

### UNIT I 9 SEMICONDUCTOR DEVICES

PN junction diode, Zener diode, BJT, JFET, MOSFET, SCR, UJT –structure, operation and V-I characteristics, diffusion and transition capacitance - Rectifiers – Half Wave and Full Wave Rectifier and Bridge rectifier, Zener as regulator.

### UNIT II 9 BIASING OF BJT, JFET AND MOSFET

BJT– Need for biasing - DC Load Line and Bias Point – DC analysis of Transistor circuits - Various biasing methods of BJT–Bias Circuit Design - Thermal stability - Stability factors - Bias compensation techniques using Diode, thermistor and sensistor – Biasing BJT Switching Circuits  
 JFET - DC Load Line and Bias Point - Various biasing methods of JFET - JFET Bias Circuit Design - MOSFET Biasing - Biasing FET Switching Circuits.

<b>UNIT III</b>	<b>BJT AMPLIFIERS</b>	9
Small Signal Hybrid $\pi$ equivalent circuit of BJT – Early effect - Analysis of CE, CC and CB amplifiers using Hybrid $\pi$ equivalent circuits - AC Load Line Analysis- Darlington Amplifier - Bootstrap technique - Cascade, Cascode configurations - Differential amplifier, Basic BJT differential pair – Small signal analysis and CMRR.		
<b>UNIT IV</b>	<b>SINGLE STAGE FET, MOSFET AMPLIFIERS</b>	9
Small Signal Hybrid $\pi$ equivalent circuit of FET and MOSFET- Analysis of CS, CD and CG amplifiers using Hybrid $\pi$ equivalent circuits - Basic FET differential pair- Bi CMOS circuits.		
<b>UNIT V</b>	<b>FREQUENCY RESPONSE OF AMPLIFIERS</b>	9
Amplifier frequency response – Frequency response of transistor amplifiers with circuit capacitors – BJT frequency response – short circuit current gain - cutoff frequency – $f_{\alpha}$ , $f_{\beta}$ and unity gain bandwidth – Miller effect - frequency response of FET - High frequency analysis of CE and MOSFET CS amplifier-- Transistor Switching Times.		

**TOTAL: 45 PERIODS**  
**30 PERIODS**

**PRACTICAL EXERCISES:**

1. Characteristics of PN Junction Diode and Zener diode.
2. Full Wave Rectifier with Filters.
3. Design of Zener diode Regulator.
4. Common Emitter input-output Characteristics
5. MOSFET Drain current and Transfer Characteristics.
6. Frequency response of CE and CS amplifiers.
7. Frequency response of CB and CC amplifiers.
8. CMRR measurement of Differential Amplifier

**Course Outcomes:**

At the end of the course the students will be able to

- CO1: Explain the structure and working operation of basic electronic devices.  
 CO2: Design biasing circuits for BJT and JFET circuits.  
 CO3: Analyze the performance DC and small signal characteristics of BJT and FET.  
 CO4: Analyze the single stage amplifiers.  
 CO5: Analyze the frequency response characteristics of BJT and FET amplifiers.

Course Code	<b>Heritage of Tamils</b>	L	T	P	C
HS3101		1	0	0	1

**UNIT I Language and Literature 3**

Language Families in India – Dravidian Languages – Tamil as a Classical Language – Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature – Management Principles in Thirukural – Tamil Epics and Impact of Buddhism & Jainism in Tamil Land – Bakthi Literature Azhwars and Nayanmars – Forms of minor Poetry – Development of Modern literature in Tamil – Contribution of Bharathiyar and Bharathidhasan.

**UNIT II Heritage – Rock Art Paintings to Modern Art – Sculpture 3**

Hero stone to modern sculpture – Bronze icons – Tribes and their handicrafts – Art of temple car making – Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments – Mridhangam, Parai, Veenai, Yazh and Nadhaswaram – Role of Temples in Social and Economic Life of Tamils

**UNIT III Folk and Martial Arts 3**

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance – Sports and Games of Tamils.

**UNIT IV Thinai Concept of Tamils 3**

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature – Aram Concept of Tamils – Education and Literacy during Sangam Age – Ancient Cities and Ports of Sangam Age – Export and Import during Sangam Age – Overseas Conquest of Cholas.

**UNIT V Contribution of Tamils to Indian National Movement and Indian Culture 3**

Contribution of Tamils to Indian Freedom Struggle – The Cultural Influence of Tamils over the other parts of India – Self – Respect Movement – Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

**TOTAL: 15 PERIODS**

**TEXT – CUM – REFERENCE BOOKS**

1. Social Life of Tamils (Dr. K.K. Pillay) A joint publication of TNTB & ESC and RMRL – (in print)
2. Social Life of the Tamils – The Classical Period (Dr. S. Singaravelu) (Published by: International Institute of Tamil Studies).
3. Historical Heritage of the Tamils (Dr. S.V. Subatamanian, Dr.K.D. Thirunavukkarasu) (Published by: International Institute of Tamil Studies).
4. The Contributions of the Tamils to Indian Culture (Dr.M.Valarmathi) (Published by: International Institute of Tamil Studies.)

5. Keeladi – Sangam City Civilization on the banks of river Vaigai (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
6. Studies in the History of India with Special Reference to Tamil Nadu (Dr. K.K.Pillay) (Published by: The Author)
7. Porunai Civilization (Jointly Published by: Department of Archaeology & Tamil Nadu Text Book and Educational Services Corporation, Tamil Nadu)
8. Journey of Civilization Indus to Vaigai (R. Balakrishnan) (Published by: RMRL).

Course Code	<b>Employability Enhancement Skills – I</b>	L	T	P	C
ES3101		0	0	2	1

**COURSE OBJECTIVES:**

- To categorize, apply and use thought process to understand the concepts of Quantitative methods to enhance problem solving skills.
- To prepare and explain the fundamentals related to various possibilities with numeric ability and probabilities related to quantitative aptitude.
- To critically evaluate numerous possibilities related to puzzles

**UNIT I** **Numbers** **6**  
 Introduction – Classification of numbers – Formation of Numbers (Small & Large) –Place Value – Face Value – Divisibility Rule – Prime, Composite Numbers – Prime Factorization – Number of factors – Number of factors (Odd & Even) – Sum of factors – Successors and Predecessors – Greatest Integer Value – Vedic Mathematics – Trailing Zeroes – Unit Digits–Remainder Theorem – Real Number – Rational Numbers: Integers, Fractions – Comparison of Numbers – Operations on fractions – Scientific Notation

**UNIT II** **Problems on Letters, Numbers and Symbols** **6**  
 Factors and Multiples, LCM and HCF – Relationship between LCM and HCF – Factorial – Simplification – VBODMAS – Square, Square Root – Cube, Cube Root – Exponents & Powers (Surds and Indices) – Sequence & Series: Arithmetic Progression – Geometric Progression – Special Progression, Letter Series, Number Series, Alpha – Numeric Series, Continuous Pattern Series

**UNIT III** **Verbal and Non – Verbal Reasoning** **6**  
 Verbal Reasoning – Analogy: Completing the Analogous pair, Direct Analogy, Choosing the Analogous pair, Double Analogy, Choosing a Similar Word, Detecting Analogies, Multiple word Analogy, Number Analogy, Alphabet Analogy – Classification: Odd Words and Numerals – Coding and Decoding: Letter, Number, Symbol, Matrix, Substitution, Deciphering Message Word, Number and Symbols. Non – Verbal Reasoning Figure Series – Missing figure, Incorrect figure – Analogy: Similarity Related Pair, Similarity Related figures, unrelated figures, Group of figures.

**UNIT IV** **Ratio and Proportion** **6**  
 Introduction – Ratio – Proportion: Direct and Indirect – Unitary Method – Problems on Ages – Chain Rule – Partnership – Mixture or Allegation – Time and Work: Individual, Group, Efficiency, Wages – Pipes and Cistern: Inlet, Outlet, and Leakage

## **UNIT V Percentage**

**6**

Introduction – Percentages in real life – Profit and Loss – Discount – Simple Interest – Compound Interest – Relationship between Simple Interest and Compound Interest – Overhead Expenses and GST.

**TOTAL: 30 PERIODS**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:** After the completion of the course, students will be able to

C01: Develop the arithmetic ability and properties of numbers that we use in day to day life,

C02: Demonstrate the logic behind the formation of numbers, alphabet series.

C03: Apply the reasoning methods logically and evaluate complex relationships between the variables and numbers.

C04: Use the concept of ratios and proportion in ages and partnership problems.

C05: Apply the shortcuts of the mathematical tricks to reduce the time duration in problem solving.

### **TEXT BOOKS**

1. “Quantitative Aptitude for Competitive Examinations” by R.S. Aggarwal – 2022”
2. “Teach Yourself Quantitative Aptitude” by Arun Sharma – 2017
3. “A modern approach to verbal and non – verbal reasoning” by R.S. Aggarwal – 2017

### **REFERENCES**

1. “Shortcuts in Mathematics” by Akhilesh Khare – 2016
2. “Vedic maths for competitive exams” by Ravi Shankar – 2016
3. “Quantitative Aptitude for Competitive Examination” by Abhijit Guha – 2017

## Semester II

Course Code	<b>STATISTICS AND NUMERICAL METHODS</b>	L	T	P	C
MA3201		3	1	0	4

### COURSE OBJECTIVES:

- This course aims at providing the necessary basic concepts of a few statistical and numerical methods and give procedures for solving numerically different kinds of problems occurring in engineering and technology.
- To acquire the knowledge of testing hypotheses for small and large samples this plays an important role in real life problems.
- To introduce the basic concepts of solving algebraic and transcendental equations.
- To introduce the numerical techniques of interpolation in various intervals and numerical techniques of differentiation and integration which plays an important role in engineering and technology disciplines.
- To acquire the knowledge of various techniques and methods of solving ordinary differential equations.

### UNIT I 12 **TESTING OF HYPOTHESIS**

Sampling distributions - Tests for single mean, and difference of means (Large and small samples) - Tests for single variance and equality of variances – Chi square test for goodness of fit – Independence of attributes.

### UNIT II 12 **DESIGN OF EXPERIMENTS**

One way and two-way classifications - Completely randomized design – Randomized block design Latin square design.

### UNIT III 12 **SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS**

Solution of algebraic and transcendental equations - Newton Raphson method- Solution of linear system of equations - Gauss elimination method – Pivoting - Gauss Jordan method – Iterative methods of Gauss Jacobi and Gauss Seidel - Eigenvalues of a matrix by Power method.

### UNIT IV 12 **INTERPOLATION, NUMERICAL DIFFERENTIATION AND NUMERICAL INTEGRATION**

Lagrange's and Newton's divided difference interpolation- Newton's forward and backward difference interpolation – Approximation of derivatives using interpolation polynomials – Numerical single integrations using Trapezoidal and Simpson's 1/3 rules.

### UNIT V 12 **NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATION**

Single step methods: Taylor's series method - Euler's method - Modified Euler's method - Fourth order Runge-Kutta method for solving first order differential equations - Multi step methods: Milne's predictor & corrector methods for solving first order differential equations.

**TOTAL: 60 PERIODS**

### Course Outcomes:

Upon successful completion of the course, students will be able to:

CO1: Apply the concept of testing of hypotheses for small and large samples in real life problems.

- C02: Apply the basic concepts of classifications of design of experiments in the field of agriculture.
- C03: Develop the numerical techniques of interpolation in various intervals and apply the numerical techniques of differentiation and integration for engineering problems.
- C04: Understand the knowledge of various techniques and methods for solving first and second order ordinary differential equations.
- C05: Solve the partial and ordinary differential equations with initial and boundary conditions by using certain techniques with engineering applications.

**Text Books:**

1. Grewal B.S., and Grewal, J.S., "Numerical Methods Engineering Science", Khanna Publishers, 10th Edition, New Delhi, 2015.
2. Johnson, R.A. Miller, Freund J., "Miller and Freund's Probability and Statistics for Engineers", Pearson Education, Asia, 8th Edition, 2015.

5. Spiegel. M.R., Schiller. J. and Srinivasan. R.A., "Schaum's Outlines on Probability and Statistics", Tata McGraw Hill Edition, 4th Edition, 2012.
6. Walpole. R.E., Myers. R.H., Myers. S.L. and Ye. K., "Probability and Statistics for Engineers and Scientists", 9th Edition, Pearson Education, Asia, 2010.

Course Code	Communicative English -II	L	T	P	C
HS3202		3	0	2	4

**COURSE OBJECTIVES:**

- To engage learners in meaningful language activities to improve their LSRW skills
- To enhance learners awareness of general rules of writing for specific audiences
- To help learners understand the purpose, audience, contexts of different types of writing
- To develop analytical thinking skills for problem solving in communicative contexts
- To cultivate the learners to understand job applications and interviews for internship and placements.

**UNIT I****Making Comparisons****9**

Listening – Evaluative Listening: Advertisements, Product Descriptions, – Audio/ video  
Speaking – Marketing a product, Persuasive Speech Techniques. Reading – Reading advertisements, user manuals, brochures Writing – Letter to the editor; Compare and Contrast Essay Grammar – Impersonal passive voice; Prepositional phrases Vocabulary – Contextual meaning of words

**UNIT II****Expressing Casual Relations in Speaking and Writing****9**

Listening – Listening to longer technical talks and completing-gap filling exercises. Listening technical information from podcasts Speaking – Describing and discussing the reasons of accidents or disasters based on news reports Reading – Reading longer technical texts/Novels

Writing – Writing responses to complaints; Problem solution Essay  
Grammar –Subject – Verb Agreement, Infinitive and Gerunds Vocabulary – Adverbs.

**UNIT III** **Problem Solving** **9**

Listening–Watching movie scenes/documentaries depicting a technical problem and suggesting solutions. Speaking – Group Discussion (based on case studies), – techniques and Strategies. Reading – Case Studies, excerpts from literary texts, news reports etc. Writing – Checklists, Argumentative Essay Grammar –Error correction; If conditional sentences Vocabulary – Compound Words, Sentence Completion.

**UNIT IV** **Reporting of Events and Research** **9**

Listening – Listening Comprehension based on news reports and documentaries. Speaking – Interviewing, Presenting an oral report, Mini presentations on select topics Reading – Newspaper articles Writing –Industrial visit Report, Accident Report, Survey Report Grammar– Reported Speech, Modals Vocabulary–Conjunctions, use of prepositions.

**UNIT V** **The Ability to Put Ideas or Information Cogently** **9**

Listening – Listening to TED Talks, Presentations, Formal job interviews Speaking – Mock Interview, Making presentations with visual aids Reading – Company profiles, Statement of Purpose, (SOP), an excerpt of interview with professionals Writing –Job / Internship application – Cover letter with Resume Grammar – Numerical adjectives, Relative Clauses Vocabulary–Idioms.

**List of Exercises:**

1. Listening /Reading Comprehension
2. Introducing Oneself
3. Summary of a Podcast
4. Mini Presentation on General topic (ICT tools)
5. Autobiography of a famous Personality
6. Narrating an unforgettable event
7. Drafting an Email (printed format)
8. Developing a story using given Vocabulary
9. Group Discussion
10. Mock Interview

**TOTAL (THEORY AND PRACTICAL): 75 PERIODS**

**COURSE OUTCOMES:** After the completion of the course, students will be able to

- C01: Compare and contrast products and ideas in technical texts.  
C02: Identify cause and effects in events, industrial processes through technical texts  
C03: Analyze problems in order to arrive at feasible solutions and communicate them orally and in the written format.  
C04: Report events and the processes of technical and industrial nature.  
C05: Present their opinions in a planned and logical manner, and draft effective resumes in context of job search.

**TEXT BOOKS**

1. English for Engineers & Technologists (2020 edition) Orient Blacks wan Private Ltd. Department of English, Anna University.
2. English for Science & Technology Cambridge University Press 2021. Authored by Dr. Veena Selvam, Dr. Sujatha Priyadarshini, Dr. Deepa Mary Francis, Dr. KN. Shoba, and Dr. Lourdes Jovani, Department of English, Anna University.

3. Professional English-II, V.K. Publications, Dr.S.N. Mahalakshmi.

### REFERENCES

Course Code	<b>ELECTRONIC CIRCUITS</b>	L	T	P	C
EC3201		3	0	2	4

### COURSE OBJECTIVES:

- To analyze feedback amplifiers.
- To design and test the performance of oscillator circuits.
- To study tuned amplifiers.
- To analyze and design multi-vibrators and wave shaping circuits.
- To design and analyze the power amplifiers and DC convertors.

### UNIT I 9 **FEEDBACK AMPLIFIERS AND STABILITY**

Feedback Concepts – gain with feedback – effect of feedback on gain stability, distortion, bandwidth, input and output impedances; topologies of feedback amplifiers – analysis of series-series, shunt-shunt and shunt-series feedback amplifiers-stability problem-Gain and Phase-margins-Frequency compensation.

### UNIT II 9 **OSCILLATORS**

Barkhausen criterion for oscillation – Phase shift, Wien bridge - Hartley & Colpitt’s oscillators – Clapp oscillator-Ring oscillators and crystal oscillators – oscillator amplitude stabilization.

### UNIT III 9 **TUNED AMPLIFIERS**

Coil losses, unloaded and loaded Q of tank circuits, small signal tuned amplifiers –Analysis of Capacitor coupled single tuned amplifier – double tuned amplifier - effect of cascading single tuned and double tuned amplifiers on bandwidth – Stagger tuned amplifiers - Stability of tuned amplifiers –Neutralization - Hazeltine neutralization method.

### UNIT IV 9 **WAVE SHAPING AND MULTIVIBRATOR CIRCUITS**

Pulse circuits – attenuators – RC integrator and differentiator circuits – diode clampers and clippers –Multivibrators - Schmitt Trigger- UJT Oscillator.

### UNIT V 9 **POWER AMPLIFIERS AND DC CONVERTERS**

Power amplifiers- class A-Class B-Class AB-Class C-Power MOSFET-Temperature Effect- Class AB Power amplifier using MOSFET –DC/DC converters – Buck, Boost, Buck-Boost analysis and design.

**TOTAL: 45 PERIODS**

**LIST OF EXPERIMENTS**

**30 PERIODS**

**Design and analyze the following circuits.**

1. Series and Shunt feedback amplifiers-Frequency response, Input and output impedance.
2. RC Phase shift oscillator and Wien Bridge Oscillator
3. RC Integrator and Differentiator circuits
4. Astable and Monostable multivibrators
5. Clippers and Clampers.

**Design and analyze the following circuits using Simulation tools.**

1. Wein Bridge Oscillator.
2. Astable and Monostable multivibrators.
3. Schmitt Trigger circuit.

**TOTAL: 75 PERIODS**

**Course Outcomes:**

At the end of the course the students will be able to

CO1: Design and analyze feedback amplifiers

CO2: Design of RC and LC oscillator circuits.

CO3: Analyze the performance single and double tuned amplifiers.

CO4: Analyze different types of multivibrator circuits.

CO5: Design power amplifiers and DC converters.

**Text Books:**

1. Adel .S. Sedra, Kenneth C. Smith, "Micro Electronic Circuits", Oxford University Press, 7th Edition, 2014.
2. Jacob Millman, "Microelectronics", McGraw Hill, 2nd Edition, Reprinted, 2009.

Millman and Halkias. C., Integrated Electronics, TMH, 2007.

Course Code	<b>CIRCUIT THEORY</b>	L	T	P	C
EC3202		3	0	2	4

**COURSE OBJECTIVES:**

- To learn the basic concepts and behaviour of DC and AC circuits.
- To understand various methods of circuit/ network analysis using network theorems.
- To understand the transient and steady state response of the circuits subjected to DC excitations and AC with sinusoidal excitations.
- To study the transients and resonance in RL, RC and RLC circuits
- To learn the concept of coupling in circuits and topologies.

<b>UNIT I</b>	<b>CIRCUIT ANALYSIS</b>	<b>9</b>
<p>Components of electric Circuits, Charge, current, Voltage and Power, Voltage and Current Sources, Ohms Law, Kirchoff's Current Law, Kirchoff's voltage law, The single Node - Pair Circuit, series and Parallel Connected Independent Sources, Resistors in Series and Parallel, voltage and current division, Nodal analysis, Mesh analysis.</p>		
<b>UNIT II</b>	<b>NETWORK THEOREM AND DUALITY</b>	<b>9</b>
<p>Circuit Analysis techniques - Linearity and superposition, Thevenin and Norton Equivalent Circuits, Maximum Power Transfer, Delta-Wye Conversion. Duals, Dual circuits. Analysis using dependent current sources and voltage sources.</p>		
<b>UNIT III</b>	<b>SINUSOIDAL STEADY STATE ANALYSIS</b>	<b>9</b>
<p>Sinusoidal Steady - State analysis , Characteristics of Sinusoids, The Complex Forcing Function, The Phasor, Phasor relationship for R, L, and C, impedance and Admittance, Nodal and Mesh Analysis, Phasor Diagrams, AC Circuit Power Analysis, Instantaneous Power, Average Power, apparent Power and Power Factor, Complex Power.</p>		
<b>UNIT IV</b>	<b>TRANSIENTS AND RESONANCE IN RLC CIRCUITS</b>	<b>9</b>
<p>Basic RL and RC Circuits, The Source- Free RL Circuit, The Source-Free RC Circuit, The Unit-Step Function, Driven RL Circuits, Driven RC Circuits, RLC Circuits, Frequency Response, Parallel Resonance, Series Resonance, Quality Factor.</p>		
<b>UNIT V</b>	<b>COUPLED CIRCUITS AND TOPOLOGY</b>	<b>9</b>
<p>Magnetically Coupled Circuits, mutual Inductance, the Linear Transformer, the Ideal Transformer, An introduction to Network Topology, Trees and General Nodal analysis, Links and Loop analysis.</p>		

**TOTAL : 45 PERIODS**

<b>PRACTICAL EXERCISES:</b>	<b>30 PERIODS</b>
<ol style="list-style-type: none"><li>1. Verifications of KVL &amp; KCL.</li><li>2. Verifications of Thevenin &amp; Norton theorem.</li><li>3. Verification of Superposition Theorem.</li><li>4. Verification of maximum power transfer Theorem</li><li>5. Determination of Resonance Frequency of Series &amp; Parallel RLC Circuits.</li><li>6. Transient analysis of RL and RC circuits.</li></ol>	

#### **Course Outcomes:**

Upon Completion of the course the students will be able to

CO1: Apply the basic concepts of circuit analysis such as Kirchoff's laws, mesh current and node voltage method for analysis of DC and AC circuits.

CO2: Apply suitable network theorems and analyze AC and DC circuits

CO3: Analyze steady state response of any R, L and C circuits

CO4: Analyze the transient response for any RC, RL and RLC circuits and frequency response of parallel and series resonance circuits.

CO5: Analyze the coupled circuits and network topologies.

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Text Books:**

Course Code	<b>DIGITAL SYSTEM DESIGN</b>	L	T	P	C
EC3203		3	0	2	4

**COURSE OBJECTIVES:**

- To present the fundamentals of digital circuits and simplification methods
- To practice the design of various combinational digital circuits using logic gates
- To bring out the analysis and design procedures for synchronous and asynchronous Sequential circuits
- To learn integrated circuit families.
- To introduce semiconductor memories and related technology

**UNIT I** **BASIC CONCEPTS** 9  
 Review of number systems-representation-conversions, Review of Boolean algebra-theorems, sum of product and product of sum simplification, canonical forms minterm and maxterm, Simplification of Boolean expressions-Karnaugh map, completely and incompletely specified functions, Implementation of Boolean expressions using universal gates, Tabulation methods.

**UNIT II** **COMBINATIONAL LOGIC CIRCUITS** 9  
 Problem formulation and design of combinational circuits - Code-Converters, Half and Full Adders, Binary Parallel Adder – Carry look ahead Adder, BCD Adder, Magnitude Comparator, Decoder, Encoder, Priority Encoder, Mux/Demux, Case study: Digital trans-receiver / 8 bit Arithmetic and logic unit, Parity Generator/Checker, Seven Segment display decoder

<b>UNIT III</b>	<b>SYNCHRONOUS SEQUENTIAL CIRCUITS</b>	9
Latches, Flip flops – SR, JK, T, D, Master/Slave FF, Triggering of FF, Analysis and design of clocked sequential circuits – Design - Moore/Mealy models, state minimization, state assignment, lock - out condition circuit implementation - Counters, Ripple Counters, Ring Counters, Shift registers, Universal Shift Register. Model Development: Designing of rolling display/real time clock		
<b>UNIT IV</b>	<b>ASYNCHRONOUS SEQUENTIAL CIRCUITS</b>	9
Stable and Unstable states, output specifications, cycles and races, state reduction, race free assignments, Hazards, Essential Hazards, Fundamental and Pulse mode sequential circuits, Design of Hazard free circuits		
<b>UNIT V</b>	<b>LOGIC FAMILIES AND PROGRAMMABLE LOGIC</b>	9
Logic families- Propagation Delay, Fan - In and Fan - Out - Noise Margin - RTL ,TTL,ECL, CMOS - Comparison of Logic families - Implementation of combinational logic/sequential logic design using standard ICs, PROM, PLA and PAL, basic memory, static ROM,PROM,EPROM,EEPROM EAPROM.		

**TOTAL : 45 PERIODS**  
**30 PERIODS**

**PRACTICAL EXERCISES:**

1. Design of adders and subtractors & code converters.
2. Design of Multiplexers & Demultiplexers.
3. Design of Encoders and Decoders.
4. Design of Magnitude Comparators
5. Design and implementation of counters using flip-flops
6. Design and implementation of shift registers.

**Course Outcomes:**

At the end of the course the students will be able to

CO1: Use Boolean algebra and simplification procedures relevant to digital logic.

CO2: Design various combinational digital circuits using logic gates.

CO3: Analyze and design synchronous sequential circuits.

CO4: Analyze and design asynchronous sequential circuits.

CO5: Build logic gates and use programmable devices.

Course Code	<b>Data Structures and Algorithms Using C</b>	L	T	P	C
CS3204		3	0	2	4

### COURSE OBJECTIVES:

- To understand the basic concepts of linear data structures like arrays and linked lists.
- To grasp the concept of stacks and queues as a linear data structure and the operations upon them.
- To understand the fundamental concepts of hierarchical Tree data structures.
- To explore optimization strategies for indexing structures and graph algorithms.
- To understand the concept of searching for quick data retrieval, sorting for arranging data, hash functions strategies for optimized data storage.

### UNIT I 12

#### Lists

Abstract Data Types (ADTs) – List ADT – Array-based implementation – Linked list implementation – Singly linked lists – Circularly linked lists – Doubly-linked lists – Applications of lists – Polynomial ADT – Radix Sort – Multilists.

#### Coding Exercises:

1. Write a C programs to implement single linked list ADT to perform following operations.
  - a) insert an element into a list.
  - b) delete an element from list.
  - c) search for a key element in list.
  - d) count number of nodes in list.
2. Write a C programs to implement doubly linked list ADT to perform following operations.
  - a) insert an element into a list at the end.
  - b) delete middle element from list.
  - c) print the element in reverse order.
3. Write a C programs to Perform Polynomial Addition using singly linked list.

#### Problems-solving Assignments:

1. Write a program to multiply every element of the linked list with 10.
2. Write a program to input an n digit number. Now, break this number into its individual digits and then store every single digit in a separate node thereby forming a linked list. For example, if you enter 12345, then there will 5 nodes in the list containing nodes with values 1, 2, 3, 4, 5.

### UNIT II 12

#### Stacks and Queues

Stack ADT – Operations – Applications – Balancing Symbols – Evaluating arithmetic expressions- Infix to Postfix conversion – Function Calls – Queue ADT – Operations – Circular Queue – DeQueue – Applications of Queues.

#### Coding Exercises:

1. Write a C programs to implement a stack operations push, pop, top, and is Empty using a linked list.
2. Write a C programs to implement a queue operations enqueue, dequeue, front, is Empty using a linked list.
3. Write C programs to Convert Infix to Postfix Expression using Stack ADT.

#### Problems-solving Assignments:

1. Write a program to implement a stack that stores names of students in the class.
2. Write a program to implement a stack using a linked list
3. Write a program to create a queue which permits insertion at any vacant location at the rear end.

**UNIT III** **Trees** **12**

Tree ADT – Tree Traversals – Binary Tree ADT – Expression trees – Binary Search Tree ADT – AVL Trees – Splay trees- Red Black Tree -Priority Queue (Heaps) – Binary Heap.

**Coding Exercises:**

1. Write a C programs to implement a binary search tree with the following operations:
  - a. Insert an element into a binary search tree.
  - b. Delete an element from a binary search tree.
  - c. Search for a key element in a binary search tree.
2. Write a C programs that use recursive functions to traverse the given binary tree.
  - a) Preorder b) inorder c) postorder.
3. Write C programs to implement an AVL Tree.

**Problems-solving Assignments:**

1. Write a C program for a Splay Tree for insertion and search operations.
2. Write a C program to implementation the insertion operation for a Red-Black Tree.
3. Write a C program a Max-Heap data structure operations insert(), extractMax(), and getMax().

**UNIT IV** **Indexing and Graphs** **12**

Indexing-B-Tree – B+ Tree. Graph Definition – Representation of Graphs – Types of Graphs – Breadth-first traversal – Depth-first traversal – Bi-connectivity – Euler circuits – Topological Sort – Dijkstra’s algorithm – Minimum Spanning Tree – Prim’s algorithm – Kruskal’s algorithm.

**Coding Exercises:**

1. Write a C program that demonstrates B-Tree operation insertion, search, and display.
2. Write a C program for Dijkstra's single source shortest path algorithm.
3. Write a C program for Prim's Minimum Spanning Tree (MST) algorithm.

**Problems-solving Assignments:**

1. Write a C program that demonstrates Breadth-First Traversal (BFS) in a graph using an adjacency list representation.
2. Write a C program that demonstrates topological sorting using Depth-First Search (DFS) on a directed acyclic graph.
3. Write a C program that demonstrates Kruskal's algorithm for finding the Minimum Spanning Tree (MST) of a graph.

**UNIT V** **Searching, Sorting and Hashing Techniques** **12**

Searching – Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shell sort – Merge Sort – Quick Sort. Hashing – Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.

**Coding Exercises:**

1. Write a C programs to implement binary search using a recursive function.
2. Write a C program to implement the Insertion Sort algorithm.
3. Write a C program to implement the separate chaining technique in hashing.

**Problems-solving Assignments:**

1. Write a C program to implement the linear search algorithm using a nonrecursive approach.
2. Write a C program to implement the Quick Sort algorithm.
3. Write a C program to implement a hash table with rehashing.

**TOTAL (THEORY AND PRACTICAL): 60 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:** After successful completion of the course, the students will be able to

CO1: Articulate linear data structures and legal operations permitted on them.

CO2: Implement stack and queue using array and linked list.

CO3: Articulate Tree data structures and legal operations permitted on them.

CO4: Understand the indexing and graph concepts and applications to solve different real time problems.

CO5: Apply a suitable algorithm for searching, sorting and hashing.

Course Code	Tamils And Technology			
HS3201	L	T	P	C
	1	0	0	1

### UNIT I **Weaving and Ceramic Technology** **3**

Weaving Industry during Sangam Age – Ceramic technology – Black and Red Ware Potteries (BRW) – Graffiti on Potteries.

### UNIT II **Design and Construction Technology** **3**

Designing and Structural construction House & Designs in household materials during Sangam Age – Building materials and Hero stones of Sangam age – Details of Stage Constructions in Silappathikaram – Sculptures and Temples of Mamallapuram – Great Temples of Cholas and other worship places – Temples of Nayaka Period – Type study (Madurai Meenakshi Temple) – Thirumalai Nayakar Mahal – Chetti Nadu Houses, Indo – Saracenic architecture at Madras during British Period.

### UNIT III **Manufacturing Technology** **3**

Art of Ship Building – Metallurgical studies – Iron industry – Iron smelting, steel – Copper and gold Coins as source of history – Minting of Coins – Beads making – industries Stone beads – Glass beads – Terracotta beads – Shell beads/ bone beats – Archeological evidences – Gem stone types described in Silappathikaram.

Arithmetic Mean – Median – Mode – Variance – Standard Deviation – Measures of Dispersion – Coefficient of Variation.

**UNIT III Arithmetic and Logical Reasoning 6**

Introduction – Mathematical Operations – Blood Relations: Direct, Indirect, coded – Problems on Cubes and Dices: Face identification – Folding and cutting Images – Counting technique of figures – Distance & Direction

**UNIT IV Applied Mathematics 6**

Mensuration (2D&3D): Square, Rectangle, Triangle, Circle, Parallelogram, Rhombus, Trapezoid, Quadrilateral, Cube, Cuboid, Cylinder, Cone, Sphere, Miscellaneous – Trigonometry: Ratio, Identities, Heights and Distances – Algebra – Logarithm – Geometry.

**UNIT V Verbal and Logical Reasoning 6**

Introduction – Venn diagram – Syllogism – Data Sufficiency – Decision Making – Puzzle: Number Puzzle, Letter Puzzle – Ranking Test – Data Arrangement: Linear, Circular, Miscellaneous – Critical Reasoning.

**TOTAL: 30 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:** After the completion of the course, students will be able to

C01: Use their logical thinking and analytical abilities to solve Quantitative aptitude questions from company specific and other competitive tests.

C02: Solve questions related to Time etc. from company specific and other competitive tests.

C03: Illustrate and solve puzzle related questions from specific and other competitive tests

**TEXT BOOKS:**

**Semester III**

Course Code	<b>RANDOM PROCESS AND LINEAR ALGEBRA</b>	L	T	P	C
MA3301		0	0	2	1

**COURSE OBJECTIVES:**

CO4: Understand the fundamental concepts of probability with a thorough knowledge of standard distributions that can describe certain real-life phenomenon.

CO5: Understand the basic concepts of one- and two-dimensional random variables and apply them to model engineering problems.

**Text Books:**

Course Code	<b>SIGNAL PROCESSING FOR COMMUNICATION ENGINEERS</b>	L	T	P	C
<b>AC3301</b>		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>

**COURSE OBJECTIVES:**

- To introduce the concept of analyzing discrete time signals & systems in the time and frequency domain through mathematical representation.
- To study the various time to frequency domain transformation techniques.
- To understand the computation algorithmic steps for Fourier Transform.
- To compute Fourier Transform using Fast Fourier Transform(FFT) Algorithm.
- To study about multirate signal processing concepts and techniques.

**UNIT I INTRODUCTION 9**

Classification of systems: Continuous, discrete, linear, causal, stable, dynamic, recursive, time variance; classification of signals: continuous and discrete, energy and power; mathematical representation of signals; spectral density; sampling techniques, quantization, quantization error, Nyquist rate, aliasing effect. Digital signal representation

**UNIT II DISCRETE TIME SYSTEM ANALYSIS 9**

Z-transform and its properties, inverse z-transforms; difference equation – Solution by z-transform, application to discrete systems - Stability analysis, frequency response – Convolution – Introduction to Fourier Transform– Discrete time Fourier transform.

**UNIT III DISCRETE FOURIER TRANSFORM & COMPUTATION 9**

DFT properties, magnitude and phase representation - Computation of DFT using FFT algorithm – DIT & DIF - FFT using radix 2 – Butterfly structure.

<b>UNIT IV</b>	<b>DESIGN OF DIGITAL FILTERS</b>	<b>9</b>
FIR & IIR filter realization – Parallel & cascade forms. FIR design: Windowing Techniques – Need and choice of windows – Linear phase characteristics. IIR design: Analog filter design - Butterworth and Chebyshev approximations; digital design using impulse invariant and bilinear transformation - Warping, prewarping -Frequency transformation.		
<b>UNIT V</b>	<b>MULTIRATE SIGNAL PROCESSING</b>	<b>9</b>
Decimation - Interpolation – Sampling Rate conversion by a rational factor I/D – Multistage implementation of sampling rate conversion – Polyphase filter structures – Applications of multirate signal processing		
		<b>TOTAL: 45 PERIODS</b>

PRACTICAL EXERCISES: MATLAB / EQUIVALENT SOFTWARE PACKAGE/ DSP PROCESSOR BASED IMPLEMENTATION **TOTAL: 30 PERIODS**

1. Generation of elementary Discrete-Time sequences
2. Linear and Circular convolutions
3. Auto correlation and Cross Correlation
4. Frequency Analysis using DFT
5. Design of FIR filters (LPF/HPF/BPF/BSF) and demonstrates the filtering operation
6. Design of Butterworth and Chebyshev IIR filters (LPF/HPF/BPF/BSF) and demonstrate the filtering operations
7. Generation of various signals and random noise
8. Implement an Up-sampling and Down-sampling operation in DSP Processor

#### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

#### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

#### **Course Outcomes:**

Upon Completion of the course the students will be able to

Course Outcomes: Upon Completion of the course the students will be able to

CO1: Summarize the Classification of Signals and Systems and various operations on signals.

CO2: Apply Fourier Transform and Z-Transform on Continuous and Discrete time signals and systems.

CO3: Apply Discrete Fourier Transform and Z-Transform on Discrete time signals and systems.

CO4: Design analog and digital Infinite and Finite Impulse Response Filters.

CO5: To study about the concept of Multirate Signal Processing

#### **Text Books:**

1. Simon Haykin, Barry Van Veen, "Signals and Systems", 2nd Edition, Wiley, 2002
2. John G. Proakis, Dimitris G. Manolakis, "Digital Signal Processing", Prentice Hall of a. India, New Delhi, 2005.

Course Code	<b>MICROPROCESSORS AND MICROCONTROLLERS</b>	L	T	P	C
EC3302		3	0	2	4

**COURSE OBJECTIVES:**

- To understand the Architecture of 8086 microprocessors.
- To learn the design aspects of I/O and Memory Interfacing circuits.
- To interface microprocessors with supporting chips.
- To study the Architecture of 8051 microcontrollers.
- To design a microcontroller-based system

**UNIT I THE 8086 MICROPROCESSOR 9**

Introduction to 8086 – Microprocessor architecture – Addressing modes - Instruction set and assembler directives – Assembly language programming – Modular Programming - Linking and Relocation - Stacks - Procedures – Macros – Interrupts and interrupt service routines – Byte and String Manipulation.

**UNIT II 8086 SYSTEM BUS STRUCTURE 9**

8086 signals – Basic configurations – System bus timing –System design using 8086 – I/O programming – Introduction to Multiprogramming – System Bus Structure – Multiprocessor configurations – Coprocessor, Closely coupled and loosely Coupled configurations – Introduction to advanced processors.

**UNIT III I/O INTERFACING 9**

Memory Interfacing and I/O interfacing - Parallel communication interface – Serial communication interface – D/A and A/D Interface - Timer – Keyboard /display controller – Interrupt controller – DMA controller – Programming and applications Case studies: Traffic Light control, LED display , LCD display, Keyboard display interface and Alarm Controller.

**UNIT IV MICROCONTROLLER 9**

Architecture of 8051 – Special Function Registers(SFRs) - I/O Pins Ports and Circuits - Instruction set - Addressing modes - Assembly language programming.

**UNIT V INTERFACING MICROCONTROLLER 9**

Programming 8051 Timers - Serial Port Programming - Interrupts Programming – LCD & Keyboard Interfacing - ADC, DAC & Sensor Interfacing - External Memory Interface- Stepper Motor and Waveform generation - Comparison of Microprocessor, Microcontroller, PIC and ARM processors

**TOTAL : 45 PERIODS  
30 PERIODS**

**PRACTICAL EXERCISES:**

**8086 Programs using kits and MASM**

1. Basic arithmetic and Logical operations
2. Move a data block without overlap
3. Code conversion, decimal arithmetic and Matrix operations.
4. Floating point operations, string manipulations, sorting and searching
5. Password checking, Print RAM size and system date
6. Counters and Time Delay

**Peripherals and Interfacing Experiments**

- 7. Traffic light controller
- 8. Stepper motor control
- 9. Digital clock
- 10. Key board and Display
- 11. Printer status
- 12. Serial interface and Parallel interface
- 13. A/D and D/A interface and Waveform Generation

**8051 Experiments using kits and MASM**

- 14. Basic arithmetic and Logical operations
- 15. Square and Cube program, Find 2’s complement of a number
- 16. Unpacked BCD to ASCII

**Course Outcomes:**

Upon Completion of the course the students will be able to

- CO1: Write ALP Programmes for fixed and Floating Point and Arithmetic operations
- CO2: Interface different I/Os with processor
- CO3: Generate waveforms using Microprocessors
- CO4: Execute Programs in 8051
- CO5: Explain the difference between simulator and Emulator

**Text Books:**

- 1. Yu-Cheng Liu, Glenn A.Gibson, “Microcomputer Systems: The 8086 / 8088 Family - Architecture, Programming and Design”, Second Edition, Prentice Hall of India, 2007.
- 2. Mohamed Ali Mazidi, Janice Gillispie Mazidi, Rolin McKinlay, “The 8051 Microcontroller and Embedded Systems: Using Assembly and C”, Second Edition, Pearson education, 2011.

**References:**

- 1. Doughlas V.Hall, “Microprocessors and Interfacing, Programming and Hardware”,TMH,2012
- 2. A.K. Ray, K.M.Bhurchandi, "Advanced Microprocessors and Peripherals" 3rd edition, Tata McGraw-Hill, 2012

Course Code	<b>ANALOG INTEGRATED CIRCUITS</b>	L	T	P	C
EC 3303		3	0	2	4

**COURSE OBJECTIVES:**

- To introduce the basic building blocks of linear integrated circuits
- To learn the linear and non-linear applications of operational amplifiers
- To introduce the theory and applications of analog multipliers and PLL
- To learn the theory of ADC, DAC and to introduce the concepts of waveform generation
- To introduce the concepts of nonlinear circuit elements and oscillators

**UNIT I BASICS OF OPERATIONAL AMPLIFIERS 9**

Current mirror and current sources, Current sources as active loads, Voltage sources, Voltage References, BJT Differential amplifier with active loads, Basic information about op-amps – Ideal Operational Amplifier - General operational amplifier stages -and internal circuit diagrams of IC

741, DC and AC performance characteristics, slew rate, Open and closed loop configurations – MOSFET Operational Amplifiers – LF155 and TL082.

**UNIT II APPLICATIONS OF OPERATIONAL AMPLIFIERS 9**

Sign Changer, Scale Changer, Phase Shift Circuits, Voltage Follower, V-to-I and I-to-V converters, adder, subtractor, Instrumentation amplifier, Integrator, Differentiator, Logarithmic amplifier, Antilogarithmic amplifier, Comparators, Schmitt trigger, Precision rectifier, peak detector, clipper and clamper, Low-pass, high-pass and band-pass Butterworth filters.

**UNIT III ANALOG MULTIPLIER AND PLL 9**

Analog Multiplier using Emitter Coupled Transistor Pair - Gilbert Multiplier cell – Variable transconductance technique, analog multiplier ICs and their applications, Operation of the basic PLL, Closed loop analysis, Voltage controlled oscillator, Monolithic PLL IC 565, application of PLL for AM detection, FM detection, FSK modulation and demodulation and Frequency synthesizing and clock synchronization

**UNIT IV CONVERTERS AND WAVEFORM GENERATORS 9**

Analog and Digital Data Conversions, D/A converter – specifications - weighted resistor type, R-2R Ladder type, A/D Converters – specifications - Flash type - Successive Approximation type - Single Slope type – Dual Slope type, Multivibrators and Triangular wave generator, Saw-tooth wave generator, Timer IC 555, Switched capacitor filter IC MF10, Frequency to Voltage and Voltage to Frequency converters.

**UNIT V NONLINEAR CIRCUIT ELEMENTS AND OSCILLATORS 9**

Introduction - Piecewise linear (PWL) circuit elements – Negative Impedance Converter (NIC) - Chua's diode - Memristive Elements (Flux and Charge control) - autonomous and nonautonomous nonlinear circuits - Chua's oscillator - Lorenz oscillator - Duffing's oscillator - MLC oscillator - Memristive oscillators (memristive Chua's oscillator, Diode Bridge-Based Memristive oscillator).

**TOTAL: 45 PERIODS**

**PRACTICAL EXERCISES:**

**TOTAL: 30 PERIODS**

1. Inverting, Non inverting and differential amplifiers.
2. Integrator and Differentiator.
3. Instrumentation amplifier
4. Astable & Monostable multivibrators using Op-amp
5. Schmitt Trigger using an op-amp.
6. Design of Differential amplifiers (current source load and active current mirror load).
7. Design of Operational Amplifiers.
8. Design of comparator circuit using op-amp
9. Design of active second order filters using Op-Amp (LPF, HPF, BPF and BSF).
10. Design of Schmitt trigger circuit using Op-Amp

**Course Outcomes:**

Upon Completion of the course the students will be able to  
 CO1 : Design linear and nonlinear applications of OP – AMPS  
 CO2 : Design applications using analog multiplier and PLL  
 CO3 : Design ADC and DAC using OP – AMPS  
 CO4 : Generate waveforms using OP – AMP Circuits  
 CO5 : Analyze Nonlinear circuit elements and oscillators

**Text Books:**

Course Code	<b>ANALOG COMMUNICATION SYSTEMS</b>	L	T	P	C
AC3301		3	0	2	4

**COURSE OBJECTIVES:**

- To introduce the concepts of various analog modulations and their spectral characteristics
- To understand the concepts of Angle Modulation and study its characteristics
- To analyse the role of random process in communication systems
- To study the effects of noises and its performance
- To evaluate the sampling and quantization in communication systems

**UNIT I AMPLITUDE MODULATION 9**

Introduction to communication system, Need for modulation, Introduction to Amplitude Modulation, Generation of AM wave, Double sideband suppressed carrier modulation (DSBSC), Generation of DSB-SC waves, Detection of DSB-SC Modulated waves, Generation of Single Side Band (SSB), Demodulation of SSB Waves, Generation of Vestigial Sideband (VSB) Modulated wave, Comparison of AM Techniques, Applications of different AM Systems, AM transmitter and receiver

**UNIT II ANGLE MODULATION 9**

Theory of Frequency Modulation: Single tone frequency modulation, Spectrum Analysis of Sinusoidal FM Wave, Narrow band FM, wide band FM, Transmission bandwidth of FM waves, Generation of FM waves: Direct FM Methods, Indirect FM, Methods; The Armstrong Method, FM Stereo Transmission and Demodulation of FM waves: FM stereo multiplexing, Phase- locked loop. Comparison of FM and AM Phase, Modulation - Comparison of AM FM and PM.

**UNIT III RANDOM PROCESS FOR COMMUNICATION SYSTEMS 9**

Review of random process, Response of LTI systems to random process, Gaussian random process: Filtered Gaussian random process, White Gaussian Noise, Noise: Sources of noise, thermal noise, shot noise and flicker noise. Filtered White noise, Narrow Band Noise, Noise Figure, Noise Bandwidth, Noise Temperature.

**UNIT IV NOISE CHARACTERIZATION 9**

Noise in AM receivers, Noise in DSB-SC receiver, Noise in SSB receiver, Noise in FM receivers, Preemphasis and de-emphasis in FM, Comparison of noise performance of AM and FM system

**UNIT V SAMPLING & QUANTIZATION 9**

Sampling process: sampling theorem for band limited signals, ideal and practical sampling, Anti aliasing and reconstruction filters, Generation and detection of Pulse Amplitude Modulation

(PAM), Generation and detection of Pulse Width Modulation (PWM), Generation and detection of Pulse Position Modulation (PPM), Generation and detection of Pulse Time Modulation (PTM), Time division Multiplexing, Crosstalk effect.

**TOTAL : 45 PERIODS**

**TOTAL : 30 PERIODS**

**Practical:**

**LIST OF EXPERIMENTS:**

1. AM- Modulator and Demodulator
2. FM - Modulator and Demodulator
3. Pre-Emphasis and De-Emphasis.
4. Signal sampling and TDM.
5. Pulse Code Modulation and Demodulation.
6. Pulse Amplitude Modulation and Demodulation.
7. Simulation of PAM, PPM and PWM

**Course Outcomes:**

Upon Completion of the course the students will be able to

CO1: Design AM communication systems

CO2: Design Angle modulated communication systems

CO3: Apply the concepts of Random Process to the design of Communication systems

CO4: Analyze the noise performance of AM and FM systems

CO5: Gain knowledge in sampling and quantization

**Text Books:**

Course Code	<b>OBJECT ORIENTED PROGRAMMING IN JAVA</b>	L	T	P	C
CS3312		3	0	2	4

**COURSE OBJECTIVES:**

- To understand Object Oriented Programming concepts and basics of Java programming language
- To know the principles of packages, inheritance and interfaces
- To develop a java application with threads and generics classes

- To define exceptions and use I/O streams
- To design and build Graphical User Interface Application using JAVA FX

**UNIT I INTRODUCTION TO OOP AND JAVA 9**

Overview of OOP – Object oriented programming paradigms – Features of Object Oriented Programming – Java Buzzwords – Overview of Java – Data Types, Variables and Arrays – Operators – Control Statements – Programming Structures in Java – Defining classes in Java – Constructors-Methods -Access specifiers - Static members- Java Doc comments

**UNIT II INHERITANCE, PACKAGES AND INTERFACES 9**

Overloading Methods – Objects as Parameters – Returning Objects –Static, Nested and Inner Classes. Inheritance: Basics– Types of Inheritance -Super keyword - Overriding – Dynamic Method Dispatch –Abstract Classes – final with Inheritance. Packages and Interfaces: Packages – Packages and Member Access –Importing Packages – Interfaces.

**UNIT III EXCEPTION HANDLING AND MULTITHREADING 9**

Handling basics – Multiple catch Clauses – Nested try Statements – Java’s Built-in Exceptions – User defined Exception. Multithreaded Programming Method: Java Thread Model–Creating a Thread and Multiple Threads – Priorities – Synchronization – Inter Thread Communication- Suspending –Resuming, and Stopping Threads –Multithreading. Wrappers – Auto boxing.

**UNIT IV I/O, GENERICS, STRING HANDLING 9**

I/O Basics – Reading and Writing Console I/O – Reading and Writing Files. Generics: Generic Programming – Generic classes – Generic Methods – Bounded Types – Restrictions and Limitations. Strings: Basic String class, methods and String Buffer Class.

**UNIT V JAVA FX EVENT HANDLING, CONTROLS AND COMPONENTS 9**

JAVA FX Events and Controls: Event Basics – Handling Key and Mouse Events. Controls: Checkbox, Toggle Button – Radio Buttons – List View – Combo Box – Choice Box – Text Controls – Scroll Pane. Layouts – Flow Pane – HBox and VBox – Border Pane – Stack Pane – Grid Pane. Menus – Basics – Menu – Menu bars – MenuItem.

**TOTAL : 45 PERIODS**

**LIST OF EXPERIMENTS:**

**30 PERIODS**

1. Solve problems by using sequential search, binary search, and quadratic sorting algorithms (selection, insertion)
2. Develop stack and queue data structures using classes and objects.
3. Develop a java application with an Employee class with Emp\_name, Emp\_id, Address, Mail\_id, Mobile\_no as members. Inherit the classes, Programmer, Assistant Professor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club funds.
4. Generate pay slips for the employees with their gross and net salary.
5. Write a Java Program to create an abstract class named Shape that contains two integers and an empty method named printArea(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method printArea( ) that prints the area of the given shape.
6. Solve the above problem using an interface.
7. Implement exception handling and creation of user defined exceptions.
8. Write a java program that implements a multi-threaded application that has three threads. First thread generates a random integer every 1 second and if the value is even, the second thread computes the square of the number and prints. If the value is odd, the third

thread will print the value of the cube of the number.

9. Write a program to perform file operations.
10. Develop applications to demonstrate the features of generics classes.
11. Develop applications using JavaFX controls, layouts and menus.
12. Develop a mini project for any application using Java concepts.

**TOTAL:75 PERIODS**

**Course Outcomes:**

**Upon Completion of the course the students will be able to**

**CO1:** Apply the concepts of classes and objects to solve simple problems

**CO2:** Develop programs using inheritance, packages and interfaces

**CO3:** Make use of exception handling mechanisms and multithreaded model to solve real world problems

**CO4:** Build Java applications with I/O packages, string classes, Collections and generics concepts

**CO5:** Integrate the concepts of event handling and JavaFX components and controls for developing GUI based applications

**Text Books:**

Course Code	<b>EMPLOYABILITY ENHANCEMENT SKILLS - III: PROFESSIONAL COMMUNICATION AND TEAMWORK SKILLS</b>	L	T	P	C
ES3303		0	0	2	1

**COURSE OBJECTIVES:**

- To familiarize students with various forms of communication.
- To develop effective team communication skills.
- To enhance stakeholder communication skills.
- To cultivate ethical communication practices.
- To explore digital communication tools and trends.

**UNIT I**

Introduction to Communication - Verbal Communication Skills: - Written Communication Skills - Nonverbal Communication - Interpersonal Communication

**6**

**UNIT II**

Characteristics of Effective Teams - Team Building and Group Cohesion - Conflict Resolution - Decision Making in Teams - Cross-Cultural Communication

**6**

**UNIT III**

Stakeholder Communication - Presentation Skills - Effective Meetings - Feedback and

**6**

Evaluation

**UNIT IV** **6**  
 Professional Codes of Conduct - Integrity in Communication - Addressing Ethical Challenges - Analyzing real-world ethical communication dilemmas

**UNIT V** **6**  
 Digital Communication Tools - Social Media and Networking - Emerging Trends in Communication

**TOTAL : 30 PERIODS**

**Course Outcomes:**

**Upon Completion of the course the students will be able to**

**CO1:** Demonstrate proficiency in various forms of communication.

**CO2:** Exhibit strong team communication skills.

**CO3:** Display competence in stakeholder communication.

**CO4:** Apply ethical communication principles.

**CO5:** Utilize digital communication tools effectively.

**Text Books:**

**Semester IV**

Course Code	<b>ELECTROMAGNETIC FIELDS</b>	L	T	P	C
EC3401		3	0	0	3

**COURSE OBJECTIVES:**

- To impart knowledge on the basics of static electric field and the associated laws.
- To impart knowledge on the basics of static magnetic field and the associated laws.

- To give insight into coupling between electric and magnetic fields through Faraday's law, displacement current and Maxwell's equations.
- To gain the behaviour of the propagation of EM waves.
- To study the significance of Time varying fields.

**UNIT I INTRODUCTION 9**

Electromagnetic model, Units and constants, Review of vector algebra, Rectangular, cylindrical and spherical coordinate systems, Line, surface and volume integrals, Gradient of a scalar field, Divergence of a vector field, Divergence theorem, Curl of a vector field, Stoke's theorem, Null identities, Helmholtz's theorem, Verify theorems for different path, surface and volume.

**UNIT II ELECTROSTATICS 9**

Electric field, Coulomb's law, Gauss's law and applications, Electric potential, Conductors in static electric field, Dielectrics in static electric field, Electric flux density and dielectric constant, Boundary conditions, Electrostatics boundary value problems, Capacitance, Parallel, cylindrical and spherical capacitors, Electrostatic energy, Poisson's and Laplace's equations, Uniqueness of electrostatic solutions, Current density and Ohm's law, Electromotive force and Kirchhoff's voltage law, Equation of continuity and Kirchhoff's current law.

**UNIT III MAGNETOSTATICS 9**

Lorentz force equation, Ampere's law, Vector magnetic potential, Biot-Savart law and applications, Magnetic field intensity and idea of relative permeability, Calculation of magnetic field intensity for various current distributions Magnetic circuits, Behaviour of magnetic materials, Boundary conditions, Inductance and inductors, Magnetic energy, Magnetic forces and torques.

**UNIT IV TIME-VARYING FIELDS AND MAXWELL'S EQUATIONS 9**

Faraday's law, Displacement current and Maxwell-Ampere law, Maxwell's equations, Potential functions, Electromagnetic boundary conditions, Wave equations and solutions, Time-harmonic fields, Observing the Phenomenon of wave propagation with the aid of Maxwell's equations.

**UNIT V PLANE ELECTROMAGNETIC WAVES 9**

Plane waves in lossless media, Plane waves in lossy media (low-loss dielectrics and good conductors), reflection and refraction, polarization, phase and Group velocity, Electromagnetic power flow and Poynting vector, Normal incidence at a plane conducting boundary, Normal incidence at a plane dielectric boundary.

**TOTAL : 45 PERIODS**

**Course Outcomes:**

Upon Completion of the course the students will be able to

C01: Relate the fundamentals of vector, coordinate system to electromagnetic concepts.

C02: Analyze the characteristics of Electrostatic field.

C03: Interpret the concepts of Electric field in material space and solve the boundary conditions.

C04: Explain the concepts and characteristics of Magneto Static field in material space and solve boundary conditions.

C05: Determine the significance of time varying fields.

**Text Books:**

3. B.M.Notaros, Electromagnetics, Pearson: New Jersey, 2011

Course Code	<b>INFORMATION CODING TECHNIQUES</b>	L	T	P	C
AC3401		3	0	0	3

**COURSE OBJECTIVES:**

- To introduce students to fundamental concepts in Information Theory, Error Control Coding, Compression Techniques, Audio and Video Coding, and Cryptography.
- To familiarize students with coding algorithms, compression methods, audio/video encoding standards, and encryption techniques.
- To enable students to understand and apply these concepts in communication and data storage systems.
- To explore topics such as Huffman coding, Hamming codes, JPEG standards, MPEG audio/video coders, and RSA encryption.
- To equip students with the knowledge and skills necessary to analyze, design, and implement efficient and secure communication systems.

**UNIT I                      INFORMATION ENTROPY FUNDAMENTALS                      9**

Introduction to Information Theory: Modeling of information sources – source coding theorem – source coding algorithms – modeling of communication channels – channel capacity – bounds on communication. Uncertainty, Information and Entropy – Source coding Theorem – Huffman Coding – Shannon Fano coding . Discrete communication channels, Continuous channels. Discrete memory less Channels, Mutual information, Channel Capacity, Channel coding theorem, Differential entropy and mutual information for continuous ensembles, Channel capacity Theorem.

**UNIT II                      ERROR CONTROL CODING                      9**

Linear block codes: structure – matrix description – Hamming codes. Structure of cyclic codes – encoding and decoding of cyclic codes. Generator Polynomial – Parity check polynomial – Encoder for cyclic codes – calculation of syndrome – Convolutional codes. Binary Cycle Codes, Algebraic Structures of cyclic codes, Encoding using an (n-k) bit shift register, Syndrome calculation. BCH codes. RS codes, Golay codes, shortened cyclic codes, Burst error correcting codes. Burst and Random Error correcting codes. Convolution Codes, Time domain approach. Transform domain approach.

**UNIT III                      COMPRESSION TECHNIQUES                      9**

Principles – Text compression – Static Huffman Coding – Dynamic Huffman coding – Arithmetic coding – Image Compression – Graphics Interchange format – Tagged Image File Format – Digitized documents – Introduction to JPEG standards.

**UNIT IV                      AUDIO AND VIDEO CODING                      9**

Lossless predictive - Run-length - Ziv-Lempel coding - voice coding - modulation - linear predictive coding - silence coding and sub-band coding, Code excited LPC – Perceptual coding, MPEG audio coders – Dolby audio coders – Video compression – Principles – Introduction to

H.261 & MPEG Video standards.

**UNIT V CRYPTOGRAPHY 9**

Overview of encryption techniques - symmetric cryptography - Data Encryption Standard (DES) - International Data Encryption Algorithm (IDEA) - RC Ciphers - Public-key algorithm - RSA algorithm - Pretty Good Privacy - One-way Hashing

**TOTAL: 45 PERIODS**

**Course Outcomes:**

**Upon Completion of the course the students will be able to**

- CO1: Comprehensive understanding of coding, compression, and encryption techniques.
- CO2: Proficiency in applying these techniques to design communication systems.
- CO3: Problem-solving skills in addressing challenges related to information transmission and security.
- CO4: Critical evaluation of technique effectiveness in practical scenarios.
- CO5: Effective communication of complex concepts to diverse audiences.

**Text Books:**

- 1.K. Sam Shanmugam, “Digital and analog communication systems”, John Wiley.
- 2.Simon Haykin, “Digital communication”, John Wiley.
- 3.Ranjan Bose, “ITC and Cryptography” ,Tata McGraw Hill

**References:**

- 1.Mark Nelson, “Data Compression Book”, BPB Publication 1992.
- 2.Watkinson J, “Compression in Video and Audio”, Focal Press, London, 1995.
- 3.Steven Roman, “ Introduction to Coding and Information Theory”, Springer New York.

Course Code	<b>DIGITAL COMMUNICATION SYSTEMS</b>	L	T	P	C
AC3402		3	0	2	4

**COURSE OBJECTIVES:**

The course is aimed to

- Understand Waveform Coding, including prediction filtering and line codes.
- Study Digital Modulation techniques such as BPSK, BFSK, QPSK, and QAM.
- Explore Baseband Transmission principles like ISI and pulse shaping
- Understand the concept of spread spectrum Modulation.
- Understand the basics of OFDM as a multicarrier communication and CDMA as a multiuser communication technique.

**UNIT I WAVEFORM CODING & REPRESENTATION 9**

Prediction filtering and DPCM — Delta Modulation — ADPCM & ADM principles-Linear Predictive Coding- Properties of Line codes- Power Spectral Density of Unipolar / Polar RZ & NRZ — Bipolar NRZ — Manchester

**UNIT II DIGITAL MODULATION SCHEME 9**

Low pass representation of bandpass signals, Representation of digitally modulated Signals, Modulation Schemes without memory (Band Limited Schemes - PAM, BPSK, QPSK, MPSK, MQAM, Power Limited Schemes – FSK, MFSK, DPSK, DQPSK), modulation schemes with memory (Basics of CPFSK and CPM).

**UNIT III BASEBAND TRANSMISSION & RECEPTION 9**

ISI — Nyquist criterion for distortion less transmission — Pulse shaping — Correlative coding — Eye pattern — Receiving Filters- Matched Filter, Correlation receiver, Adaptive Equalization

3. H P Hsu, Schaum Outline Series - “Analog and Digital Communications”, TMH 2006

Course Code	<b>EMBEDDED PROGRAMMING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>EC3403</b>		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>

**COURSE OBJECTIVES:**

The course is aimed to

- To understand the concept of embedded system design and analysis.
- To learn the architecture of ARM processors.
- To evaluate the Programming of ARM processor
- To expose the basic concepts of embedded programming.
- To apply real time operating systems

**UNIT I INTRODUCTION TO EMBEDDED SYSTEM DESIGN 9**

Complex systems and microprocessors- Embedded system design process –Design example: Model train controller- Design methodologies- Design flows - Requirement Analysis – Specifications-System analysis and architecture design – Quality Assurance techniques - Designing with computing platforms – consumer electronics architecture – platform-level performance analysis

**UNIT II ARM PROCESSOR AND PERIPHERALS 9**

ARM level Architecture Versions – ARM Architecture – Instruction Set – Stacks and Subroutines – Features of the LPC214X Family – Peripherals – The Timer Unit – Pulse Width Modulation Unit – UART – Block Diagram of ARM9 and ARM Cortex M3 MCU.

**UNIT III EMBEDDED PROGRAMMING 9**

Components for embedded programs- Models of programs- Assembly, linking and loading – compilation techniques- Program performance analysis –Performance optimization- Program validation and testing.

ARM Peripherals programming in Embedded C-GPIO-Serial Communication-Timer-ADC

**UNIT IV REAL TIME SYSTEMS 9**

Structure of a Real Time System -- Estimating program run times – Task Assignment and Scheduling – Fault Tolerance Techniques – Reliability, Evaluation – Clock Synchronisation.

**UNIT V PROCESSES AND OPERATING SYSTEMS 9**

Introduction – Multiple tasks and multiple processes – Multirate systems- Preemptive real time operating systems- Priority based scheduling- Interprocess communication mechanisms – Evaluating operating system performance- power optimization strategies for processes – Example Real time operating systems-POSIX-Windows CE. - Distributed embedded systems – MPSoCs and shared memory multiprocessors. – Design Example - Audio player, Engine control unit – Video accelerator.

**TOTAL: 45 PERIODS**

**TOTAL: 30 PERIODS**

**LIST OF EXPERIMENTS:**

1. Study of ARM evaluation system
2. Interfacing ADC and DAC.
3. Interfacing LED and PWM.
4. Interfacing Real time clock and serial port.
5. Interfacing keyboard and LCD.
6. Interfacing EPROM and interrupt.
7. Mailbox.
8. Interrupt performance characteristics of ARM and FPGA.
9. Flashing of LEDs.
10. Interfacing stepper motor and temperature sensor.
11. Implementing zigbee protocol with ARM

**Course Outcomes:**

**Upon Completion of the course the students will be able to**

- CO1: Summarize Architecture and programming of ARM processors.  
 CO2: Applying the concepts of embedded systems and its features.  
 CO3: Analyze various Real Time Operating systems used in Embedded Systems.  
 CO4: Design the flow & Techniques to develop Software for embedded system networks.  
 CO5: Analyze Real-time applications using embedded System Products

**Text Books:**

1. Marilyn Wolf, “Computers as Components - Principles of Embedded Computing System Design”, Third Edition “Morgan Kaufmann Publisher (An imprint from Elsevier), 2012.
2. Jane W.S.Liu, || Real Time Systems||, Pearson Education, Third Indian Reprint, 2003.

**References:**

1. Lyla B.Das, Embedded Systems: An Integrated Approach, Pearson Education 2013.
2. Raj Kamal, Embedded system: Architecture Programming and Design, TMH Publication, Second Edition, 2008.

Course Code	<b>VLSI DESIGN</b>			
<b>EC3405</b>	L	T	P	C
	3	0	2	4

**COURSE OBJECTIVES:**

- To study the fundamentals of CMOS circuits and its characteristics.
- To learn the design and realization of combinational & sequential digital circuits.
- To analyse the performance involved in designing and realizing the circuits in CMOS technology
- To evaluate the different FPGA architectures and testability of VLSI circuits.
- To apply implementation the strategies and testing

**UNIT I INTRODUCTION TO MOS TRANSISTOR 9**

MOS Transistor, CMOS logic, Inverter, Pass Transistor, Transmission gate, Layout Design Rules, Gate layouts, Stick Diagrams, Long-Channel I-V Characteristics, C-V Characteristics, Non ideal I-V Effects, DC Transfer characteristics, RC Delay Model, Elmore Delay, Linear Delay Model, Logical effort, Parasitic Delay, Delay in Logic Gate, Scaling.

**UNIT II COMBINATIONAL MOS LOGIC CIRCUITS 9**

Circuit Families: Static CMOS, Ratioed Circuits, Cascode Voltage Switch Logic, Dynamic Circuits, Pass Transistor Logic, Transmission Gates, Domino, Dual Rail Domino, CPL, DCVSPG, DPL, Circuit Pitfalls. Power: Dynamic Power, Static Power, Low Power Architecture.

<b>UNIT III</b>	<b>SEQUENTIAL CIRCUIT DESIGN</b>	<b>9</b>
Static latches and Registers, Dynamic latches and Registers, Pulse Registers, Sense Amplifier Based Register, Pipelining, Schmitt Trigger, Monostable Sequential Circuits, Astable Sequential Circuits. Timing Issues: Timing Classification Of Digital System, Synchronous Design.		
<b>UNIT IV</b>	<b>DESIGN OF ARITHMETIC BUILDING BLOCKS &amp; SUBSYSTEM</b>	<b>9</b>
Arithmetic Building Blocks: Data Paths, Adders, Multipliers, Shifters, ALUs, power and speed tradeoffs, Case Study: Design as a tradeoff. Designing Memory and Array structures: Memory Architectures and Building Blocks, Memory Core, Memory Peripheral Circuitry.		
<b>UNIT V</b>	<b>IMPLEMENTATION STRATEGIES AND TESTING</b>	<b>9</b>
FPGA Building Block Architectures, FPGA Interconnect Routing Procedures. Design for Testability: Ad Hoc Testing, Scan Design, BIST, IDDQ Testing, Design for Manufacturability, Boundary Scan.		

**TOTAL: 45 PERIODS**

**PRACTICAL EXERCISES: 30 PERIODS**

1. Design an Adder (Min 8 Bit) using HDL. Simulate it using Xilinx/Altera Software and implement by Xilinx/Altera FPGA
2. Design a Multiplier (4 Bit Min) using HDL. Simulate it using Xilinx/Altera Software and implement by Xilinx/Altera FPGA
3. Design an ALU using HDL. Simulate it using Xilinx/Altera Software and implement by Xilinx/Altera FPGA
4. Design a Universal Shift Register using HDL. Simulate it using Xilinx/Altera Software and implement by Xilinx/Altera FPGA
5. Design Finite State Machine (Moore/Mealy) using HDL. Simulate it using Xilinx/Altera Software and implement by Xilinx/Altera FPGA
6. Design and Simulate a CMOS Inverting Amplifier.
7. Design and Simulate basic Common Source, Common Gate and Common Drain Amplifiers. Analyze the input impedance, output impedance, gain and bandwidth for experiments 10 and 11 by performing Schematic Simulations.
8. Design and simulate a simple 5 transistor differential amplifier. Analyze Gain, Bandwidth and CMRR by performing Schematic Simulations.

**Requirements: Cadence/Synopsys/ Mentor Graphics/Tanner/equivalent EDA Tools**

**Course Outcomes:**

- Upon Completion of the course the students will be able to
- CO1: Realize the concepts of digital building blocks using MOS transistor.
- CO2: Design combinational MOS circuits and power strategies.
- CO3: Design and construct Sequential Circuits and Timing Systems.
- CO4: Design arithmetic building blocks and memory subsystems.
- CO5: Apply and implement FPGA design flow and testing.

Course Code	<b>FUNDAMENTALS OF DATA SCIENCE AND MACHINE LEARNING</b>	L	T	P	C
<b>CS3403</b>		3	0	2	4

### **COURSE OBJECTIVES:**

The course is aimed to

- To understand the benefits, uses, and facts of Data Science.
- To master the Data Science process, from goal definition to data analysis and presentation.
- To perform and interpret correlation and regression analysis.
- To differentiate between learning algorithms and address overfitting, underfitting, and generalization.
- To build, train, and optimize neural networks, addressing deep learning challenges.

### **UNIT I INTRODUCTION TO DATA SCIENCE 9**

Data Science: Benefits and uses – facets of data - Data Science Process: Overview – Defining research goals – Retrieving data – Data preparation - Exploratory Data analysis – build the model– presenting findings and building applications - Data Mining - Data Warehousing – Basic Statistical descriptions of Data.

### **UNIT II DESCRIBING RELATIONSHIPS 9**

Correlation –Scatter plots –correlation coefficient for quantitative data –computational formula for correlation coefficient – Regression –regression line –least squares regression line – Standard error of estimate – interpretation of  $r^2$  –multiple regression equations –regression towards the mean

### **UNIT III MACHINE LEARNING BASICS 9**

Learning algorithms - supervised, unsupervised and reinforcement learning. Capacity, overfitting, underfitting and generalization - The no free lunch theorem - Bayesian decision theory, maximum likelihood estimation, maximum a posteriori estimation - Basic concepts of gradient descent optimization and Lagrange method.

### **UNIT IV ENSEMBLE TECHNIQUES AND UNSUPERVISED LEARNING 9**

Combining multiple learners: Model combination schemes, Voting, Ensemble Learning - bagging, boosting, stacking, Unsupervised learning: K-means, Instance Based Learning: KNN, Gaussian mixture models and Expectation maximization

### **UNIT V NEURAL NETWORKS 9**

Perceptron - Multilayer perceptron, activation functions, network training – gradient descent optimization – stochastic gradient descent, error backpropagation, from shallow networks to deep networks –Unit saturation (aka the vanishing gradient problem) – ReLU, hyperparameter tuning, batch normalization, regularization, dropout.

**TOTAL: 45 PERIODS**

## LIST OF LAB EXPERIMENTS

**TOTAL: 30 PERIODS**

1. Implement naïve Bayes models
2. Implement Bayesian Networks
3. Build Regression models
4. Build decision trees and random forests
5. Build SVM models
6. Implement ensembling techniques
7. Implement clustering algorithms
8. Implement EM for Bayesian networks
9. Build simple NN models
10. Build deep learning NN models

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### Course Outcomes:

**Upon Completion of the course the students will be able to**

**CO1:** Understand the benefits, uses, and different facets of Data Science.

**CO2:** Master the Data Science process, including goal definition, data analysis, and presentation.

**CO3:** Perform and interpret correlation and regression analyses.

**CO4:** Differentiate between various learning algorithms and address issues of overfitting, underfitting, and generalization.

**CO5:** Build, train, and optimize neural networks while addressing deep learning challenges

Course Code	<b>EMPLOYABILITY ENHANCEMENT SKILLS – IV: LEADERSHIP AND PROJECT MANAGEMENT SKILLS</b>	L	T	P	C
ES3404		0	0	2	1

**COURSE OBJECTIVES:**

- To understand leadership within the context of project management.
- To differentiate between leadership and management roles.
- To learn project initiation processes and setting SMART objectives.
- To build high-performing teams through motivation, empowerment, and effective communication.
- To develop skills in project planning, estimation, resource allocation, risk management, and scheduling

**UNIT I** 6  
 Understanding Leadership - Introduction to Project Management - Leadership vs. Management - Project Initiation - Setting SMART Objectives

**UNIT II** 6  
 Building High-Performing Teams - Motivation Theories - Empowering Team Members - Leadership Communication - Handling Team Conflicts

**UNIT III** 6  
 Work Breakdown Structure (WBS) - Estimation Techniques - Gantt Charts and Network Diagrams - Resource Allocation - Risk Management

**UNIT IV** 6  
 Leading Project Teams - Monitoring and Controlling Progress - Change Management - Quality Management - Stakeholder Communication

**UNIT V** 6  
 Project Closure Activities - Lessons Learned - Celebrating Success - Transition Planning

**TOTAL : 30 PERIODS**

**Course Outcomes:**

Upon Completion of the course the students will be able to

**CO1:** Apply leadership principles to project management scenarios.

**CO2:** Distinguish between leadership and management functions in project environments.

**CO3:** Initiate projects effectively by setting SMART objectives.

**CO4:** Foster high-performing teams through motivation, empowerment, and conflict resolution.

**CO5:** Proficiently plan, schedule, and manage project activities, resources, risks, and stakeholder communications.

**Text Books:**

**Course Outcomes:**

Upon Completion of the course the students will be able to

- CO1: Explain the characteristics of transmission lines and its losses.
- CO2: Calculate the standing wave ratio and input impedance in high frequency transmission lines.
- CO3: Analyze impedance matching by stubs using Smith Charts.
- CO4: Comprehend the characteristics of TE and TM waves.
- CO5: Design a RF transceiver system for wireless communication

**Text Books:**

Course Code	<b>CONTROL SYSTEMS</b>	L	T	P	C
<b>EC3502</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To introduce the components and their representation of control systems
- To learn various methods for analyzing the time response, frequency response and stability of the systems.
- To learn the various approach for the state variable analysis.
- To understand and analyse the concept of stability analysis
- To analyse the control system state variable methods

**UNIT I                    SYSTEMS COMPONENTS AND THEIR REPRESENTATION                    9**

Control System: Terminology and Basic Structure-Feed forward and Feedback control theory- Electrical and Mechanical Transfer Function Models-Block diagram Models-Signal flow graphs models-DC and AC servo Systems-Synchronous -Multivariable control system

**UNIT II                    TIME RESPONSE ANALYSIS                    9**

Transient response-steady state response-Measures of performance of the standard first order and second order system-effect on an additional zero and an additional pole-steady error constant and system- type number-PID control-Analytical design for PD, PI,PID control systems

**UNIT III                    FREQUENCY RESPONSE AND SYSTEM ANALYSIS                    9**

Closed loop frequency response-Performance specification in frequency domain-Frequency response of standard second order system- Bode Plot - Polar Plot- Nyquist plots-Design of compensators using Bode plots-Cascade lead compensation-Cascade lag compensation-Cascade lag-lead compensation

**UNIT IV                    CONCEPTS OF STABILITY ANALYSIS                    9**

Concept of stability-Bounded - Input Bounded - Output stability-Routh stability criterion-Relative stability-Root locus concept-Guidelines for sketching root locus-Nyquist stability criterion.

**UNIT V                    CONTROL SYSTEM ANALYSIS USING STATE VARIABLE METHODS                    9**

State variable representation-Conversion of state variable models to transfer functions- Conversion of transfer functions to state variable models-Solution of state equations-Concepts of Controllability and Observability-Stability of linear systems-Equivalence between transfer function and state variable representations-State variable analysis of digital control system-Digital control design using state feedback.

**TOTAL: 45 PERIODS**

**Course Outcomes:**

Upon Completion of the course the students will be able to

- CO1: Compute the transfer function of different physical systems.
- CO2: Analyse the time domain specification and calculate the steady state error.
- CO3: Illustrate the frequency response characteristics of open loop and closed loop system response.
- CO4: Analyse the stability using Routh and root locus techniques.
- CO5: Illustrate the state space model of a physical system and discuss the concepts of sampled data control system.

**Text Books:**

- 1 M.Gopal, "Control System – Principles and Design", Tata McGraw Hill, 4th Edition, 2012.

**References:**

- 1 J.Nagrath and M.Gopal, "Control System Engineering", New Age International Publishers, 5th Edition, 2007.
- 2 K.Ogata, "Modern Control Engineering", PHI, 5th Edition, 2012.
- 3 SK.Bhattacharya, "Control System Engineering", Pearson, 3rd Edition, 2013.
- 4 Benjamin.C.Kuo, "Automatic Control Systems", Prentice Hall of India, 7th Edition, 2015.

<b>Course Code</b>	<b>SIGNAL DETECTION AND ESTIMATION TECHNIQUES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AC3502</b>		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>

**COURSE OBJECTIVES:**

- To develop proficiency in vector space operations, including orthogonality, linear independence, and basis representation.
- To Master classical spectral estimation methods such as periodogram analysis and windowing techniques, as well as modern parametric methods like autoregressive modeling.
- To acquire the skills to design and implement signal detection algorithms based on the Neyman-Pearson criterion and matched filters.
- To understand the theoretical foundations of parameter estimation, including minimum variance unbiased estimation and the Cramer-Rao bound.
- To apply statistical inference techniques such as Bayesian estimation and sufficient statistics to optimize signal processing algorithms.

**UNIT I VECTOR SPACES AND SYMMETRIC MATRICES 9**

Vectors and matrices: notation and properties, orthogonality and linear independence, bases, distance properties, matrix operations, Eigen values and eigenvectors. Properties of Symmetric Matrices: Diagonalization of symmetric matrices, symmetric positive, definite and semi definite matrices, principal component analysis (PCA), singular value decomposition.

**UNIT II CLASSICAL (NON-PARAMETRIC) SPECTRAL ESTIMATION 9**

Properties of estimators, Finding good estimators, Estimation of spectrum from finite duration observations. Averaged periodogram, windowing of periodogram via FFT, Blackman-Tukey Spectral estimator, performance characteristics of non-parametric power spectrum estimators. Minimum variance spectral estimator, Neyman Pearson Criterion for detection, Bay's estimator.

**UNIT III MODERN (PARAMETRIC) SPECTRAL ESTIMATION 9**

Time series models, relationship between auto-correlation and the model parameters, AR Parameters by Yule-walker, Burg and Sequential estimation methods, selection of AR model

order, MA and ARMA models for power spectrum estimator, Maximum entropy spectral estimator, Minimum variance spectral estimator

**UNIT IV DETECTION AND ESTIMATION OF SIGNALS IN NOISE 9**

Minimum probability of Error criterion, Neyman-Pearson criterion for Radar detection of constant and variable, amplitude signals, Matched Filters, optimum formulation, detection of random signals, Linear mean squared estimation, non-linear estimates, MAP and ML estimates, maximum likelihood estimate of parameters of linear system

**UNIT V ESTIMATION OF SIGNAL PARAMETERS 9**

Minimum variance unbiased estimation, Fisher information matrix, Cramer-Rao bound, sufficient statistics, minimum statistics, complete statistics; linear models; best linear unbiased estimation; maximum likelihood estimation, invariance principle; estimation efficiency; Bayesian estimation: philosophy, nuisance parameters, risk functions, minimum mean square error estimation, maximum a posteriori estimation.

**TOTAL: 45 PERIODS**

**TOTAL: 30 PERIODS**

**PRACTICALS:**

1. Simulate signal and noise models models.
2. Simulate spatially separated target Signal in the presence of Additive Correlated White Noise
3. Simulate spatially separated target Signal in the presence of Additive Uncorrelated White Noise
4. Simulate spatially separated target Signal in the presence of Additive Correlated Colored Noise
5. Detect Constant amplitude Signal in AWGN
6. Detect Time varying Known Signals in AWGN
7. Detect Unknown Signals in AWGN
8. Compare performance comparison of the Estimation techniques - MLE, MMSE, Bayes Estimator, MAP Estimator, Expectation Maximization (EM) algorithm
9. Performance comparison of conventional Energy Detectors and Coherent Matched Filter Techniques

**Course Outcomes:**

Upon Completion of the course the students will be able to

- CO1: Grasp fundamental concepts in vector spaces.
- CO2: Develop practical skills in spectral estimation.
- CO3: Analyze signals effectively in noisy environments.
- CO4: Understand basic principles of parameter estimation.
- CO5: Apply statistical techniques to analyze data.

## SEMESTER VI

Course Code	<b>RADAR AND NAVIGATION TECHNIQUES</b>	L	T	P	C
<b>AC3601</b>		3	0	0	3

**COURSE OBJECTIVES:**

- Understand the basics of Radar and Radar equation
- Understand the types of Radar
- Understand tracking Radar
- Understand the various signal processing in Radar
- Understand the Subsystems in Radar

**UNIT I INTRODUCTION TO RADAR EQUATION 9**

The Origins of Radar, Radar principles, Basic Block Diagram, Radar classifications based on Frequencies, Wave form and application, Radar Fundamentals: Detection, Range, velocity, The simple form of the Radar Equation, Pulsed Radar equation, Detection of Signals in Noise- Receiver Noise, Signal-to-Noise Ratio, Probabilities of Detection and False Alarm, Integration of Radar Pulses, Radar Cross Section of Targets, Transmitter Power, Pulse Repetition Frequency, Antenna Parameters, System losses.

**UNIT II CW, MTI AND PULSE DOPPLER RADAR 9**

CW and Frequency Modulated Radar, Doppler and MTI Radar- Delay Line Cancellers, Staggered Pulse Repetition Frequencies, Doppler Filter Banks, Digital MTI Processing, Moving Target Detector, Limitations to MTI Performance, MTI from a Moving Platform (AMIT), Pulse Doppler Radar.

**UNIT III TRACKING RADAR 9**

Tracking with Radar, Monopulse Tracking, Conical Scan, Sequential Lobing, Limitations to Tracking Accuracy, Low-Angle Tracking - Comparison of Trackers, Track while Scan (TWS) Radar- Target prediction , state estimation, Measurement models, alpha - beta tracker, Kalman Filtering, Extended Kalman filtering.

**UNIT IV RADAR SIGNAL PROCESSING 9**

Radar Signal Processing Fundamentals, Detection strategies, Optimal detection, Threshold detection, Constant False alarm rate detectors, Adaptive CFAR, pulse compression waveforms, compression gain, LFM waveforms matched filtering, radar ambiguity functions, radar resolution, Detection of radar signals in Noise and clutter, detection of non fluctuating target in noise, Doppler spectrum of fluctuating targets, Range Doppler spectrum of stationary and moving radar.

**UNIT V RADAR TRANSMITTERS AND RECEIVERS 9**

Radar Transmitter, Linear Beam Power Tubes, Solid State RF Power Sources, Magnetron, Crossed Field Amplifiers, Other RF Power Sources. The Radar Receiver ,Receiver noise power, Super heterodyne Receiver, Duplexers and Receiver Protectors- Radar Displays. Radar Antenna - Reflector Antennas - Electronically Steered Phased Array Antennas – Phase Shifters

**TOTAL: 45 PERIODS**

**TOTAL: 30 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Course Outcomes:**

Upon Completion of the course the students will be able to

- CO1: Identify the Radar parameters
- CO2: Differentiate various radar types
- CO3: Evaluate different tracking and filtering schemes
- CO4: Apply signal processing in target detection
- CO5: Design Radar transmitter and receiver blocks

**Text Books:**

1. Habibur Rahman, Fundamental Principles of Radar, CRC press, Taylor and Francis, 2019.
2. M. R. Richards, J. A. Scheer, W. A. Holm, Editors “Principles of Modern Radar, Basic Principles”, SciTech Publishing, 2012

**References:**

1. Nathansan, “Radar design principles-Signal processing and environment”, PHI, 2nd Edition, 2007.
2. M.I.Skolnik, “Introduction to Radar Systems”, Tata McGraw Hill 2006.
3. Mark A. Richards, “Fundamentals of Radar Signal Processing”, McGraw-Hill, 2005.

Course Code	<b>WIRELESS COMMUNICATION</b>	L	T	P	C
<b>AC3602</b>		3	0	2	4

**COURSE OBJECTIVES:**

- To study and understand the concepts and design of a Cellular System.
- To Study and Understand Mobile Radio Propagation and Various Digital Modulation Techniques.
- To Understand the Concepts of Multiple Access Techniques and Wireless Networks

**UNIT I THE CELLULAR CONCEPT-SYSTEM DESIGN FUNDAMENTALS 9**

Introduction-Frequency Reuse-Channel Assignment Strategies-Handoff Strategies: Prioritizing Handoffs, Practical Handoff Considerations. Interference And System Capacity: Co-Channel Interference and System Capacity-Channel Planning for Wireless Systems, Adjacent Channel Interference, Power Control for Reducing Interference, Trunking and Grade Of Service. Improving Coverage and Capacity in Cellular Systems: Cell Splitting, Sectoring.

**UNIT II MOBILE RADIO PROPAGATION 9**

Large Scale Path Loss: Introduction to Radio Wave Propagation - Free Space Propagation Model - Three Basic Propagation Mechanism: Reflection - Brewster Angle- Diffraction- Scattering. Small Scale Fading and Multipath: Small Scale Multipath Propagation, Factors Influencing Small-Scale Fading, Doppler Shift, Coherence Bandwidth, Doppler Spread And Coherence Time. Types Of Small- Scale Fading: Fading Effects Due to Multipath Time Delay Spread, Fading Effects Due to Doppler Spread.

**UNIT III MODULATION TECHNIQUES AND EQUALIZATION AND DIVERSITY 9**

Digital Modulation - An Overview: Factors That Influence The Choice Of Digital Modulation, Linear Modulation Techniques: Minimum Shift Keying (MSK), Gaussian Minimum Shift Keying(GMSK), Spread Spectrum Modulation Techniques: Pseudo- Noise (PN) Sequences, Direct Sequence Spread Spectrum (DS-SS)- Modulation Performance In Fading And Multipath

Channels- Equalization, Diversity And Channel Coding: Introduction-Fundamentals Of Equalization- Diversity Techniques: Practical Space Diversity Considerations, Polarization Diversity, Frequency Diversity, Time Diversity.

**UNIT IV** **MULTIPLE ACCESS TECHNIQUES** **9**

Introduction: Introduction To Multiple Access- Frequency Division Multiple Access (FDMA)- Time Division Multiple Access (TDMA)- Spread Spectrum Multiple Access-Code Division Multiple Access(CDMA)- Space Division Multiple Access(SDMA)- Capacity Of Cellular Systems: Capacity Of Cellular CDMA, Capacity Of CDMA With Multiple Cells.

**UNIT V** **WIRELESS NETWORKING** **9**

Introduction: Difference Between Wireless And Fixed Telephone Networks, The Public Switched Telephone Network(PSTN), Development Of Wireless Networks: First Generation Wireless Networks, Second Generation Wireless Networks, Third Generation Wireless Networks, Fixed Network Transmission Hierarchy, Traffic Routing In Wireless Networks: Circuit Switching, Packet Switching- Personal Communication Services/ Networks(PCS/PCNs): Packet Vs Circuit Switching For PCN, Cellular Packet- Switched Architecture- Packet Reservation Multiple Access(PRMA)- Network Databases: Distributed Database For Mobility Management- Universal Mobile Telecommunication Systems(UMTS).

**TOTAL: 45 PERIODS**

**PRACTICAL EXERCISES:** **30 PERIODS**

1. Modeling of wireless communication systems using MATLAB (Two ray channel and Okumura –Hata model)
2. Modeling and simulation of Multipath fading channel
3. Design, analyze and test Wireless standards and evaluate the performance measurements such as BER, PER, BLER, throughput, capacity, ACLR, EVM for 4G and 5G using MATLAB
4. Modulation: Spread Spectrum – DSSS Modulation & Demodulation
5. Wireless Channel equalization: Zero-Forcing Equalizer (ZFE), MMSE, Adaptive Equalizer (ADE), Decision Feedback Equalizer (DFE)
6. Modeling and simulation of TDMA, FDMA and CDMA for wireless communication

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Course Outcomes:**

- Upon Completion of the course the students will be able to
- C01: Understand the Concept and Design of a Cellular System.
  - C02: Understand Mobile Radio Propagation and Various Digital Modulation Techniques.
  - C03: Understand the Concepts of Multiple Access Techniques And Wireless Networks
  - C04: Characterize a wireless channel and evolve the system design specifications
  - C05: Design a cellular system based on resource availability and traffic demands.

**Text Books:**

1. Rappaport, T.S., -Wireless communications”, Pearson Education, Second Edition, 2010.

**References:**

<b>Course Code</b>	<b>RF AND MICROWAVE ENGINEERING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AC3603</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

### **COURSE OBJECTIVES:**

- Understand the parameters and interconnections of two-port networks, including low and high frequency parameters.
- Analyze RF amplifiers, covering characteristics, stability, noise figure, and various amplifier types.
- Learn impedance matching techniques using discrete components and microstrip lines.
- Explore passive and active microwave devices such as attenuators, couplers, diode detectors, and oscillators.
- Study microwave generation methods including conventional vacuum tubes, Klystron amplifiers, and magnetron oscillators, and gain proficiency in microwave measurements using instruments like spectrum analyzers and network analyzers.

### **UNIT I TWO PORT NETWORK THEORY 9**

Review of Low frequency parameters: Impedance, Admittance, Hybrid and ABCD parameters, Different types of interconnection of Two port networks, High Frequency parameters, Formulation of S parameters, Properties of S parameters, Reciprocal and lossless Network, Transmission matrix, RF behavior of Resistors, Capacitors and Inductors

### **UNIT II RF AMPLIFIERS AND MATCHING NETWORKS 9**

Characteristics of Amplifiers, Amplifier power relations, Stability considerations, Stabilization Methods, Noise Figure, Constant VSWR, Broadband, High power and Multistage Amplifiers, Impedance matching using discrete components, Two component matching Networks, Frequency response and quality factor, T and Pi Matching Networks, Microstrip Line Matching Networks.

### **UNIT III PASSIVE AND ACTIVE MICROWAVE DEVICES 9**

Terminations, Attenuators, Phase shifters, Directional couplers, Hybrid Junctions, Power dividers, Circulator, Isolator, Impedance matching devices: Tuning screw, Stub and quarter wave transformers. Crystal and Schottky diode detector and mixers, PIN diode switch, Gunn diode oscillator, IMPATT diode oscillator and amplifier, Varactor diode, Introduction to MIC.

### **UNIT IV MICROWAVE GENERATION 9**

Review of conventional vacuum Triodes, Tetrodes and Pentodes, High frequency effects in vacuum Tubes, Theory and application of two cavity Klystron Amplifier, Reflex Klystron oscillator, Traveling wave tube amplifier, and Magnetron oscillator using Cylindrical, Linear, Coaxial Voltage tunable Magnetrons, Backward wave Crossed field amplifier and oscillator.

### **UNIT V MICROWAVE MEASUREMENTS 9**

Measuring Instruments : Principle of operation and application of VSWR meter, Power meter, Spectrum analyzer, Network analyzer, Measurement of Impedance, Frequency, Power, VSWR, Qfactor, Dielectric constant, Scattering coefficients, Attenuation, S-parameters.

**TOTAL: 45 PERIODS**

**PRACTICALS**

**TOTAL: 30 PERIODS**

1. Reflex klystron or Gunn diode characteristics and basic microwave parameter measurement such as VSWR, frequency, wavelength.
2. Directional Coupler Characteristics.
3. Radiation Pattern of Horn Antenna.
4. S-parameter Measurement of the following microwave components (Isolator, Circulator, E plane Tee, H Plane Tee, Magic Tee)
5. Attenuation and Power Measurement

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Course Outcomes:**

Upon Completion of the course the students will be able to

1. Explain different types of waveguides and their respective modes of propagation.
2. Analyze typical microwave networks using impedance, admittance, transmission and scattering matrix representations.
3. Design microwave matching networks using L section, single and double stub and quarter wave transformer.
4. Explain working of microwave passive circuits such as isolator, circulator, Directional couplers, attenuators etc.
5. Describe and explain working of microwave tubes and solid state devices

**Text Books:**

<b>Course Code</b>	<b>COMMUNICATION NETWORKS AND SECURITY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>EC4604</b>		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>

**COURSE OBJECTIVES:**

- To learn the Network Models and datalink layer functions.
- To understand routing in the Network Layer
- To explore methods of communication and congestion control by the Transport Layer.
- To study the Network Security Mechanisms.
- To learn various hardware security attacks and their countermeasures.

**UNIT I**

**NETWORK MODELS AND DATALINK LAYER**

**9**

Overview of Networks and its Attributes – Network Models – OSI, TCP/IP, Addressing – Introduction to Datalink Layer – Error Detection and Correction – Ethernet(802.3)- Wireless LAN – IEEE 802.11, Bluetooth – Flow and Error Control Protocols – HDLC – PPP.

<b>UNIT II</b>	<b>NETWORK LAYER PROTOCOLS</b>	<b>9</b>
Network Layer – IPv4 Addressing – Network Layer Protocols (IP, ICMP and Mobile IP) Unicast and Multicast Routing – Intradomain and Interdomain Routing Protocols – IPv6 Addresses – IPv6 – Datagram Format - Transition from IPv4 to IPv6.		
<b>UNIT III</b>	<b>TRANSPORT AND APPLICATION LAYERS</b>	<b>9</b>
Transport Layer Protocols – UDP and TCP Connection and State Transition Diagram - Congestion Control and Avoidance(DEC bit, RED)- QoS - Application Layer Paradigms – Client – Server Programming – Domain Name System – World Wide Web, HTTP, Electronic Mail		
<b>UNIT IV</b>	<b>NETWORK SECURITY</b>	<b>9</b>
OSI Security Architecture – Attacks – Security Services and Mechanisms – Encryption – Advanced Encryption Standard – Public Key Cryptosystems – RSA Algorithm – Hash Functions – Secure Hash Algorithm – Digital Signature Algorithm		
<b>UNIT V</b>	<b>HARDWARE SECURITY</b>	<b>9</b>
Introduction to hardware security, Hardware Trojans, Side – Channel Attacks – Physical Attacks and Countermeasures – Design for Security. Introduction to Block chain Technology.		

**TOTAL : 45 PERIODS**

**PRACTICAL EXERCISES:**

**30 PERIODS**

1. Implementation of Error Detection / Error Correction
2. Implementation of Stop and Wait Protocol and sliding window
3. Implementation and study of Goback-N and selective repeat protocols
4. Implementation of High Level Data Link Control
5. Implementation of IP Commands such as ping, Traceroute, nslookup.
6. Implementation of IP address configuration.
7. To create scenario and study the performance of network with CSMA / CA protocol and compare with CSMA/CD protocols
8. Network Topology - Star, Bus, Ring
9. Implementation of Encryption and Decryption Algorithms using any programming language
10. Implementation of distance vector routing algorithm and Link state routing algorithm

**Course Outcomes:**

Upon Completion of the course the students will be able to

- CO1: Explain the Network Models, layers and functions.
- CO2: Categorize and classify the routing protocols.
- CO3: List the functions of the transport and application layer.
- CO4: Evaluate and choose the network security mechanisms.
- CO5: Discuss the hardware security attacks and countermeasures

**Text Books:**

1. Behrouz A. Forouzan, “Data communication and Networking”, Fifth Edition, Tata McGraw – Hill, 2013
2. William Stallings, Cryptography and Network Security, Seventh Edition, Pearson Education, 2017(Unit- IV)

3. Ying-Dar Lin, Ren-Hung Hwang, Fred Baker, “Computer Networks: An Open Source Approach”, Mc Graw Hill Publisher, 2021.
4. Larry L. Peterson, Bruce S. Davie, “Computer Networks: A Systems Approach”, Fifth Edition, Morgan Kaufmann Publishers, 2022.

**SEMESTER VII**

<b>Course Code</b>	<b>SOFTWARE DEFINED RADIO</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AC3701</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

- Understand the fundamentals of software radio, including its necessity, characteristics, and benefits.
- Explore RF implementation in software radios, covering receiver and transmitter architectures and direct digital synthesis.
- Learn about digital signal generation methods, focusing on direct digital synthesis and its applications.
- Gain insight into cognitive radio concepts and the integration of cognitive functions into software-defined radio architectures.
- Familiarize with hardware and software components used in software-defined radios through case studies.

<b>UNIT I</b>	<b>INTRODUCTION TO SOFTWARE RADIO</b>	<b>9</b>
The Need for Software Radios. Characteristics and Benefits of a Software Radio. Design Principles of a Software Radio, Essential functions of the software radio, basic SDR, hardware architecture, Computational processing resources, software architecture, top level component interfaces, interface topologies among plug and play modules.		
<b>UNIT I</b>	<b>RF IMPLEMENTATION</b>	<b>9</b>
Purpose of RF front – end, Dynamic range, RF receiver front – end topologies, Enhanced flexibility of the RF chain with software radios, Importance of the components to overall performance, Transmitter architectures and their issues, Noise and distortion in the RF chain, Hybrid DDS – PLL systems, Applications of Direct Digital Synthesis.		
<b>UNIT III</b>	<b>DIGITAL GENERATION OF SIGNALS</b>	<b>9</b>
Comparison of direct digital synthesis with analog signal synthesis, Approaches to direct digital synthesis, Analysis of spurious signals, Performance of direct digital synthesis systems, Applications of direct digital synthesis.		
<b>UNIT IV</b>	<b>COGNITIVE RADIO ON SDR</b>	<b>9</b>
Cognitive Radio - functions, components and design rules, Cognition cycle - orient, plan, decide and act phases, Inference Hierarchy, Architecture maps, Building the Cognitive Radio Architecture on Software defined Radio Architecture.		
<b>UNIT V</b>	<b>HARDWARE AND SOFTWARE FOR SDR &amp; CASE STUDIES</b>	<b>9</b>
DSP Processors, FPGA, ASICs. Trade-offs, Object oriented programming, Object Brokers, GNU Radio-USRP. Case Studies: SPEAK easy, JRTS, SDR-3000.		

**TOTAL : 45 PERIODS**

**Course Outcomes:**

Upon Completion of the course the students will be able to

CO1: Acquire Knowledge about various architectures and device technologies of PLD's.

CO2: Comprehend FPGA Architectures.

CO3: Impart the idea of Advanced FPGA's.

CO4: Describe FSM and different FSM techniques like petrinets & different case studies.

CO5: Analyze System level Design and their application for Combinational and Sequential Circuits.

**Text Books:**

2. Tony J Roupahel, "RF and DSP for SDR," Elsevier Newnes Press, 2008.

**References:**

1. P. Kenington, "RF and Baseband Techniques for Software Defined Radio," Artech House, 2005.

2. Paul Burns, "Software Defined Radio for 3G," Artech House, 2002.

3. Behrouz. F. Bourjney "Signal Processing for Software defined Radios", Lulu 2008.

Course Code	<b>BUSINESS MANAGEMENT</b>	L	T	P	C
HS3701		3	0	0	3

**COURSE OBJECTIVES:**

- To Sketch the Evolution of Management.
- To Study the various HR related activities.
- To Analyze the position of self and company goals towards business.
- To enable the students to create an awareness on Engineering Ethics and Human Values.
- To instill Moral and Social Values and Loyalty and to appreciate the rights of others.

**UNIT I INTRODUCTION TO MANAGEMENT AND ORGANIZATION 9**

Definition of Management- Manager Vs Entrepreneur- Types of managers - Managerial roles and skills - Evolution of Management- Types of Business organization- Sole proprietorship, partnership, company-public and private sector enterprises- Organization culture and Environment - Current trends and issues in Management.

**UNIT II PLANNING AND ORGANISING 9**

Planning : Nature and purpose of planning - Planning process - Types of planning - Strategic Management - Planning Tools and Techniques - Decision making steps and process Organising : Nature and purpose - Formal and informal organization - Organization chart - Organization structure - Types - Line and staff authority - Departmentalization - delegation of authority - Centralization and decentralization -Human Resource Management.

**UNIT III DIRECTING AND CONTROLLING 9**

Directing : Foundations of individual and group behaviour- Motivation - Motivation theories- Job satisfaction - Job enrichment - Leadership - types and theories of leadership - Communication - Process of communication.

Controlling : System and process of controlling - Budgetary and non - Budgetary control techniques - Use of computers and IT in Management control -Control and performance - Direct and preventive control - Reporting.

**UNIT IV HUMAN VALUES AND ENGINEERING ETHICS 9**

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence– Introduction to Yoga and meditation for professional excellence and stress management. Senses of \_Engineering Ethics – Variety of moral issues – Types of inquiry – Moral dilemmas –Kohlberg’s theory – Gilligan’s theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

**UNIT V GLOBAL ISSUES 9**

Professional Rights – Employee Rights – Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership –Code of Conduct – Corporate Social Responsibility.

**TOTAL : 45 PERIODS**

**Course Outcomes:**

**Upon Completion of the course the students will be able to**

- CO1:** Understanding of managerial functions like planning, organizing, staffing, leading & controlling.
- CO2:** Understand management concept of Planning and organizing.
- CO3:** Understand management concept of Directing and Controlling.
- CO4:** Describe the human values with regard to the individual lifestyle for the society and Explain the role of ethics to the engineering field.
- CO5:** Discuss the global issues of professional ethics in engineering and Experiment the professional ethics in engineering-based product development

**Text Books:**

1. Govindarajan M, Natarajan S, Senthil Kumar V. S, –Engineering Ethics||, Prentice Hall of India, New Delhi, 2004.

## APPENDIX A: PROFESSIONAL ELECTIVES

<b>Vertical 1 Semiconductor Chip Design</b>	<b>Vertical 2 Signal Processing</b>	<b>Vertical 3 Embedded Systems and IoT</b>
Hardware Modelling using VHDL	Adaptive Signal Processing	Real Time Operating Systems
ASIC Design	Speech Signal Processing	IoT And Industry 4.0
Testing of VLSI Circuits	Radar Signal Processing	Communication Protocol and Standards
Mixed Signal Design	AR/VR	ARM Architecture and Programming
Analog IC Design	DSP Architectures	Edge Analytics
Low Power VLSI Design	Brain Computer Interface and Applications	Smart System Automation

<b>Vertical 5 Artificial Intelligence and Data Science</b>	<b>Vertical 4 Communication Systems</b>	<b>Vertical 6 Deep Tech</b>
Data Analytics and Visualization	Optical Communication and Networks	Massive MIMO Networks
Deep Learning	Ad-Hoc and Wireless Sensor Networks	Ultra Wideband Communications
Natural Language Processing	5G Technologies	Quantum Computing and Applications
Reinforcement Learning	Advanced 5G Techniques	High Performance Computing
Big Data Analytics	Underwater Communication	Millimeter Wave Communication
Generative Artificial Intelligence	Advanced Wireless Communication Techniques	High Speed Switching and Networking

**Course Outcomes:**

**Upon Completion of the course the students will be able to**

CO1: Understand the basics of Hardware Description Languages, Program structure and basic language elements of VHDL

CO2: Understand various statements and delay models of behavior modelling Using VHDL

CO3: Understand the gate level and structural level modelling using VHDL

CO4: Understand an advanced technique in VHDL

CO5: summarize various optimization methods, circuit design of Datapath and memory system

**Text Books:**

1. J.Bhaskar- VHDL Primer, Pearson Education Asia, 2001.
2. Digital System Design Using VHDL, by C.H. Roth and L.K. John, Thomson, Second Edition, ISBN 0-534-38462-5.

**References:**

<b>Course Code</b>	<b>ASIC DESIGN</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AC3V12</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES:**

The course is aimed to

- To understand different types of ASICs and their design flow.
- To explore programmable ASIC technologies and architectures.
- To analyze advanced FPGA architectures and embedded systems.
- To learn logic synthesis, placement, and routing techniques.
- To implement high-performance algorithms in ASIC and SoC designs.

**UNIT I INTRODUCTION TO ASICs 9**

Types of ASICs - Design flow - CMOS transistors - Combinational Logic Cell – Sequential logic cell - Data path logic cell - Transistors as Resistors - Transistor Parasitic Capacitance- Logical effort.

**UNIT II PROGRAMMABLE ASICs, LOGIC CELLS AND I/O CELLS 9**

Anti fuse - static RAM - EPROM and EEPROM technology - Actel ACT - Xilinx LCA –Altera FLEX - Altera MAX DC & AC inputs and outputs - Clock & Power inputs - Xilinx I/O blocks.

**UNIT III PROGRAMMABLE ASIC ARCHITECTURE 9**

Architecture and configuration of Spartan / Cyclone and Virtex / Stratix FPGAs – Micro-Blaze / Nios based embedded systems – Signal probing techniques

**UNIT IV LOGIC SYNTHESIS, PLACEMENT AND ROUTING 9**

Logic synthesis - ASIC floor planning- placement and routing – power and clocking strategies.

**UNIT V HIGH PERFORMANCE ALGORITHMS FOR ASICs/ SOCs 9**

DAA and computation of FFT and DCT. High performance filters using delta-sigma modulators. Case Studies: Digital camera, SDRAM, High speed data standards.

**TOTAL: 45 PERIODS**

**Course Outcomes:**

**Upon Completion of the course the students will be able to**

- CO1: Identify and classify various types of ASICs.
- CO2: Utilize programmable ASIC technologies in custom designs.
- CO3: Configure and utilize advanced FPGA architectures.
- CO4: Execute logic synthesis and optimize power and clock distribution.
- CO5: Apply high-performance algorithms in ASIC and SoC designs.

Course Code	<b>TESTING OF VLSI CIRCUITS</b>	L	T	P	C
<b>AC4V13</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To understand the level in the domain of VLSI Design and Test.
- To learn the concept of VLSI Testing and analyze the potential of ATPG algorithms.
- To understand the challenges involved in scan design and test.
- To design for testability and explore the built-in-test concepts.
- To introduce Boundary scan configuration with TAP controller

**UNIT I INTRODUCTION TO TESTING 9**

Role of testing VLSI circuits, VLSI trends affecting testing, Physical Faults, Stuck-at Faults, Stuck open Faults, Permanent, Intermittent and Pattern Sensitive Faults, Delay Faults. Fault Modeling - Functional Testing, Structural Testing, Types of Fault Models, Stuck-at Faults, Bridging Faults, cross point faults, Fault Equivalence, Fault Dominance

**UNIT II TEST GENERATION FOR COMBINATIONAL CIRCUIT 9**

Controllability, Observability, Test generation algorithms, Path Sensitization Methods, Roth’s D-Algorithm, Boolean Difference, PODEM Algorithm

**UNIT III TEST GENERATION FOR SEQUENTIAL CIRCUITS 9**  
 Test generation based on circuit structure, Ad-hoc, Structured DFT- Scan method, Scan Design Rules, Overheads of Scan Design, partial scan methods, multiple chain scan methods

**UNIT IV BUILT IN SELF TEST 9**  
 Built-In self-Test, test pattern generation for BIST, Pseudo-Random Pattern Generation, response compaction - Parity checking, Ones counting, Transition Count, Signature analyzer, Circular BIST, BIST Architectures

**UNIT V BOUNDARY SCAN STANDARD 9**  
 Motivation, System Configuration with Boundary Scan: TAP Controller and Port, Boundary Scan Test, Instructions, Pin Constraints of the Standard, Boundary Scan Description Language: BSDL Description Components, Pin Descriptions.

**TOTAL: 45 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Course Outcomes:**

- Upon Completion of the course the students will be able to  
 CO1: Improves the knowledge level in the domain of VLSI Design and Test.  
 CO2: Enhances the creativity to develop new ATPG Algorithms.  
 CO3: Evaluate the significance of sequential test pattern generation.  
 CO4: Analyze the challenges involved in BIST.  
 CO5: Summarize the significance of Boundary Scan.

3. Zainalabe Navabi, "Digital System Test and Testable Design: Using HDL Models and Architectures", Springer, 2020.

Course Code	<b>MIXED SIGNAL IC DESIGN</b>	L	T	P	C
<b>AC3V14</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To learn the principles and advanced systems of signal sampling.
- To understand sampling circuit design and sources of distortion.
- To study SC circuits and their non-idealities.
- To explore various ADC designs and key components.
- To learn about different DAC designs and their properties.

**UNIT I** **SAMPLING** 9  
Introduction – sampling - Spectral properties of sampled signals - Oversampling – Anti-alias filter design. Time Interleaved Sampling - Ping-pong Sampling System - Analysis of offset and gain errors in Time Interleaved Sample and Hold.

**UNIT II** **SAMPLING CIRCUITS** 9  
Sampling circuits- Distortion due to switch - Charge injection - Thermal noise in sample and holds - Bottom plate sampling - Gate bootstrapped switch - Nakagome charge pump. Characterizing Sample and hold - Choice of input frequency.

**UNIT III** **SWITCHED CAPACITOR CIRCUITS** 9  
Switched Capacitor (SC) circuits– Parasitic Insensitive Switched Capacitor amplifiers - Non idealities in SC Amplifiers – Finite gain - DC offset - Gain Bandwidth Product. Fully differential SC circuits - DC negative feedback in SC circuits.

**UNIT IV** **ANALOG TO DIGITAL CONVERTER ARCHITECTURES** 9  
Flash ADC - Regenerative latch - Preamp offset correction - Preamp Design - necessity of upfront sample and hold for good dynamic performance. Folding ADC - Multiple-Bit Pipeline ADCs and SAR ADC.

**UNIT V** **DIGITAL TO ANALOG CONVERTER ARCHITECTURES** 9  
DAC spectra and pulse shapes - NRZ vs RZ DACs. DAC Architectures: Binary weighted - Thermometer DAC - Current steering DAC - Current cell design in current steering DAC – Charge. Scaling DAC - Pipeline DAC.

**TOTAL : 45 PERIODS**

**PRACTICAL EXERCISES:**

**TOTAL: 30 PERIODS**

**(Design with Schematic, Simulation, Layout, DRC, LVS)**

1. Design the following analog circuits with the given specifications
  - a) Differential amplifier
  - b) Single stage op-amp
  - c) Two stage op-amp
 Design a 4 bit R-2R based DAC for the given specification.
2. For the SAR based ADC, draw the mixed signal schematic and verify the functionality by completing ASIC Design flow.
3. Design a Phase Locked Loop for the given specification.
4. Design and test Voltage Controlled Oscillator for a given specification

**Course Outcomes:**

Upon Completion of the course the students will be able to

CO1: Understand the theory of discrete-time signal processing and its implementation using analog techniques.

CO2: Realize Sample and Hold Circuits using MOS by considering the non-idealities.

CO3: Analyze CMOS based Switched Capacitor Circuits.

CO4: Analyze the architectures of ADCs and DAC.

CO5: Understand the oversampling converter architecture.

**Text Books:**

1. Frank Ohnhaus, Analog-Digital Converters for Industrial Applications Including an Introduction to Digital-Analog Converters Springer Publishers, First Edition, 2015.

<b>Course Code</b>	<b>ANALOG IC DESIGN</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AC3V15</b>		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**COURSE OBJECTIVES:**

- To understand single-stage amplifier principles and design considerations.
- To analyze high-frequency behavior and noise characteristics of amplifiers.
- To comprehend negative feedback circuits and operational amplifier performance.
- To analyze stability and design frequency compensation techniques.
- To gain proficiency in logic circuit testing and fault detection.

**UNIT I SINGLE STAGE AMPLIFIERS 9**

Basic MOS physics and equivalent circuits and models, CS, CG and Source Follower, differential amplifier with active load, Cascode and Folded Cascode configurations with active load, design of Differential and Cascode Amplifiers – to meet specified SR, noise, gain, BW, ICMR and power dissipation, voltage swing, high gain amplifier structures, Basic Current Mirror, Active current mirror.

**UNIT II HIGH FREQUENCY AND NOISE CHARACTERISTICS OF AMPLIFIERS 9**

Miller effect, association of poles with nodes, frequency response of CS, CG and Source Follower, Cascode and Differential Amplifier stages, statistical characteristics of noise, noise in Single Stage amplifiers, noise in Differential Amplifiers.

**UNIT III FEEDBACK AND SINGLE STAGE OPERATIONAL AMPLIFIERS 9**

Properties and types of negative feedback circuits, effect of loading in feedback networks, operational amplifier performance parameters, single stage Op Amps, two-stage Op Amps, input range limitations, gain boosting, slew rate, power supply rejection, noise in Op Amps.

**UNIT IV STABILITY, FREQUENCY COMPENSATION 9**

Multipole Systems, Phase Margin, Frequency Compensation, Compensation Of Two Stage Op Amps, Slewing In Two Stage Op Amps, Other Compensation Techniques.

**UNIT V ANALOG FAULT TESTING 9**

Basic Concepts of Analog Fault Detection -Analog fault models- Parametric and Deviation faults- Analog Test Approaches Analog Test Waveforms DC Parametric Testing AC Parametric Testing

**TOTAL: 45 PERIODS**

**PRACTICAL EXERCISES:**

**TOTAL: 30 PERIODS**

- Design of Basic and Cascode Current Mirrors.
- Design of Single stage amplifiers (common source with diode connected and current source load)

3. Design a Common drain amplifier and analyze its performance.
4. Design a Common gate amplifier and analyze its performance.
5. Design three stage and five stage ring oscillator circuits and compare its frequencies.
6. Design of Two stage Operational Amplifier.

**Course Outcomes:**

Upon Completion of the course the students will be able to

- CO1: Design amplifiers to meet user specifications.
- CO2: Analyse the frequency and noise performance of amplifiers.
- CO3: Design and analyse feedback amplifiers and one stage op amps.
- CO4: Analyse stability of op amp.
- CO5: Testing experience of logic circuits.

Course Code	<b>LOW POWER VLSI DESIGN</b>	L	T	P	C
<b>AC3V16</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To learn the Low Power VLSI concepts and Power design.
- To gain Knowledge on the Low Voltage Low Power CMOS Circuit Design.
- To design the low voltage VLSI BiCMOS Circuit.
- To understand the low power CMOS static and Dynamic RAM Circuits.
- To understand the concept of power reduction in clock networks and Adiabatic.

**UNIT I INTRODUCTION TO LOW POWER VLSI 9**

Introduction,Needs for low power VLSI, Charging and Discharging Capacitance, Short circuit current of CMOS inverter, CMOS leakage current, Static Current, Basic Principles of Low power design, Low power Figure of Merits.

**UNIT II LOW-VOLTAGE LOW-POWER CMOS CIRCUIT DESIGN 9**

TSPC Latches and Flip-Flops, Differential Single-clock Latches and Flip-flops-DVSL Static RAM latch, Single transistor clocked differential latch TSPC Double pipeline, CDPD technique, Voltage scaling based circuit techniques- Multiple voltage Techniques, Low voltage swing

**UNIT III LOW-VOLTAGE BiCMOS CIRCUIT DESIGN 9**

onventional BiCMOS Logic – DC and Transient Switching Characteristics, Power Dissipation, Full swing with shunting devices, BiNMOSLogic Family – Gate design, logic gates, power supply voltage swing, Low – voltage BiCMOS families – Merged and Quasi complementary BiCMOS logic, Full swing CE complementary BiCMOS circuit, Bootstrapped BiCMOS

**UNIT IV                      LOW-POWER CMOS RANDOM ACCESS MEMORY CIRCUITS                      9**

**Static RAM** – Basics of SRAMs, Static RAM Cells, Read/Write Operation, ATD circuits, Decoders, Bit line conditioning circuitry, Sense Amplifier, Output latch, Hierarchical word line for low power memory

**Dynamic RAM** – Basics of a DRAM, DRAM Memory cell, Read/Write Circuitry, low power techniques, Bit Line Capacitance reduction, Multi dividend word line, Half voltage generator, Back bias generator, self-Refresh technique

**UNIT V                      ADVANCED TECHNIQUES                      9**

Power Reduction in Clock networks – Clock gating, Reduced swing clock, Oscillator Circuit for clock generation, Frequency Division and Multiplication, CMOS Floating Node, Low Power Bus, Delay Balancing, Adiabatic Computation, Pass Transistor Logic Synthesis, Asynchronous Circuits

**TOTAL: 45 PERIODS**

**Course Outcomes:**

**Upon Completion of the course the students will be able to**

- CO1: Manifest the Knowledge of Low power VLSI, Power estimation and its impact on future of CMOS.
- CO2: Design Dynamic CMOS latches, Flip-flops with power reduction.
- CO3: Optimize speed and switching activity using special techniques.
- CO4: Relate Adiabatic and energy recovery techniques to trade dynamic power dissipation for delay in switching circuits.
- CO5: Apply low power technique concepts in various Applications.

**Text Books:**

## VERTICAL 2: SIGNAL PROCESSING

<b>Course Code</b>	<b>ADAPTIVE SIGNAL PROCESSING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>AC3V21</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

### COURSE OBJECTIVES:

- To provide an in-depth coverage of the adaptive filter theory.
- To provide the mathematical framework for the understanding of adaptive statistical signal processing.
- To know the basic tools of vector spaces and discrete-time stochastic process.
- To introduce various types of adaptive filters and their properties will be studied, specifically convergence, tracking, robustness and computational complexity.
- Learn to apply adaptive filter theory using prescribed case studies.

### UNIT I 9 **STOCHASTIC PROCESSES AND SPECTRUM ESTIMATION**

Statistical characteristics of a stochastic process-Non-Parametric methods - Correlation method - Co-variance estimator - Performance analysis of estimators - Unbiased consistent estimators - Periodogram estimator - Barlett spectrum estimation - Welch estimation - Model based approach - AR, MA, ARMA Signal modeling - Parameter estimation using Yule-Walker method.

### UNIT II 9 **WIENER FILTERS**

Optimum Filtering-The normal equations and the Wiener filter-Minimum mean square error estimation and the orthogonality principle-Wiener-Hopf equations- Linear prediction-forward Linear Prediction-Backward linear prediction-Levinson-Durbin algorithm.

### UNIT III 9 **GRADIENT-BASED ADAPTIVE FILTERS**

Basic idea of the steepest descent algorithm- The steepest descent algorithm applied to wiener filter - Stability of the steepest descent algorithm- The LMS algorithm-LMS adaptive algorithm Method of Least Squares-Data windowing-Properties of LS Estimates-MVDR spectrum estimation. Recursive Least Squares (RLS)-Exponentially weighted RLS-Convergence analysis-Sliding window RLS.

### UNIT IV 9 **KALMAN FILTERS & TRACKING**

Statement of the kalman filtering problem-The innovation process- Estimation- Filtering -Initial conditions. Variants of the kalman filter-The Extended Kalman filter-Criteria for tracking assessment-Tracking performance of the LMS and RLS algorithms- Comparison.

### UNIT V 9 **APPLICATIONS**

Channel equalization-Echo cancellation- De-convolution- Adaptive noise cancellation-Adaptive interference cancellation. Case study.

**TOTAL: 45 PERIODS**

### Course Outcomes:

Upon Successful Completion of the course the students will be able to

C01: Gain a solid foundation in adaptive filter theory, focusing on designing filters that can self-optimize through learning from processes.

C02: Be able to implement adaptive filters effectively, applying both time and frequency domain concepts with computational tools.

**UNIT IV** **SPEECH ENHANCEMENT** 9

Classes of Speech Enhancement Algorithms, Spectral-Subtractive Algorithms – Multiband Spectral Subtraction, MMSE Spectral Subtraction Algorithm, Spectral Subtraction Based on Perceptual Properties, Wiener Filtering - Wiener Filters in the Time Domain, Wiener Filters in the Frequency Domain, Wiener Filters for Noise Reduction, Maximum-Likelihood Estimators, Bayesian Estimators, MMSE and Log-MMSE Estimator, Subspace Algorithms.

**UNIT V** **SPEECH SYNTHESIS AND APPLICATION** 9

A Text-to-Speech systems (TTS), Synthesizers technologies – Concatenative synthesis, Use of Formants for concatenative synthesis, Use of LPC for concatenative synthesis, HMM-based synthesis, Sine wave synthesis, Speech transformations, Watermarking for authentication of a speech, Emotion recognition from speech

**TOTAL : 45 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Course Outcomes:**

Upon Completion of the course the students will be able to

C01: Understand the fundamentals of speech..

C02: Extract various speech features for speech related applications

C03: Choose an appropriate speech coder for a given application.

C04: Build a speech enhancement system.

C05: Build a text-to-speech synthesis system for various applications

**Text Books:**

1. Shaila D. Apte, Speech and Audio Processing, Wiley India (P) Ltd, New Delhi, 2022

2. Philipos C. Loizou, Speech Enhancement Theory and Practice, Second Edition, CRC Press, Inc., United States, 2023

**References:**

1. Rabiner L. R. and Juang B. H, Fundamentals of speech recognition, Pearson Education, 2023

2. Thomas F. Quatieri, Discrete-time speech signal processing - Principles and practice, Pearson, 2022

Course Code	<b>RADAR SIGNAL PROCESSING</b>	L	T	P	C
<b>AC3V23</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To understand the Radar Signal acquisition and sampling in multiple domains
- To provide clear instruction in radar DSP basics
- To equip the skills needed in both design and analysis of common radar algorithms
- To understand the basics of synthetic aperture imaging and adaptive array processing
- To illustrate how theoretical results are derived and applied in practice

**UNIT I INTRODUCTION TO RADAR SYSTEMS 9**

History and application of radar, basic radar function, elements of pulsed radar, review of signal processing concepts and operations, A preview of basic radar signal processing, radar system components, advanced radar signal processing

**UNIT II SIGNAL MODEL 9**

Components of a radar signal, amplitude models, types of clutters, noise model and signal-to-noise ratio, jamming, frequency models: the doppler shift, spatial models, spectral model.

**UNIT III SAMPLING AND QUANTIZATION OF PULSED RADAR SIGNALS 9**

Domains and criteria for sampling radar signals, Sampling in the fast time dimension, Sampling in slow time: selecting the pulse repetition interval, sampling the doppler spectrum, Sampling in the spatial and angle dimension, Quantization, I/Q Imbalance and Digital I/Q.

**UNIT IV RADAR WAVEFORMS 9**

Introduction, The waveform matched filter, Matched filtering of moving targets, The ambiguity function, The pulse burst waveform, frequency-modulated pulse compression waveforms, Range sidelobe control for FM waveforms, the stepped frequency waveform, Phase-modulated pulse compression waveforms, COSTAS Frequency Codes

**UNIT V DOPPLER PROCESSING 9**

Alternate forms of the Doppler spectrum, Moving target indication (MTI), Pulse Doppler processing, dwell-to-dwell stagger, Pulse pair processing, additional Doppler processing issues, clutter mapping and the moving target detector, MTI for moving platforms: adaptive displaced phase center antenna processing

**TOTAL: 45 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Course Outcomes:**

Upon Completion of the course the students will be able to

C01: perform radar signal acquisition and sampling

C02: perform algorithm on radar processing

C03 design basic radar algorithm

C04: design on aperture imaging and array processing

C05: Illustrate theoretical results are derived and applied in practice

**Text Books:**

1. And Marvin N. Cohen, Fred E. Nathanson, Radar Design Principles-Signal Processing and the environment PHI, 2nd edition, 2006.
2. Radar Principles, Peyton Z. Peebles, Wiley India 2009

**References:**

1. Michael O Kolawole, "Radar systems, Peak Detection and Tracking", Elseveir. 2003
2. Introduction to Radar Systems 3/E, Skolnik, McGraw Hill. 2017

Course Code	<b>AR / VR</b>	L	T	P	C
<b>AC3V24</b>		3	0	0	3

**COURSE OBJECTIVES:**

- Understand Virtual Reality fundamentals, applications, and scientific landmarks in 3D computer graphics.
- Explore interactive techniques, geometric transformations, and generic VR systems.
- Examine visual computation in VR, including animation and physical simulation.
- Gain insights into augmented and mixed reality, covering taxonomy and challenges.
- Explore multiple input and output interfaces in VR, including hardware and software components.

**UNIT I INTRODUCTION OF VIRTUAL REALITY 9**

Introduction, Fundamental Concept and Components of Virtual Reality. Primary Features and Present Development on Virtual Reality. Computer graphics, Real time computer graphics, Flight Simulation, Virtual environment requirement, benefits of virtual reality, Virtuality and Immersion, Current trends and state of the art in immersive technologies, developing platforms and consumer devices. Scientific Landmark 3D Computer Graphics: Introduction, The Virtual world space, positioning the virtual observer, the perspective projection, human vision, stereo perspective projection, 3D clipping, Colour theory, Simple 3D modelling, Illumination models, Reflection models, Shading algorithms

**UNIT II INTERACTIVE TECHNIQUES IN VIRTUAL REALITY 9**

Introduction, From 2D to 3D, 3D space curves, 3D boundary representation Geometrical Transformations: Introduction, Frames of reference, Modeling transformations, Instances, Picking, Flying, Scaling the VE, Collision detection Generic VR system: Introduction, Virtual environment, Computer environment, VR technology, Model of interaction, VR Systems.

**UNIT III VISUAL COMPUTATION IN VIRTUAL REALITY 9**

Animating the Virtual Environment: Introduction, The dynamics of numbers, Linear and Nonlinear interpolation, the animation of objects, linear and non-linear translation, shape & object inbetweening, free from deformation, particle system. Physical Simulation: Introduction, Objects falling in a gravitational field, Rotating wheels, Elastic collisions, projectiles, simple pendulum, springs, Flight dynamics of an aircraft.

#### **UNIT IV AUGMENTED AND MIXED REALITY**

9

Taxonomy, technology and features of augmented reality, difference between AR and VR, Challenges with AR, AR systems and functionality, Augmented reality methods, visualization techniques for augmented reality, wireless displays in educational augmented reality applications, mobile projection interfaces, marker-less tracking for augmented reality, enhancing interactivity in AR environments, evaluating AR systems.

#### **UNIT V MULTIPLE MODELS OF INPUT AND OUTPUT INTERFACE IN VIRTUAL REALITY 9**

Human factors: Introduction, the eye, the ear, the somatic senses. VR Hardware: Introduction, sensor hardware, Head-coupled displays, Acoustic hardware, Integrated VR systems. VR Software: Introduction, Modeling virtual world, Physical simulation, VR toolkits, Introduction to VRML, Input -- Tracker, Sensor, Digital Glove, Movement Capture, Video-based Input, 3D Menus & 3D Scanner etc. Output -- Visual /Auditory/ Haptic Devices.

**TOTAL : 45 PERIODS**

#### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

#### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

#### **Course Outcomes:**

After learning the course, the students should be able to:

CO1: Demonstrate understanding and design of VR/AR technology relates to human perception and cognition

CO2: Ability to design 3D interaction techniques

CO3: Demonstrate understanding of fundamental computer vision, computer graphics and human-computer interaction techniques related to VR/AR

CO4: Demonstrate insights to key application areas for VR/AR

CO5: Able to create applications of VR to the conduct of scientific research, training, and industrial design.

Course Code	<b>DSP ARCHITECTURES</b>	L	T	P	C
<b>AC3V25</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To understand the structure of multipliers and the principles of pipelining.
- To study and analyze the architecture and features of the TMS320C5X processor.
- To study and analyze the architecture and features of the TMS320C6X processor.
- To explore and evaluate the ADSP processors.
- To learn about advanced Digital Signal Processing (DSP) processors and their applications.

**UNIT I INTRODUCTION TO BCI 9**  
Multiplier and Multiplier accumulator – Modified Bus Structures and Memory access in PDSPs – Multiple access memory – Multi-port memory – VLIW architecture- Pipelining – Special Addressing modes in P-DSPs – On chip Peripherals.

**UNIT II TMS320C5X PROCESSOR 9**  
Architecture – Assembly language syntax - Addressing modes – Assembly language Instructions - Pipeline structure, Operation – Block Diagram of DSP starter kit – Application Programs for processing real time signals.

**UNIT III TMS320C6X PROCESSOR 9**  
Architecture of the C6x Processor - Instruction Set - DSP Development System: Introduction– DSP Starter Kit Support Tools- Code Composer Studio - Support Files - Programming Examples to Test the DSK Tools – Application Programs for processing real time signals.

**UNIT IV ADSP PROCESSORS 9**  
Architecture of ADSP-21XX and ADSP-210XX series of DSP processors- Addressing modes and assembly language instructions – Application programs –Filter design, FFT calculation.

**UNIT V ADVANCED PROCESSORS 9**  
Architecture of TMS320C53X: Pipe line operation, Code Composer studio – Architecture of TMS320C6X - Architecture of Motorola DSP563XX – Comparison of the features of DSP family processors.

**TOTAL : 45 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Course Outcomes:**

- Upon Completion of the course the students will be able to
- CO1. Describe the structure of multipliers and the principles of pipelining.
  - CO2. Analyze the architecture and features of the TMS320C5X processor.

- CO3. Analyze the architecture and features of the TMS320C6X processor.  
 CO4. Evaluate the architecture and features of ADSP processors.  
 CO5. Understand and apply advanced Digital Signal Processing (DSP) processors.

**Text Books:**

2. User guides Texas Instrumentation, Analog Devices, Motorola, 2022

Course Code	<b>BRAIN COMPUTER INTERFACE AND APPLICATIONS</b>	L	T	P	C
<b>AC3V26</b>		3	0	0	3

**COURSE OBJECTIVES:**

- Understand the fundamentals of Brain-Computer Interface (BCI) systems and their potential applications.
- Study event-related potentials and sensory motor rhythms for BCI analysis.
- Learn to compute features suitable for effective BCI implementation.
- Develop skills to design classifiers for BCI systems.
- Gain practical knowledge to implement BCI systems for various applications.

**UNIT I INTRODUCTION TO BCI 9**  
 Fundamentals of BCI – Structure of BCI system – Classification of BCI – Invasive, Non-invasive and Partially invasive BCI – EEG signal acquisition - Signal Preprocessing – Artifacts removal.

**UNIT II ELECTROPHYSIOLOGICAL SOURCES 9**  
 Sensorimotor activity – Mu rhythm, Movement Related Potentials – Slow Cortical Potentials- P300 -Visual Evoked Potential - Activity of Neural Cells - Multiple Neuromechanisms.

**UNIT III FEATURE EXTRACTION METHODS 9**  
 Time/Space Methods – Fourier Transform, PSD – Wavelets – Parametric Methods – AR,MA,ARMA models – PCA – Linear and Non-Linear Features.

**UNIT IV FEATURE TRANSLATION METHODS 9**  
 Linear Discriminant Analysis – Support Vector Machines - Regression – Vector Quantization– Gaussian Mixture Modeling – Hidden Markov Modeling – Neural Networks.

**UNIT V APPLICATIONS OF BCI 9**

Functional restoration using Neuroprosthesis - Functional Electrical Stimulation, Visual Feedback and control - External device control, Case study: Brain actuated control of mobile Robot.

**TOTAL: 45 PERIODS**

**Course Outcomes:**

Upon Completion of the course the students will be able to

CO1: Describe BCI system and its potential applications.

CO2: Analyze event related potentials and sensory motor rhythms.

CO3: Compute features suitable for BCI.

CO4: Design classifier for a BCI system.

CO5: Implement BCI for various applications.

**Text Books:**

1. Bernhard Graimann, Brendan Allison, Gert Pfurtscheller, "Brain-Computer Interfaces: Revolutionizing Human-Computer Interaction", Springer, 2020.

**References:**

1 R. Spehlmann, "EEG Primer", Elsevier Biomedical Press, 2022.

2. Arnon Kohen, "Biomedical Signal Processing", Vol I and II, CRC Press Inc, Boca Rato, Florida, 2023.

### VERTICAL III: EMBEDDED SYSTEMS AND IOT

Course Code	<b>REAL TIME OPERATING SYSTEMS</b>	L	T	P	C
<b>AC3V31</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To expose the students to the fundamentals of interaction of OS with a computer and User computation.
- To teach the fundamental concepts of how process are created and controlled with OS.
- To study programming logic of modeling Process based on range of OS features.
- To compare types and Functionalities in commercial OS, application development using RTOS.
- To involve Discussions/ Practice/Exercise onto revising & familiarizing the concepts acquired.

**UNIT I INTRODUCTION TO OPERATING SYSTEMS 9**

Basic of Operating system – Evolution of operating system – Hardware review- Types of Operating system - Operating system concepts - Systems calls – Operating system structure.

**UNIT II PROCESSES AND THREADS 9**

RTOS Architecture – RTOS Task and Task state, Process Synchronization, Message queues, shared memory, Mail boxes, pipes, Critical section, Semaphores, mutex, priority inversion and ceiling, circular and swinging buffers.

**UNIT III TASK MANAGEMENT AND RTOS SCHEDULING 9**

Process and Threads, Process Control Block, Process Attributes, Interrupt processing, memory management, Priority based scheduling, Rate-Monotonic scheduling, Earliest Deadline first scheduling

**UNIT IV REALTIME KERNEL 9**

Principles, Kernel, Monolithic and Microkernel, Design issues, Polled Loop Systems, RTOS Porting to a Target, Comparison and Basic study of various RTOS like VX works Linux supportive RTOS.

**UNIT V FREE RTOS Concepts 9**

Over view of Free RTOS – Architecture – Advanced Free RTOS concepts – Implementation of Task Scheduling, Queue management, mutex, Semaphore with Free RTOS.

**TOTAL: 45 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**Course Outcomes:**

Upon Completion of the course the students will be able to  
 CO1: Understand Operating System structures and types.

C02: Analyze the operating systems tasks and its access to the resources.

C03: Analyze the scheduling, disciplining of various processes execution.

C04: Demonstrate commercial RTOS Suite features to work on real time processes design.

C05: Develop Employability and entrepreneurship capacity due to knowledge up gradation on recent trends in RTOS and embedded automation design.

### **PRACTICAL EXERCISES:**

#### 1. Task Creation and Management

Exercise: Create tasks to blink LEDs at different rates using `vTaskDelay` and manage task priorities with `vTaskPrioritySet`.

#### 2. Mutexes and Task Synchronization

Exercise: Create two tasks accessing a shared resource. Use mutexes (`xSemaphoreCreateMutex`, `xSemaphoreTake`, `xSemaphoreGive`) to prevent race conditions.

#### 3. Semaphore and Event Group Usage

Exercise: Implement a scenario where one task waits for an event signaled by another using semaphores (`xSemaphoreCreateBinary`, `xSemaphoreGive`, `xSemaphoreTake`) and event groups (`xEventGroupCreate`, `xEventGroupSetBits`, `xEventGroupWaitBits`).

#### 4. Interrupt Service Routines (ISRs) and Queues

Exercise: Set up an interrupt-driven scenario with an external button press. Use an ISR to add data to a queue (`xQueueSendFromISR`) and a task to process it (`xQueueReceive`).

#### 5. Task Priorities and Scheduler

Exercise: Create tasks with different priorities and observe scheduling. Dynamically change priorities with `vTaskPrioritySet` to simulate real-time constraints.

#### 6. Memory Management and Dynamic Memory Allocation

Exercise: Allocate and deallocate memory using `pvPortMalloc` and `vPortFree`. Monitor heap usage and handle memory fragmentation and allocation failures.

#### 7. Software Timers and Task Synchronization

Exercise: Implement periodic tasks using software timers (`xTimerCreate`, `xTimerStart`, `xTimerStop`) for task synchronization and event triggering.

Course Code	<b>IoT AND INDUSTRY 4.0</b>	L	T	P	C
<b>AC3V32</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To provide the overview about evolution and importance of Industrial IoT in the era of Industry 4.0
- To introduce the Industrial IoT reference architectures and Business models in industrial automation systems
- To understand the on-site key technologies for the requirement of a smart factory
- To get the knowledge of Industrial IoT data Analytics
- To apply the technologies of Industrial IoT in various Industries as case studies.

**UNIT I INTRODUCTION AND KEY TECHNOLOGIES 9**

Industrial revolutions. Cyber physical systems and Next generation sensors. On-site key technologies in Industry 4.0, AR-VR, Big data Analytics, Smart factories and Lean Manufacturing system.

**UNIT II INDUSTRIAL AUTOMATION AND IOT 9**

Evolution of IT and OT convergence. Industrial sensing, Industrial Processes and Industrial Network. Business models and IIRA Reference architecture of IIOT, Industrial internet Consortium (IIC).

**UNIT III INDUSTRIAL DATA TRANSMISSION AND COMPUTING 9**

Foundation Fieldbus, Profibus, CC-link, MODBUS, Digital STROM, CAN, Device Net, ISA 100.11a, Wireless HART, NB-IoT. Edge and Fog Computing solutions. Cloud services.

**UNIT IV DATA ANALYTICS AND SECURITY 9**

Necessity of Analytics and IIOT Data Analytics. Machine Learning and Data Science applications in Industries. Artificial Intelligence for IIOT, IoT Security- Vulnerabilities, Threat Analysis, Security model for IoT.

**UNIT V APPLICATIONS OF IIOT 9**

Healthcare Applications, Inventory Management and Quality Control. Case studies in Manufacturing Industry, Automotive Industry, Mining Industry, Textile Industry.

**TOTAL : 45 PERIODS**

**Course Outcomes:**

Upon Completion of the course the students will be able to

CO1: Understand about the evolution of Industry 4.0 in smart factories and cyber physical systems.

CO2: Identify the process of industrial automation system network and control.

CO3: Illustrate the reference architectural models and business models with key enabling technologies

CO4: Analyse the data of the industrial IoT systems with security.

CO5: Apply the technologies to various sectors and case study the application of Industrial IoT in smart industries.

**Text Books:**

Course Code	<b>COMMUNICATION PROTOCOL AND STANDARDS</b>	L	T	P	C
<b>AC3V33</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To analyze the components and need for communication in Electronic Control Unit(ECU)
- To analyze the functions and frame format of CAN protocols
- To analyze the concept of LIN Bus, MOD bus and Flex Ray protocols
- To analyze the functions of OBD communication in inter vehicle communication
- To understand the Autosar Standard and its architecture

<b>UNIT I</b>	<b>INTRODUCTION</b>	<b>9</b>
	Introduction to ECU Functions and Components, Need for Communication in ECU, Types of Communication, Onboard Communication, Diagnostic Communication, Measurement and Calibration, In Vehicle Cybersecurity Issues and Challenges.	
<b>UNIT II</b>	<b>BASIC PROTOCOLS</b>	<b>9</b>
	Basic functionality of GPIO , UART, I <sup>2</sup> C - Bus Architecture , Communication process, Advanced features , SPI - Bus Architecture , Communication Process, Advanced features.	
<b>UNIT III</b>	<b>AUTOMOTIVE &amp; INDUSTRIAL PROTOCOLS</b>	<b>9</b>
	Introduction to CAN, CAN controller block diagram and working- Electrical properties-CAN signalling and data rates, CAN data frame format, Error Handling mechanism - Software for CAN controller interfacing - CAN development tools- Basics of LIN bus protocol, Basics of MODBUS protocol.	
<b>UNIT IV</b>	<b>HIGH-LEVEL COMMUNICATION PROTOCOLS</b>	<b>9</b>
	Onboard Communication J1939, Introduction, Key Characteristics, J1939 Standard and Layer Model, J1939 PGN and SPN, J1939 Transport Protocol, OBD II, OBD vs ISO OSI Layers, OBD Connectors, OBD Services, OBD Parameter ID (PIDs), OBD Connectors	
<b>UNIT V</b>	<b>AUTOSAR ARCHITECTURE</b>	<b>9</b>
	Introduction to Autosar Standard and Consortium, Need for Autosar Architecture, Virtual Function Bus, Layered Architecture Model, Microcontroller Abstraction Layer, ECU Abstraction Layer, Service layer, Autosar example	

**TOTAL: 45 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### Course Outcomes:

Upon Completion of the course the students will be able to

CO1: Choose the suitable ECU components for different communication

CO2: Analyze the performance of CAN protocols

CO3: Analyze the performance of LINBus, MODbus and Flex Ray protocols

CO4: Illustrate the architecture of OBD communication

CO5: Illustrate the architecture of Autosar Standard

### Text Books:

1. Olaf Pfeiffer, Andrew Ayre and Christian Keydel, Embedded networking with CAN and CANopen, Copperhill Technologies Corporation, 2022

### References:

1. Reference: [www.can.cia.org](http://www.can.cia.org)

5. Xiu Ji, Profibus in practice: System Architecture and Design, CRC press, 2015

Course Code	<b>ARM ARCHITECTURE AND PROGRAMMING</b>	L	T	P	C
<b>AC3V34</b>		3	0	0	3

### COURSE OBJECTIVES:

- To understand the embedded system based on ARM processor and its hardware (ARM processor Core).
- To understand the techniques and rules for writing efficient C code and optimizing ARM assembly code.
- To discuss various Cache technologies and Architecture that surrounds the ARM cores and MMU.
- To Understand the architecture of ARM CORTEX-M3
- To understand Smart OS and video conferencing systems

#### UNIT I

#### ARM ARCHITECTURE

9

ARM Design Philosophy, Registers, Program Status Register, Instruction Pipeline, Interrupts and Vector Table, Architecture Revision, ARM Processor Families.

#### UNIT II

#### ARM PROGRAMMING MODEL – I

9

Instruction Set: Data Processing Instructions, Addressing Modes, Branch, Load –Store Instructions, PSR Instructions, Conditional Instructions.

#### UNIT III

#### ARM PROGRAMMING MODEL – II

9

Thumb Instruction Set: Register Usage, Other Branch Instructions, Data Processing Instructions, Single-Register and Multi Register Load-Store Instructions, Stack, Software Interrupt Instructions

**UNIT IV** **ARM PROGRAMMING** **9**  
 Cache Architecture, Polices, Flushing and Caches, MMU, Page Tables, Translation, Access Permissions, Context Switch.

**UNIT V** **ARM CORTEX M3** **9**  
 ARM Cortex-M3 Processor –Architecture- Instruction Set Development-The Thumb-2 Technology and Instruction Set Architecture-CORTEX-M3 Applications.

**TOTAL: 45 PERIODS**

**Course Outcomes:**

Upon Successful Completion of the course the students will be able to  
 CO1: Understand the basics of ARM architecture and how different ARM processors work.  
 CO2: Write efficient code using ARM's instruction sets and addressing modes.  
 CO3: Manage and optimize memory and processes using ARM's system-level features.  
 CO4: Develop applications for ARM Cortex-M3 processors, utilizing its specific features.  
 CO5: Apply their knowledge to design and implement embedded systems using ARM technology.

**Text Books:**

1. ARM System Developer’s guide –Andrew N. SLOSS, ELSEVIER Publications, 2016
2. ARM Assembly Language – William Hohl, CRC Press, ISBN:978-81-89643-04-1

**References:**

1. Embedded Systems: A Contemporary Design Tool- James K. Peckol , ELSEVIER Publications 2022
2. ARM System-on-chip Architecture by Steve Furber, Pearson Education, 6E, 2022

Course Code	<b>EDGE DATA ANALYTICS</b>	L	T	P	C
<b>AC3V35</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To learn the techniques and components of Edge Computing.
- To study about various data collection and preprocessing for edge devices
- To apply different data analytics techniques for different problems
- To study about different data visualization and Interpretation
- To learn about data security and privacy techniques.

**UNIT I** **INTRODUCTION TO EDGE DATA ANALYTICS** **9**

Overview of Edge Computing and its significance; Role of Edge Data Analytics in real-time decision-making; Challenges and opportunities in Edge Data Analytics; Edge computing architectures and deployment models - distinction between edge, fog, and cloud layers, edge clouds, mobile edge computing (MEC), and industrial edge computing; Edge devices and sensors for data collection- GPU , TPU based hardware accelerators.

**UNIT II** **EDGE DATA COLLECTION AND PREPROCESSING** **9**

Data collection techniques at the edge (e.g., IoT devices, sensors) Edge data preprocessing and filtering algorithms Data compression and aggregation techniques for resource-constrained devices Edge-based data cleaning and quality assurance Edge data integration and synchronization with cloud or central servers

**UNIT III** **EDGE DATA ANALYTICS TECHNIQUES** **9**  
 Machine learning algorithms for edge data analysis (e.g., classification, regression) Statistical analysis methods for real-time data streams Edge-based anomaly detection and outlier identification Time-series analysis and forecasting at the edge Distributed and parallel computing techniques for edge analytics

**UNIT IV** **EDGE DATA VISUALIZATION AND INTERPRETATION** **9**  
 Visualization techniques for edge data analytics Real-time dashboards and data monitoring at the edge Visualization of streaming data from multiple edge devices Interactive visualization tools for edge analytics Visual storytelling and decision support through edge data visualization

**UNIT V** **EDGE DATA SECURITY AND PRIVACY** **9**  
 Security challenges in edge data analytics Secure communication protocols for edge devices Privacy-preserving techniques for edge data collection and analysis Access control and authentication in edge computing environments Legal and ethical considerations in edge data analytics

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

CO1: Able to understand edge data analytics, including data preprocessing, real-time analytics, distributed computing, and edge computing architectures.

CO2: Able to learn data collection methods and preprocessing techniques specifically designed for edge devices

CO3: Able to learn will gain hands-on experience in developing real-time analytics algorithms for edge devices

CO4: Able to will learn techniques to optimize edge data analytics for resource-constrained environments

CO5: Able to analyze the security and privacy challenges associated with edge data analytics

**TEXTBOOKS:**

1."Edge Analytics: A Comprehensive Guide for Internet of Things Data Analytics" by Satyajit Das and Taposh Dutta Roy (Published in 2018)

2."Edge Analytics in the Internet of Things: A Hands-on Introduction with Raspberry Pi and Edge Computing" by Madhura Jayaratna (Published in 2020)

3."Practical Industrial Internet of Things Security: A practitioner's guide to securing connected industries and supply chains" by Sravani Bhattacharjee, Debashis De, and Mohammad Saiful Islam (Published in 2022)

Course Code	<b>SMART SYSTEM AUTOMATION</b>	L	T	P	C
<b>AC3V36</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To introduce the smart system technologies and its role in real time applications

- To teach the architecture and requirements of Home Automation.
- To provide an insight into smart appliances and energy management concepts.
- To familiarize the design and needs of smart wearable devices
- To teach the basics of robotics and its role for automation.

<b>UNIT I</b>	<b>INTRODUCTION</b>	<b>9</b>
Overview of a smart system - Hardware and software selection - Smart sensors and Actuators – Communication protocols used for smart systems.		
<b>UNIT II</b>	<b>HOME AUTOMATION</b>	<b>9</b>
Home Automation – System Architecture - Essential Components- Design Considerations: Control Unit, Sensing Requirements, Communication, Data Security.		
<b>UNIT III</b>	<b>SMART APPLIANCES AND ENERGY MANAGEMENT</b>	<b>9</b>
Significance of smart appliances for energy management -Smart Meters: Significance, Architecture & Energy Measurement Technique – Security Considerations.		
<b>UNIT IV</b>	<b>SMART WEARABLE DEVICES</b>	<b>9</b>
Body Area Networks - Sensors– communication protocol for Wearable devices- Application of Smart Wearable in Healthcare & Activity Monitoring.		
<b>UNIT V</b>	<b>EMBEDDED SYSTEMS AND ROBOTICS</b>	<b>9</b>
Fundamental concepts in Robotics- Robots and Controllers components - Embedded processor based: pick and place robot- Mobile Robot Design- UAV.		

**TOTAL : 45 PERIODS**

**Course Outcomes:**

Upon Completion of the course the students will be able to

- C01: Understand the concepts of smart system design and its present developments
- C02: Illustrate different embedded open-source and cost-effective techniques for developing solution for real time applications.
- C03: Acquire knowledge on different platforms and Infrastructure for Smart system design.
- C04: Infer about smart appliances and energy management concepts.
- C05: Improve Employability and entrepreneurship capacity due to knowledge upgradation on embedded system technologies.

#### VERTICAL 4: ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

Course Code	<b>DATA ANALYTICS AND VISUALIZATION</b>	L	T	P	C
<b>AC3V41</b>		2	0	2	3

**COURSE OBJECTIVES:**

- To understand the data science fundamentals and process.
- To learn to describe the relationship between data.
- To utilize present and interpret data using Python libraries for Data Wrangling and data visualization.
- To study the basic inferential statistics, sampling distribution and processes in data analytics
- To understand the data analytics techniques and apply descriptive data analytics techniques

**UNIT I INTRODUCTION 6**

Data Science: Benefits and uses – facets of data - Data Science Process: Overview – Defining research goals – Retrieving data – Data preparation - Exploratory Data analysis – build the model– presenting findings and building applications - Data Mining - Data Warehousing – Basic Statistical descriptions of Data.

**UNIT II DESCRIBING DATA 6**

Basics of Numpy arrays –aggregations –computations on arrays –comparisons, masks, boolean logic – fancy indexing – structured arrays – Data manipulation with Pandas – data in Types of Data - Types of Variables -Describing Data with Tables and Graphs –Describing Data with Averages - Describing Variability - Normal Distributions and Standard (z) Scores.

**DESCRIBING RELATIONSHIPS:** Correlation –Scatter plots –correlation coefficient for quantitative data –computational formula for correlation coefficient – Regression –regression line –least squares regression line – Standard error of estimate – interpretation of r2 –multiple regression equations –regression towards the mean

**UNIT III PYTHON LIBRARIES FOR DATA WRANGLING 6**

Indexing and selection – operating on data – missing data – Hierarchical indexing – combining datasets – aggregation and grouping – pivot tables

**DATA VISUALIZATION:** Importing Matplotlib – Line plots – Scatter plots – visualizing errors – density and contour plots – Histograms – legends – colors – subplots – text and annotation – customization – three-dimensional plotting - Geographic Data with Basemap - Visualization with Seaborn.

**UNIT IV DESCRIPTIVE ANALYTICS AND INFERENCE STATISTICS 6**

DESCRIPTIVE ANALYTICS - Frequency distributions – Outliers –interpreting distributions – graphs – averages - describing variability – interquartile range – variability for qualitative and ranked data - Normal distributions – z scores –correlation – scatter plots – regression –

regression line – least squares regression line – standard error of estimate – interpretation of  $r^2$  – multiple regression equations – regression toward the mean.

INFERENTIAL STATISTICS - populations – samples – random sampling – Sampling distribution- standard error of the mean - Hypothesis testing – z-test – z-test procedure – decision rule – calculations – decisions – interpretations - one-tailed and two-tailed tests – Estimation – point estimate – confidence interval – level of confidence – effect of sample size.

## **UNIT V ANALYSIS OF VARIANCE AND PREDICTIVE ANALYTICS 6**

ANALYSIS OF VARIANCE - T-test for one sample – sampling distribution of t – t-test procedure – t-test for two independent samples – p-value – statistical significance – t-test for two related samples. F-test – ANOVA – Two-factor experiments – three f-tests – two-factor ANOVA – Introduction to chi-square tests.

PREDICTIVE ANALYTICS - Linear least squares – implementation – goodness of fit – testing a linear model – weighted resampling. Regression using Stats Models – multiple regression – nonlinear relationships – logistic regression – estimating parameters – Time series analysis – moving averages – missing values – serial correlation – autocorrelation. Introduction to survival analysis.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60 PERIODS**

### **SAMPLE LIST OF EXPERIMENTS NUMBER OF PRACTICAL PERIODS: 30**

1. Download, install and explore the features of NumPy, SciPy, Jupyter, Statsmodels and Pandas packages, Scipy, Matplotlib, Pandas, statmodels, seaborn, plotly, bokeh
2. Working with Numpy arrays
3. Working with Pandas data frames
4. Reading data from text files, Excel and the web and exploring various commands for doing descriptive analytics on the Iris data set.
5. Use the diabetes data set from UCI and Pima Indians Diabetes data set for performing the following:
  - a. Univariate analysis: Frequency, Mean, Median, Mode, Variance, Standard Deviation, Skewness and Kurtosis.
  - b. Bivariate analysis: Linear and logistic regression modeling
  - c. Multiple Regression analysis
  - d. Also compare the results of the above analysis for the two data sets.
6. Apply and explore various plotting functions on UCI data sets.
  - a. Normal curves
6. Perform Z-test
8. Perform T-test
9. Perform ANOVA
10. Building and validating linear models
11. Building and validating logistic models
12. Time series analysis

### **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

CO1: Define the data science process Understand different types of data descriptions for data science process

Reinforcement Learning Theory – Markov Decision process – Monte Carlo methods – Temporal Difference methods – Value functions – Q learning – Deep Q-learning – Policy gradient methods – Model-based methods -Actor-Critic Methods

**UNIT V DEEP LEARNING IN AUTONOMOUS VEHICLES 6**  
Autonomous Vehicles Introduction – Imitation driving policy – Driving policy with ChauffeurNet – DL in Cloud

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>SAMPLE LIST OF EXPERIMENTS</b>	<b>NUMBER OF PRACTICAL PERIODS: 30</b>
1. Implement a feedforward neural network using TensorFlow to classify handwritten digits from the MNIST dataset.	
2. Design a convolutional neural network with appropriate filters and padding to classify images from the CIFAR-10 dataset.	
3. Compare the performance of different stride values in convolutional layers on a given image recognition task.	
4. Explore the impact of multilevel convolutions on improving the accuracy of a CNN for object detection in computer vision.	
5. Build a recurrent neural network model to generate text sequences and analyze its performance in language modeling.	
6. Develop a bidirectional RNN architecture for sentiment analysis on movie reviews dataset and compare it with a unidirectional RNN.	
7. Implement a deep reinforcement learning agent using Q-learning to solve a simple grid world problem.	
8. Evaluate the performance of Deep Q-learning algorithm on the CartPole environment in OpenAI Gym.	
9. Design an autonomous driving policy using imitation learning and assess its performance in a simulated environment.	
10. Investigate the feasibility of deploying a deep learning model for autonomous driving on cloud infrastructure, considering latency and scalability aspects.	

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01:Understanding the basic concepts of deep learning.
- C02:Emphasizing knowledge of Convolutional Neural Networks and applying CNN to its variants for suitable applications.
- C03:Understanding Recurrent Neural Networks to apply autoencoders and generative models for suitable applications.
- C04:Understanding deep reinforcement learning
- C05:Analyzing the key computations underlying deep learning and using them to build and train deep neural networks for various tasks.

**TEXTBOOKS:**

- 1. Eugene Charniak, "Introduction to Deep Learning," MIT Press, 2022.
- 2. Ivan Vasilev, Daniel Slater, Gianmario Spacagna, Peter Roelants, Valentino Zocca, "Python Deep Learning," Packt Publishing Ltd, 2019.

Course Code	<b>NATURAL LANGUAGE PROCESSING</b>	L	T	P	C
<b>AC3V43</b>		2	0	2	3

**COURSE OBJECTIVES:**

- To learn the mathematical foundations and basics of Natural Language Processing.
- To understand the text data processing technologies for processing text data.
- To understand the role of Information Retrieval and Information Extraction in Text Analytics.
- To acquire knowledge of text data analytics using language models.
- To learn about NLP Tools and real-time examples of NLP.

**UNIT I INTRODUCTION TO NATURAL LANGUAGE PROCESSING 6**

Natural Language Processing – Linguistic Background – Mathematical Foundations – Morphological Analysis – Tokenization – Stemming – Lemmatization – Boundary Determination.

**UNIT II TEXT DATA ANALYSIS 6**

Reading unstructured data – Representing text data – Part of speech tagging – Syntactic representation – Text similarity – WordNet-based similarity – Shallow parsing – Semantic representation.

**UNIT III INFORMATION RETRIEVAL AND EXTRACTION 6**

Information Retrieval: Design features of Information Retrieval Systems-Classical, Nonclassical, Alternative Models of Information Retrieval – Information extraction – Named Entity Recognition – Relation Identification - Template filling.

**UNIT IV LANGUAGE MODELLING 6**

Language model – Probabilistic Models – n-gram language models- Hidden Markov Model- Topic Modelling - Graph Models -Feature Selection and classifiers -Rule-based Classifiers - Maximum entropy classifier – Clustering-Word and Phrase-based Clustering.

**UNIT V NLP TOOLS AND APPLICATIONS 6**

Tools: Natural Language Toolkit, Apache OpenNLP. Applications of Text Analytics – Applications in social media - Life science - Legal Text – Visualization - Case studies.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

**SAMPLE LIST OF EXPERIMENTS NUMBER OF PRACTICAL PERIODS: 30**

1. Implement tokenization and compare the effectiveness of stemming versus lemmatization in improving text preprocessing for sentiment analysis.
2. Develop a part-of-speech tagging system using NLTK and evaluate its accuracy on a corpus of news articles.

3. Explore various text similarity metrics, including WordNet-based similarity, for clustering news headlines into topics.
4. Build an information retrieval system using classical and nonclassical models and compare their performance on a dataset of scientific papers.
5. Implement a named entity recognition model using Apache OpenNLP and assess its accuracy on legal text documents.
6. Investigate different approaches for relation identification in biomedical texts and evaluate their precision and recall.
7. Construct a language model using n-gram models and compare its performance with a hidden Markov model on a corpus of tweets.
8. Apply topic modeling techniques to extract themes from a collection of customer reviews and visualize the results using t-SNE.
9. Develop a rule-based classifier to categorize legal documents into different types and measure its accuracy against a maximum entropy classifier.
10. Utilize word and phrase-based clustering algorithms to identify patterns in social media conversations and analyze their implications for marketing strategies.

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

CO1: Understand the mathematical foundations and basics of Natural Language Processing.

CO2: Process text data at the syntactic and semantic level.

CO3: Extract key information from text data.

CO4: Analyze text content to provide predictions related to a specific domain using language processing.

CO5: Design an innovative application using NLP components.

**TEXTBOOKS:**

Course Code	<b>REINFORCEMENT LEARNING</b>	L	T	P	C
<b>AC3V44</b>		2	0	2	3

**COURSE OBJECTIVES:**

- Explore the historical development and interdisciplinary connections of Reinforcement Learning.
- Gain a deep understanding of Markov Decision Processes (MDPs)
- Focusing on iterative policy evaluation and iteration, and understanding the convergence properties.

- Understand Monte Carlo methods for model-free prediction and control. application in reinforcement learning tasks.
- Familiarize with function approximation methods and their applications in reinforcement learning.

**UNIT I INTRODUCTION 6**

Introduction- Origin and history of Reinforcement Learning research. Its connections with other related fields and with different branches of machine learning. Probability Primer - Brush up of Probability concepts - Axioms of probability, concepts of random variables, PMF, PDFs, CDFs, Expectation. Concepts of joint and multiple random variables, joint, conditional and marginal distributions. Correlation and independence.

**UNIT II MARKOV DECISION PROCESS 6**

Introduction to RL terminology, Markov property, Markov chains, Markov reward process (MRP). Introduction to and proof of Bellman equations for MRPs along with proof of existence of solution to Bellman equations in MRP. Introduction to Markov decision process (MDP), state and action value functions, Bellman expectation equations, optimality of value functions and policies, Bellman optimality equations.

**UNIT III PREDICTION AND CONTROL BY DYNAMIC PROGRAMING 6**

Overview of dynamic programming for MDP, definition and formulation of planning in MDPs, principle of optimality, iterative policy evaluation, policy iteration, value iteration, Banach fixed point theorem, proof of contraction mapping property of Bellman expectation and optimality operators, proof of convergence of policy evaluation and value iteration algorithms, DP extensions.

**UNIT IV MONTE CARLO METHODS FOR MODEL FREE PREDICTION AND CONTROL 6**

Overview of Monte Carlo methods for model-free RL, First visit and every visit Monte Carlo, Monte Carlo control, On-policy and off-policy learning, Importance sampling. **TD Methods** Incremental Monte Carlo Methods for Model Free Prediction, Overview TD(0), TD(1) and TD( $\lambda$ ), k-step estimators, unified view of DP, MC, and TD evaluation methods, TD Control methods - SARSA, Q-Learning and their variants.

**UNIT V FUNCTION APPROXIMATION METHODS 6**

Getting started with the function approximation methods, Revisiting risk minimization, gradient descent from Machine Learning, Gradient MC and Semi-gradient TD(0) algorithms, Eligibility trace for function approximation, Afterstates, Control with function approximation, Least squares, Experience replay in deep Q-Networks.

Policy Gradients - Getting started with policy gradient methods, Log-derivative trick, Naive REINFORCE algorithm, bias and variance in Reinforcement Learning, Reducing variance in policy gradient estimates, baselines, advantage function, actor-critic methods.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

**SAMPLE LIST OF EXPERIMENTS**

**NUMBER OF PRACTICAL PERIODS: 30**

1. Simulation of a Markov Chain: Simulate a simple Markov chain to demonstrate its properties and transitions between states.

2. Bellman Equation Implementation: Implement the Bellman equation for a Markov reward process in a simple environment to understand its application in reinforcement learning.
3. Policy Evaluation with Dynamic Programming: Implement policy evaluation using iterative methods like policy iteration or value iteration for a simple Markov decision process.
4. Monte Carlo Prediction: Implement first-visit Monte Carlo prediction to estimate state values in a grid world environment without a model.
5. Q-Learning Implementation: Implement the Q-learning algorithm for solving a simple grid world problem, demonstrating the exploration-exploitation trade-off.
6. Function Approximation with Linear Regression: Implement linear regression as a function approximation method in reinforcement learning to approximate state-action values.
7. Actor-Critic Method Implementation: Implement an actor-critic algorithm to learn policies and value functions concurrently, demonstrating the advantage of bootstrapping.
8. Gradient Descent in Function Approximation: Implement gradient descent for updating parameters in a function approximation method like neural networks for Q-value estimation.
9. Experience Replay in Deep Q-Networks: Implement experience replay in a deep Q-network (DQN) to improve learning efficiency and stability.
10. Policy Gradient Method Implementation: Implement a policy gradient method like REINFORCE to learn a policy in a simple environment, analyzing bias and variance in the estimates.

#### **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

C01:Attain comprehensive understanding of RL's historical evolution and interdisciplinary connections, alongside fundamental Probability concepts.

C02:Achieve deep comprehension of MDPs, emphasizing terminology, properties, and Bellman equations for optimal decision-making.

C03:Master Dynamic Programming techniques for MDP prediction and control tasks, understanding convergence properties.

C04:Gain thorough understanding of Monte Carlo methods for model-free RL, proficiently implementing First visit and every visit techniques.

C05:Familiarize with function approximation methods, gradient descent, eligibility traces, experience replay, policy gradient methods, and actor-critic architectures in RL applications.

Course Code	<b>BIG DATA ANALYTICS</b>	L	T	P	C
<b>AC3V45</b>		2	0	2	3

**COURSE OBJECTIVES:**

- To understand big data
- To learn and use NoSQL big data management.
- To learn MapReduce analytics using Hadoop and related tools.
- To work with map-reduce applications
- To understand the usage of Hadoop-related tools for Big Data Analytics

**UNIT I UNDERSTANDING BIG DATA 6**

Introduction to big data – convergence of key trends – unstructured data – industry examples of big data – web analytics – big data applications– big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics.

**UNIT II NOSQL DATA MANAGEMENT 6**

Introduction to NoSQL – aggregate data models – key-value and document data models – relationships – graph databases – schemaless databases – materialized views – distribution models – master-slave replication – consistency - Cassandra – Cassandra data model – Cassandra examples – Cassandra clients

**UNIT III MAP REDUCE APPLICATIONS 6**

MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats.

**UNIT IV BASICS OF HADOOP 6**

Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures - Cassandra – Hadoop integration.

**UNIT V HADOOP RELATED TOOLS 6**

Hbase – data model and implementations – Hbase clients – Hbase examples – praxis. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts.  
Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

**SAMPLE LIST OF EXPERIMENTS NUMBER OF PRACTICAL PERIODS: 30**

1. Downloading and installing Hadoop; Understanding different Hadoop modes. Startup scripts, Configuration files.
2. Hadoop Implementation of file management tasks, such as Adding files and directories, retrieving files and Deleting files
3. Implement of Matrix Multiplication with Hadoop Map Reduce

4. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
5. Installation of Hive along with practice examples.
6. Installation of HBase, Installing thrift along with Practice examples
7. Practice importing and exporting data from various databases.

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

On completion of this course, the students will be able to:

C01:Describe big data and use cases from selected business domains.

C02:Explain NoSQL big data management.

C03:Install, configure, and run Hadoop and HDFS.

C04:Perform map-reduce analytics using Hadoop.

C05:Use Hadoop-related tools such as HBase, Cassandra, Pig, and Hive for big data analytics.

### TEXTBOOKS:

Course Code	<b>GENERATIVE ARTIFICIAL INTELLIGENCE</b>	L	T	P	C
<b>AC3V46</b>		2	0	2	3

### COURSE OBJECTIVES:

The main objectives of this course are to:

- Understand the principles and theory behind generative AI.
- Gain practical experience in developing generative AI models.
- Analyze and evaluate the ethical and societal implications of generative AI.
- Apply generative AI techniques to real-world problems and domains.
- Keep up-to-date with the latest developments and trends in the field of generative AI.

### UNIT I

### INTRODUCTION TO GENERATIVE AI

6

Overview of Generative AI and its applications – Difference between generative and discriminative models – Historical perspective and key milestones – Ethical and societal implications.

<b>UNIT II</b>	<b>PROBABILITY AND STATISTICS FOR GENERATIVE AI</b>	<b>6</b>
Probability distributions and their role in generative models – Maximum Likelihood Estimation (MLE) – Bayesian Inference and Maximum a Posteriori (MAP) estimation – Generative models as probabilistic models		
<b>UNIT III</b>	<b>GENERATIVE MODEL</b>	<b>6</b>
Introduction to Autoencoders – Variational Autoencoders (VAE) – Generative Adversarial Networks (GAN) – Flow-based models – Practical implementation and hands-on exercises (using TensorFlow, PyTorch, Jupyter Notebook, Keras, etc).		
<b>UNIT IV</b>	<b>APPLICATIONS OF GENERATIVE AI</b>	<b>6</b>
Image generation and manipulation – Text generation and natural language processing – Anomaly detection and data augmentation – Style transfer and artistic applications – Real-world use cases (Art & Design, Medical Imaging, Content creation, Chatbots, Virtual Assistants, Cybersecurity, etc.) and industry examples. Guest Lectures by Industry Experts, and Researchers		
<b>UNIT V</b>	<b>EVALUATION AND ETHICAL CONSIDERATIONS</b>	<b>6</b>
Metrics for evaluating generative models (e.g., Inception Score, FID) – Ethical concerns in generative AI, including bias and fairness – Privacy and security considerations – Future trends and emerging technologies in Generative AI.		

**TOTAL NUMBER OF PERIODS INCLUDING LAB: 60**

<b>SAMPLE LIST OF EXPERIMENTS</b>	<b>NUMBER OF PRACTICAL PERIODS: 30</b>
<b>1. Image Generation with Generative Adversarial Networks (GANs)</b>	
<ul style="list-style-type: none"> <li>- Implement a basic GAN architecture using TensorFlow or PyTorch.</li> <li>- Train the GAN on a dataset of images (e.g., CIFAR-10, CelebA).</li> <li>- Experiment with different architectures (e.g., DCGAN, WGAN) and hyperparameters to observe their effects on image quality and convergence speed.</li> </ul>	
<b>2. Text Generation with Recurrent Neural Networks (RNNs)</b>	
<ul style="list-style-type: none"> <li>- Implement a character-level or word-level RNN using a framework like TensorFlow or PyTorch.</li> <li>- Train the RNN on a large corpus of text data (e.g., Shakespearean texts, Wikipedia articles).</li> <li>- Explore different RNN architectures (e.g., vanilla RNN, LSTM, GRU) and training techniques (e.g., teacher forcing, beam search) for text generation.</li> </ul>	
<b>3. Music Generation with Variational Autoencoders (VAEs)</b>	
<ul style="list-style-type: none"> <li>- Implement a VAE architecture using TensorFlow or PyTorch.</li> <li>- Train the VAE on a dataset of MIDI files or audio samples.</li> <li>- Investigate techniques for generating novel music sequences by sampling from the learned latent space of the VAE.</li> </ul>	
<b>4. Style Transfer with Neural Style Transfer Algorithms:</b>	
<ul style="list-style-type: none"> <li>- Implement neural style transfer algorithms such as Gatys et al.'s method or Johnson et al.'s method using TensorFlow or PyTorch.</li> <li>- Experiment with different content and style images to observe the transfer of artistic styles.</li> </ul>	
<b>5. Data Augmentation with Generative Models</b>	
<ul style="list-style-type: none"> <li>- Utilize generative models (e.g., GANs, VAEs) to augment training data for classification tasks.</li> <li>- Train a classifier (e.g., CNN) on a dataset augmented with generated samples and compare its performance with a classifier trained on the original dataset.</li> </ul>	

## **6. Video Generation with Generative Adversarial Networks (GANs)**

- Extend GAN architectures to generate video sequences.
- Train the GAN on a dataset of video clips (e.g., action recognition datasets, video game recordings).
- Evaluate the generated video sequences in terms of realism and diversity.

## **7. Anomaly Detection with Generative Models**

- Train a generative model (e.g., VAE) on a dataset containing only normal instances.
- Use the trained generative model to reconstruct instances from both normal and anomalous data.
- Devise anomaly detection techniques based on reconstruction errors or latent space distances.

## **8. Domain Adaptation with Generative Adversarial Networks (GANs)**

- Implement domain adaptation techniques using GANs to transfer knowledge from a labeled source domain to an unlabeled target domain.
- Train the GAN to generate target domain samples that are indistinguishable from source domain samples.
- Evaluate the effectiveness of the adapted model on the target domain tasks.

## **COURSE OUTCOMES:**

On completion of this course, the students will be able to:

CO1: Understand the fundamental principles and applications of Generative Artificial Intelligence and distinguish between generative and discriminative models.

CO2: Apply probability and statistics concepts to analyze and model data, with a focus on their role in generative models.

CO3: Implement and evaluate various generative models, including Autoencoders, Variational Autoencoders (VAE), and Generative Adversarial Networks (GANs).

CO4: Apply generative AI techniques to solve real-world problems, including image generation, text generation, and artistic applications.

CO5: Evaluate generative models using appropriate metrics and critically analyze the ethical implications, privacy concerns, and societal impact of generative AI technologies.

## VERTICAL 5: COMMUNICATION SYSTEMS

Course Code	<b>OPTICAL COMMUNICATION AND NETWORKS</b>	L	T	P	C
<b>AC3V51</b>		3	0	2	4

### **COURSE OBJECTIVES:**

- To Study About The Various Optical Fiber Modes, Configuration Of Optical Fibers
- To Study Transmission Characteristics Of Optical Fibers.
- To Learn About The Various Optical Sources, Detectors And Transmission Techniques.
- To Explore Various Idea About Optical Fiber Measurements And Various Coupling Techniques.
- To Enrich The Knowledge About Optical Communication Systems And Networks.

### **UNIT I INTRODUCTION TO OPTICAL FIBER COMMUNICATION 9**

Introduction - The General Systems - Advantages of Optical Fiber Communication- Ray Theory Transmission: Total Internal Reflection, Acceptance Angle, Numerical Aperture, Skew Rays - Electromagnetic Mode Theory for Optical Propagation: Modes in a Planar Guide, Phase and group velocity - Cylindrical Fiber: Step index fibers, Graded index fibers - Single mode fibers: Cutoff wavelength.

### **UNIT II TRANSMISSION CHARACTERISTICS OF OPTICAL FIBERS 9**

Attenuation - Material absorption losses in silica glass fibers: Intrinsic absorption, Extrinsic absorption - Linear scattering losses: Rayleigh Scattering, Mie Scattering -Nonlinear scattering losses: Stimulated Brillouin Scattering, Stimulated Raman Scattering - Fiber Bend Loss - Dispersion- Chromatic dispersion: Material dispersion, Waveguide dispersion- Intermodal dispersion : Multimode step index fiber, Multimode graded index fiber.

### **UNIT III OPTICAL SOURCES AND OPTICAL DETECTORS 9**

The laser : Introduction - Basic concepts: Absorption and emission of radiation, Population inversion , Optical feedback and laser oscillation, Threshold condition for laser oscillation- Optical emission from semiconductors: The PN junction, Spontaneous emission, Carrier recombination, Stimulated emission and lasing, Hetero junctions- LED: Introduction- Power and Efficiency - LED structures: Planar LED, Dome LED, Surface emitter LED, Edge emitter LED- LED Characteristics. Optical Detectors: Introduction, Optical Detection Principles, Quantum Efficiency, Resposivity, P-N Photodiode, P-I-N Photo Diode and Avalanche Photodiode.

### **UNIT IV OPTICAL FIBER MEASUREMENTS 9**

Introduction- Total Fiber Attenuation Measurement, Fiber Dispersion Measurements In Time Domain and Frequency Domain, Fiber Cut off Wavelength Measurements, Numerical Aperture Measurements. Fiber Diameter Measurements, Reflectance And Optical Return Loss, Field Measurements

### **UNIT V OPTICAL NETWORKS 9**

Introduction- Optical Network Concepts: Optical Networking Terminology, Optical Network Node And Switching Elements, Wavelength Division Multiplexed Networks, Public Telecommunications Network Overview- Optical Network Transmission Modes, Layers And Protocols: Synchronous Networks, Asynchronous Transfer Mode, Open System Interconnection Reference Model, Optical Transport Network, Internet Protocol- Wavelength Routing Networks: Routing And Wavelength Assignment- Optical Switching Networks: Optical Circuit Switched Networks, Optical Packet Switched Networks, Multiprotocol Label Switching, Optical Burst Switching Networks- Optical Network Deployment : Long Haul Networks, Metropolitan area networks, Access networks, Local Area Networks- Optical Ethernet: Network protection, restoration and survivability.

**TOTAL: 45 PERIODS**

**PRACTICAL EXERCISES:**

**30PERIODS**

1. Study of setting up an analog and digital link using optical fibre
2. Measurement of numerical aperture of the plastic fiber provided using 660 nm wavelength.
3. Study of Frequency modulation and demodulation using Optical fiber.
4. Study of pulse width modulation and demodulation technique using Optical fiber
5. Study of Characteristics of LASER diode.
6. Study of I-V Characteristics of Fiber optic LED and Photodetector.
7. Measurement of bending loss and propagation loss in the optical fiber cable.
8. Setting up Fiber Optics voice link using Frequency Modulation.

**Course Outcomes:**

Upon Completion of the course the students will be able to

CO1: Realize Basic Elements In Optical Fibers, Different Modes And Configurations.

CO2: Analyze the Transmission Characteristics Associated With Dispersion And Polarization Techniques

CO3: Design Optical Sources And Detectors With Their Use In Optical Communication System.

CO4: Construct Fiber Optic Receiver Systems, Measurements and Techniques.

CO5: Design Optical Communication Systems And Its Networks.

Course Code	<b>AD-HOC AND WIRELESS SENSOR NETWORKS</b>	L	T	P	C
<b>AC3V52</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To implement Ad hoc and Wireless Sensor Networks effectively.
- To apply appropriate routing algorithms considering network and user requirements.
- To analyze and address issues related to physical and MAC layer protocols.
- To mitigate transport layer and security vulnerabilities in network design.
- To develop basic modules and utilize operating systems for Wireless Sensor Networks.

**UNIT I AD HOC NETWORKS INTRODUCTION AND ROUTING PROTOCOLS 9**

Elements of Ad hoc Wireless Networks, Issues in Ad hoc wireless networks, Example commercial applications of Ad hoc networking, Ad hoc wireless Internet, Issues in Designing a

Course Code	<b>5G TECHNOLOGIES</b>			
<b>AC3V53</b>	L	T	P	C
	3	0	0	3

**COURSE OBJECTIVES:**

- To gain deep knowledge of 5G evolution, spectrum needs, and use cases.
- To develop expertise in 5G RAN architecture, protocols, and physical procedures.
- To differentiate traditional RAN from Open RAN and understand their implications.
- To acquire practical skills in managing 5G network interference, mobility, and quality-of-service.
- To prepare for future advancements in wireless communication technologies beyond 5G.

**UNIT I EVOLUTION OF WIRELESS COMMUNICATION AND CELLULAR TECHNOLOGIES 9**

Historical background, Frequency Reuse and the Cellular Concept Mobile Radio Propagation, Environment Co- Channel Interference and Noise. 5G RADIO SPECTRUM: 5G spectrum landscape and requirements, Spectrum access modes and sharing scenarios, 5G spectrum technologies. 5G USE CASES AND SYSTEM CONCEPT: Use cases and requirements, 5G system concept

**UNIT II 5G RAN OVERVIEW 9**

Overall System Architecture, frame structure, physical channels and signals, physical layer procedures (MIMO, Power control, link adaptation, beam forming, massive MIMO). Radio Interface Architecture:5G architecture options, core network architecture, RAN architecture

**UNIT II 5G OPEN RAN OVERVIEW 9**

RAN to Open RAN Transition-Benefits- Overall Architecture of Open RAN-3GPP vs open RAN Functions/Nodes-5G Service-based Architecture- Implications of Open RAN for Internet of Things and 6G- AI-enabled RAN and Open RAN Interfaces- Use Case Details and Requirements

**UNIT IV 5G RADIO PROTOCOLS 9**

Details of 5G Radio Protocol layers: RLC, MAC, PDCP, RRC layers Interfaces of 5G Network (Ng, Xn, F1 interfaces), Quality-of-Service Handling, Radio Protocol Architecture, User-Plane Protocols, Control-Plane Protocols

**UNIT V MOBILITY AND HANDOFF MANAGEMENT IN 5G 9**

Network deployment types, Interference management in 5G, Mobility management in 5G.

**TOTAL:45 PERIODS**

**PRACTICAL EXERCISES**

**30 PERIODS**

1.5G Communications Link Analysis with Ray Tracing using MATLAB

2. Wireless Connectivity in the 5G Era for WLAN using MATLAB
3. MIMO Wireless System Design for 5G using MATLAB
4. 5G Waveforms generation using MATLAB
5. 5G Beamforming Design
6. Frame Structure of 5G technology
7. Numerology in 5G
8. Spatial Multiplexing and Hybrid Beam forming for 5G Wireless Communications
9. MATLAB Project on Massive MIMO System Implementation with Perfect CSI
10. Case Study: Factors affecting deployment of 5G in Indian scenario

**Course Outcomes:**

At the end of the course, students will demonstrate the following specific abilities:

- CO1: Ability to know about the history and evolution of 5G
- CO2: Able to know about the radio network architectures.
- CO3 : Able to know about the open radio network architectures.
- CO4: Proficiency in network layers and network slicing.
- CO5: Expertise in 5G network deployment types

**Text Books:**

Course Code	<b>ADVANCED 5G TECHNIQUES</b>	L	T	P	C
<b>AC3V54</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To learn about the registration management and reach ability procedures.
- To study the session, security and hand over procedures
- To learn about use cases.
- To gain knowledge about 5G deployment aspects
- To study about 5G performance

**UNIT I                      REGISTRATION AND MOBILITY MANAGEMENT PROCEDURES                      9**

Registration Management procedures-General Registration, Registration with AMF re-

allocation, Deregistration procedures -UE-initiated Deregistration, Network-initiated Deregistration, Service Request procedures - UE Triggered Service Request, Network Triggered Service Request, UE Configuration Update-UE Configuration Update procedure for access and mobility management related , UE Configuration Update procedure for transparent UE Policy delivery, Reachability procedures-UE Reachability Notification Request procedure , UE Activity Notification procedure.

**UNIT II                      Session, Security and Handover management procedures                      9**

Session Management procedures- PDU Session Establishment, PDU Session Modification, PDU Session Release. User Profile management procedures, ME Identity check procedure, Security procedures, Handover procedures – Xnbasedinter NG – RAN handover – Xnbasedinter NG - RAN handover without User Plane function re-allocation, Xnbasedinter NG - RAN handover with insertion of intermediate UPF, Xnbasedinter NG-RAN handover with re-allocation of intermediate UPF

**UNIT III    Use Cases    9**

Terminology to be used in connection with the use cases, Key Performance Indicators, Key Quality Indicators (KQIs), Services and service categories, Detailed characteristics, requirements, and KPIs of the use cases- Assisted, cooperative and tele-operated driving, Time-critical factory processes and logistics optimization (industry and smart airports), Non time-critical processes and logistics (factories and smart cities), Long range connectivity in remote areas with smart farming application, Outdoor hotspots and smart offices with AR/VR and media applications, Live Event Experience, Health/wellness monitoring, Smart grid, connected lighting and energy infrastructure, Ad-hoc airborne platforms for disasters and emergencies

**UNIT IV    5G Deployment Aspects    9**

Introduction, Spectrum Resources, Spectrum Reframing and Dynamic Spectrum Sharing, Network Density, Mobile Data Traffic Growth, Mobile Data Volume, Traffic Asymmetry Base Station Site Solution, Electromagnetic Field (EMF) Considerations, Network Synchronization and Coordination Requirements, Main Interference Scenarios in TDD System, TDD Frame Configuration Options, Cell Size and Random Access Channel, Guard Period and Safety Zone, Intra-Frequency Operation, Inter-Operator Synchronization

**UNIT V    5G Performance    9**

Introduction Peak Data Rates, Practical Data Rates, Latency, Link Budgets, Massive MIMO and Beamforming Algorithms, Packet Scheduling Algorithms, Spectral Efficiency and Capacity, Network Energy Efficiency, Traffic and Device Density, Ultra-Reliability for Mission-Critical Communication

**TOTAL:45PERIODS**

**Course Outcomes:**

At the end of the course, students will demonstrate the following specific abilities:

- C01: Ability to know about the registration management and reachability procedures.
- C02: Able to know about the session, security and handover procedures
- C03: Mastery in 5G use cases.
- C04: Proficiency in 5G deployment aspects
- C05: Expertise in 5G performance

Course Code	<b>UNDERWATER COMMUNICATION</b>	L	T	P	C
<b>AC3V55</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To learn about fiber optic communication for underwater application
- To learn underwater MI communication and sensor networking
- To understand underwater acoustic communication
- To understand the challenges in underwater communication
- To learn underwater cables and handling system for various application

**UNIT I UNDERWATER FIBRE OPTICS COMMUNICATION 9**

Basics of Fibre Optics communication: Working Principle, Single Mode, Multi-Mode, Effect on Fibre bending, Standard FO Connectors, Cable Requirement for Underwater Application, Cable Characteristics, Basic design for Electro-Optical(E-O) Underwater Cable, Handling system for E-O cables, Optical slip ring and its application, An insight into Fibre Optic Telemetry

**UNIT II UNDERWATER OPTICAL COMMUNICATION 9**

Introduction, Classification of Underwater Wireless Optical Communication Links, Underwater Optical Communication (UWOC) System: Modulation, Coding, Light Source Technology, Common Lasers in UWOC, Signal Detectors and its merits and demerits, Alignment and Compensation, UWC Network, Absorption and Scattering Losses, UWOC Channel Modeling, UWOC Link Turbulence, Noise in the UWOC Channel. UWOC Networks.

**UNIT III UNDERWATER MI COMMUNICATION & SENSOR NETWORKS 9**

Fundamental Principles of Magnetic Induction, Basic Element of Magnetism, Magnetic Induction, Lenz's Law, Mutual and Self Induction, Inductive and Capacitive Reactance of the coil, MI

Communication System: MI Coil, Matching Network, Communication Block: MI Wireless Sensor Networks: UW sensor network Application and Its Architecture, Localization, Medium Access protocols, Routing Protocols, Cross-layer Protocols, Recent trend on MI communication.

**UNIT IV BASIC PRINCIPLES OF UNDERWATER ACOUSTIC COMMUNICATION 9**

Ocean Acoustic environment; Measuring sound levels and relevant units; Sound propagation in the ocean – sound velocity profiles in the deep water and shallow water Speed of underwater sound, Underwater Sound Transmission Loss, Acoustic Field Model: Ray Theory Model, Structure and Performance of UWAC System: Basic Structure of UWAC System, Performance Indicators of UWAC System, Characteristics of the UWA Channel.

**UNIT V UNDERWATER ACOUSTIC NETWORK TECHNOLOGY 9**

Basics on Underwater Acoustic Modem and its construction, Bandwidth and its limitations, Characteristics of UWA Network, Topology of UWA Network, Network Protocol Architecture of UWA Network, UWAC Challenges and Research Trends, Comparison study on RF, Optical and Acoustic Communication in Underwater. Underwater telephone, Acoustic Positioning System, Underwater beacon.

**TOTAL: 45PERIODS**

**Course Outcomes:**

At the end of the course, students will demonstrate the following specific abilities:

- CO1: To get an explore to different underwater communication system
- CO2: Design of MI coil for underwater communication
- CO3: To know the important of underwater communication and its challenges
- CO4: To understand the strength of Underwater acoustic communication
- CO5: To understand the sensor network concepts and its application

**Text Books:**

2. L.M. Brekhovskikh and Yu. P. Lysanov, Fundamentals of ocean acoustics, Third Edition, Springer,2003
3. Robert J Urick, Principles of underwater sound, Third Edition, Peninsula Publishing,2013
4. Rahul Sharma, Deep Sea Mining Handbook, First Edition, Springer,2017

Course Code	<b>ADVANCED WIRELESS COMMUNICATION TECHNIQUES</b>	L	T	P	C
<b>AC3V56</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To understand the evolving paradigm of cooperative communication
- To understand concepts related to green wireless communication
- To enable the student to understand the different power saving strategies and energy efficient signal, system and network design.
- To expose the student to the energy saving techniques adopted in existing wireless components

- To apply and analyse access techniques for green radio networks

**UNIT I COOPERATIVE COMMUNICATIONS AND GREEN CONCEPTS 9**

Network architectures and research issues in cooperative cellular wireless networks ; Cooperative communications in OFDM and MIMO cellular relay networks: issues and approaches; Fundamental trade-offs on the design of green radio networks, Green modulation and coding schemes

**UNIT II COOPERATIVE TECHNIQUES 9**

Cooperative techniques for energy efficiency, Cooperative base station techniques for cellular wireless networks; Turbo base stations; Antenna architectures for cooperation; Cooperative communications in 3GPP LTE-Advanced, Partial information relaying and Coordinated multi-point transmission in LTE-Advanced.

**UNIT III RELAY-BASED COOPERATIVE CELLULAR NETWORKS 9**

Distributed space-time block codes ; Collaborative relaying in downlink cellular systems ; Radio resource optimization; Adaptive resource allocation ; Cross-layer scheduling design for cooperative wireless two-way relay networks ; Network coding in relay-based networks.

**UNIT IV GREEN RADIO NETWORKS 9**

Base Station Power-Management Techniques- Opportunistic spectrum and load management, Energy-saving techniques in cellular wireless base stations , Power-management for base stations in smart grid environment, Cooperative multi cell processing techniques for energy-efficient cellular wireless communications.

**UNIT V ACCESS TECHNIQUES FOR GREEN RADIO NETWORKS 9**

Cross-layer design of adaptive packet scheduling for green radio networks; Energy-efficient relaying for cooperative cellular wireless networks ; Energy performance in TDD-CDMA multihop cellular networks ; Resource allocation for green communication in relay-based cellular networks ; Green Radio Test-Beds and Standardization Activities

**TOTAL: 45 PERIODS**

**Course Outcomes:**

Upon Completion of the course the students will be able to

CO1: Appreciate the necessity and design aspects of cooperative communication.

CO2: Understand the necessity and design aspects of green wireless communication.

CO3: Develop new techniques in wireless communication.

CO4: Demonstrate feasibility using mathematical models and simulation tools.

CO5: Assess the impact of green engineering solutions in global, economic, environmental, and societal contexts.

**Text Books:**

1. Ekram Hossain, Dong In Kim, Vijay K. Bhargava , “Cooperative Cellular Wireless Networks”,Cambridge University Press, 2023.

2. Ekram Hossain, Vijay K. Bhargava(Editor), Gerhard P. Fettweis (Editor), “Green Radio Communication Networks”, Cambridge University Press, 2022.

Scenario - Suburban Scenario - Minimum Per-Terminal Throughput Performance –Additional Observations -Comparison of Power Control Policies

**TOTAL: 45 PERIODS**

**Course Outcomes:**

Upon Completion of the course the students will be able to

- CO1: Understand and explain massive MIMO networks.
- CO2: Analyze massive MIMO propagation channels and their capacity bounds
- CO3: Examine channel estimation techniques for single cell system.
- CO4: Analyze channel estimation techniques for multi cell system.
- CO5: Explain the concepts underlining the deployment of single and multicell massive

**Text Books:**

1. Thomas L. Marzetta, Erik G. Larsson, Hong Yang, Hien Quoc Ngo, “Fundamentals of Massive MIMO”, Cambridge University Press 2022. (UNITS II-V)
2. Emil Björnson, Jakob Hoydis and Luca Sanguinetti (2023), “Massive MIMO Networks: Spectral, Energy, and Hardware Efficiency”, Foundations and Trends. (UNIT I)

2. Leibo Liu, Guiqiang Peng, Shaojun Wei, “Massive MIMO Detection Algorithm and VLSI Architecture”, Springer 2023.
3. Shahid Mumtaz, Jonathan Rodriguez, Linglong Dai, “mmWave Massive MIMO A Paradigm for 5G”, Elsevier, 2022

Course Code	<b>ULTRA WIDEBAND COMMUNICATIONS</b>	L	T	P	C
<b>AC3V62</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To give fundamental concepts related to Ultra wide band
- To understand the channel model in UWB
- To understand the concept of Signal processing in UWB.
- To understand the antenna design requirements and types of antennas for UWB
- To acquire knowledge about UWB applications and regulations.

**UNIT I** **INTRODUCTION TO UWB** **9**  
 History, Definition, FCC Mask, UWB features, Benefits and challenges, UWB Interference: IEEE 802.11.a Interference, Signal to Interference ratio calculation, Interference with other wireless services.

**UNIT II** **UWB TECHNOLOGIES AND CHANNEL MODELS** **9**  
 Impulse Radio, Pulsed Multiband, Multiband OFDM, features : Complexity, Power Consumption, Security and achievable data rate. MIMO Multiband OFDM, Differential multiband OFDM, Performance characterization, Ultra Wide Band Wireless Channels Channel model: Impulse

Response Modeling of UWB Wireless Channels, IEEE UWB channel model, Path loss, Delay profiles, Time and frequency modeling.

**UNIT III** **UWB SIGNAL PROCESSING** **9**

Data Modulation schemes, UWB Multiple Access Modulation, BER, Rake Receiver, TransmitReference (T-R) Technique, UWB Range- Data Rate Performance, UWB Channel Capacity, UWB Wireless Locationing: Position Locationing Methods, Time of Arrival Estimation, NLOS Location Error , Locationing with OFDM

**UNIT IV** **UWB ANTENNAS** **9**

Antenna Requirements, Radiation Mechanism of the UWB Antennas, Types of Broad band antennas, Parameters, Analysis of UWB Antennas, Link Budget for UWB System. Design examples of broad band UWB antennas.

**UNIT V** **UWB APPLICATIONS AND REGULATIONS** **9**

Ultra wideband receiver architecture, Wireless Ad hoc Networking, UWB Wireless Sensor, RFID, Consumer Electronics and Personal, Asset Location, Medical applications, UWB Regulation and standards in various countries , UWB Regulation in ITU, IEEE Standardization

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

C01: Understand the basic concepts of UWB

C02: Understand the basic concepts of UWB technologies.

C03: Assess the performance of UWB channels.

C04: Apply the UWB signal processing

C05: Design UWB antenna for various applications.

Course Code	<b>HIGH PERFORMANCE COMPUTING</b>	L	T	P	C
<b>AC3V64</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To learn the fundamental concepts of High Performance Computational programming
- To study the basics of the core of high end computers and parallelization.
- To learn the concept of shared and distributed parallel computers
- To apply the principle of heterogeneous parallel computing.
- To design GPU/FPGA programs for Deep Learning frameworks.

**UNIT I HIGH-END COMPUTER SYSTEMS 9**

High-End Computer Systems: Memory Hierarchies, Multi-core Processors: Homogeneous and Heterogeneous, Shared-memory Symmetric Multiprocessors, Vector Computers, Distributed Memory Computers, Supercomputers and Petascale Systems, Application Accelerators/ Reconfigurable Computing, Novel computers: Stream, multithreaded, and purpose

**UNIT II MODERN PROCESSORS 9**

Modern processors - pipelining-super scalarity-multicore processors- Multithreaded processors- vector processors- basic optimization techniques for serial code - taxonomy of parallel computing paradigms- shared memory computers- distributed-memory computers- Hierarchical Systems-networks- basics of parallelization - data parallelism - function parallelism- Parallel scalability-shared memory parallel programming with OpenMp - Distributed-memory parallel programming with MPI.

**UNIT III PARALLEL COMPUTERS 9**

Taxonomy of parallel computing paradigms- Shared memory computers- Cache coherence-UMA - ccNUMA- Distributed-memory computers- Hierarchical systems- Networks- Basic performance characteristics- Buses- Switched and fat- tree networks- Mesh networks- Hybrids - Basics of parallelization - Data Parallelism - Function Parallelism- Parallel Scalability- Factors that limit parallel execution- Scalability metrics- Simple scalability laws- parallel efficiency - serial performance Vs Strong scalability- Refined performance models

**UNIT IV HETEROGENEOUS PARALLEL COMPUTING 9**

Heterogeneous parallel computing; Accelerators, GPUs, CUDA, Overview of CUDA C; threads, blocks and grids, warps, different GPU memories, CUDA Kernels, Operations in Deep Learning and their implementation on CUDA. Designing High Performance Systems for Accelerated Machine Learning and Deep Learning Workloads. Deep Learning Software: Setting up Application Environment for Deep Learning and HPC workloads using Container Platform like Docker. Introduction to PyTorch, Tensor Flow

**UNIT V DEEP LEARNING ON FPGA 9**

Deep learning on FPGA: Introduction to FPGAs, Architecture of FPGAs, Implementation of complex digital computations with FPGAs, FPGAs for AI, the challenges of using GPUs for deep learning, FPGAs vs. GPUs for Deep Learning, Different deep learning architectures for FPGAs, Deep Learning Accelerator scaling on FPGA Creating ASICs for AI. Pros and cons of using FPGAs for AI workload acceleration.

**TOTAL: 45 PERIODS****COURSE OUTCOMES:**

On completion of this course, the students will be able to:

CO1: Understanding the basic concepts of computational programming and its applications

CO2: Understanding the core of high end computers, components and their capacities

CO3: Understand the need for parallel algorithms and learn on various parallel programming Applications

CO4: To apply the need for the concepts of heterogeneous parallel computing programming

CO3: Analyzing the concept of GPU/FPGA programs for Deep Learning frameworks.

Course Code	<b>MILLIMETER WAVE COMMUNICATION</b>	L	T	P	C
<b>AC3V65</b>		3	0	0	3

**COURSE OBJECTIVES:**

- To understand the characteristics and propagation effects of mm wave communications.
- To study mm wave generation, amplification devices, and analog components.
- To learn modulation techniques and transceiver architectures for mm wave systems.
- To explore massive MIMO communications and multiple antenna implementations.
- To design and optimize antennas for mm wave systems.

**UNIT - I INTRODUCTION 9**

Millimeter wave characteristics- millimeter wave wireless, implementation challenges, Radio wave propagation for mm wave: Large scale propagation channel effects, small scale channel effects, Outdoor and Indoor channel models, Emerging applications of millimeter wave communications.

**UNIT - II mm WAVE DEVICES AND CIRCUITS 9**

Millimeter wave generation and amplification: Peniotrons, Ubitrons, Gyrotrons and Free electron lasers. HEMT, models for mm wave Transistors, transistor configurations, Analog mm wave components: Amplifiers, Mixers, VCO, PLL. Metrics for analog mm wave devices, Consumption factor theory, Trends and architectures for mm wave wireless, ADC's and DAC's.

**UNIT - III mm WAVE COMMUNICATION SYSTEMS 9**

Modulations for millimeter wave communications: OOK, PSK, FSK, QAM, OFDM, Millimeter wave link budget, Transceiver architecture, Transceiver without mixer, Receiver without Oscillator, Millimeter wave calibration, production and manufacture, Millimeter wave design considerations.

**UNIT - IV mm WAVE MIMO SYSTEMS 9**

Massive MIMO Communications, Spatial diversity of Antenna Arrays, Multiple Antennas, Multiple Transceivers, Noise coupling in MIMO system, Potential benefits for mm wave systems, Spatial, Temporal and Frequency diversity, Dynamic spatial, frequency and modulation allocation.

**UNIT - V ANTENNAS FOR MM WAVE SYSTEMS 9**

Antenna beamwidth, polarization, advanced beam steering and beam forming, mm wave design consideration, On-chip and In package mm wave antennas, Techniques to improve gain of on-chip antennas, Implementation for mm wave in adaptive antenna arrays, Device to Device communications over 5G systems, Design techniques of 5G mobile.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

On completion of this course, the students will be able to:

- C01: Describe and analyze mm wave characteristics and propagation effects.
- C02: Explain and model mm wave generation and analog components.
- C03: Apply modulation schemes and design transceiver architectures.
- C04: Design and evaluate massive MIMO systems with multiple antennas.

CO5: Implement and optimize antennas for mm wave systems.

**TEXTBOOKS:**

1. K.C. Huang, Z. Wang, "Millimeter Wave Communication Systems", Wiley-IEEE Press, March 2011.
2. Robert W. Heath, Robert C. Daniel, James N. Theodore S. Rappaport, Murdock, "Millimeter Wave Wireless Communication", Prentice Hall, 2014.

Course Code	<b>HIGH SPEED SWITCHING AND NETWORKING</b>	L	T	P	C
<b>AC3V66</b>		3	0	0	3

**Course Objectives**

- To explore the various space division switches
- To enable the various network performance analysis
- To get the clear idea about the various multimedia application
- To get a clear idea about the traffic and Queuing systems.
- Interpret the basics of security management and the various attacks & its countermeasures

**UNIT I SWITCHING ARCHITECTURES**

**9**

Shared medium switches – Shared memory switches – Space division switches – Cross bar based switching architecture – Input queued, Output queued and Combined input-output queued switches – Non blocking and blocking cross bar switches – Banyan networks – Batcher Banyan networks – Optical switches – Unbuffered and buffered switches – Buffering strategies – Optical packet switches and Optical burst switches – MEMS optical switches

**UNIT II NETWORK PERFORMANCE ANALYSIS**

**9**

Objectives and requirements for Quality of Service (QoS) in high performance networks. Architecture of high performance networks (HPN), design issues, protocols for HPN, VHF backbone networks, virtual interface architectures, virtual interface for networking, High-speed switching and routing - internet and PSTN IP switching techniques, SRP protocols, SRP authentication, and key exchange, comparison of TCP/IP, FTP, TELNET, queuing systems, network modeling as a graph

**UNIT III MULTIMEDIA NETWORKING APPLICATIONS**

**9**

Streaming stored Audio and Video, Best effort service, protocols for real time interactive applications, Beyond best effort, scheduling and policing mechanism, integrated services, RSVP-differentiated services.

**UNIT IV PACKET QUEUES AND DELAY ANALYSIS**

**9**

Littles theorem, Birth and Death process, queueing discipline- Control & stability -, Markovian FIFO queueing system, Non-markovian - PollaczekKhinchin formula and M/G/1, M/D/1, self-similar models and Batch-arrival model, Networks of Queues – Burkes theorem and Jackson Theorem.

**UNIT V NETWORK SECURITY AND MANAGEMENT**

**9**

Principles of cryptography – Elliptic-AES Authentication – integrity – key distribution and certification– Access control and: fire walls – DoS-attacks and countermeasures – security in

many layers. Infrastructure for network management – The internet standard management framework – SMI, MIB, SNMP, Security and administration – ASN.1.

**Total: 45 Periods**

**Course Outcomes:**

Upon completion the students will be able to

CO1: Understand the fundamental concepts of the switching architecture involved in various switching types

CO2: Interpret the basics of various protocols and QOS in the network performance

CO3: Understand the various types of multimedia networking application

CO4: Recognize the concepts of various analysis method involved in the processing

CO5: Understand fundamental issues involved in providing the security as well as the management.

10	CZ3704	Operational Technology Security

## OPEN ELECTIVES- I

Course Code	<b>BIOMEDICAL INSTRUMENTATION</b>	L	T	P	C
BM3601		3	0	0	3

### **COURSE OBJECTIVES:**

- To understand the origin of various biological signals and electrode configurations specific to bio-potential measurements.
- To understand the characteristics of Bio signals.
- To understand the design of bio amplifiers
- To explain the different techniques used for measurement of non-electrical bio parameters
- To explain the biochemical measurement techniques as applicable for diagnosis and treatment.

### **UNIT I Electrode Configurations 9**

Bio signals characteristics – Origin of bio potential and its propagation. Frequency and amplitude ranges. Electrode configurations: Electrode-electrolyte interface, electrode–skin interface impedance, polarization effects of electrode – non-polarizable electrodes. Unipolar and bipolar configuration, classification of electrodes.

### **UNIT II Biosignal Characteristics 9**

Bio signals characteristics – ECG-frequency and amplitude ranges – Einthoven’s triangle, standard 12 lead system. EEG - EEG – 10-20 electrode system, unipolar, bipolar and average mode. EMG– unipolar and bipolar mode. EMG - Electrode configuration -unipolar and bipolar mode. ECG, EEG, EMG, ERG, EOG, GSR, PCG.

### **UNIT III Bioamplifiers 9**

Need for bio-amplifier - Differential bio-amplifier – Single ended amplifier - Band pass filtering, isolation amplifiers – transformer and optical isolation - isolated DC amplifier and AC carrier amplifier. Chopper amplifier. Power line interference, Electrical Isolation (optical and electrical)

### **UNIT IV Measurement of Bio Signals 9**

Temperature, respiration rate and pulse rate measurements. Blood Pressure - indirect methods: Auscultatory methods, oscillometric method, direct methods: electronic manometer, Pressure amplifiers - systolic, diastolic, mean detector circuit. Blood flow and cardiac output measurement: Indicator dilution, thermal dilution and dye dilution method, Electromagnetic and ultrasound blood flow measurements

### **UNIT V Biochemical Measurements 9**

Biochemical sensors - pH, pO<sub>2</sub> and pCO<sub>2</sub>, Ion selective Field effect Transistor (ISFET), Immunologically sensitive FET (IMFET), Blood glucose sensors. Blood gas analyzers, Colorimeter, flame photometer, spectrophotometer, blood cell counter, auto analyzer. Safety of Biomedical Instruments

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:** On successful completion of this course, the student will be able to

- C01: Illustrate the origin and characteristics of various biological
- C02: Gain knowledge on characteristics of bio signals
- C03: Gain knowledge on various amplifiers involved in monitoring and transmission of biosignals.
- C04: Explain the different measurement techniques for non-electrical bio-parameters
- C05: Explain the biochemical measurement techniques as applicable for diagnosis and further treatment

**TEXT BOOKS:**

- Leslie Cromwell, “Biomedical Instrumentation and measurement”, 2nd edition, Prentice hall of India, New Delhi, 2023.

Course Code	<b>NANOTECHNOLOGY</b>	L	T	P	C
ME3605		3	0	0	3

**COURSE OBJECTIVES:**

- The course emphasis on the molecular safe assembly and materials for polymer electronics

**UNIT I Introduction 9**

Historical Perspectives, Lessons from Nature, Engineering the Functions, Tuning the functions, Multiscale Modeling and Computation, Classification of Functional Materials, Functional Diversity of Materials, Hybrid Materials, Technological Relevance, Societal Impact.

**UNIT II Synthesis Of Nanomaterials 9**

Bottom up and Top-down approach for obtaining nano materials - Precipitation methods – sol gel technique – high energy ball milling, CVD and PVD methods, gas phase condensation, magnetron sputtering and laser deposition methods – laser ablation, sputtering.

**UNIT III Nano Composites 9**

Definition- importance of nanocomposites- nano composite materials-classification of composites metal/metal oxides, metal-polymer- thermoplastic based, thermoset based and elastomer based influence of size, shape and role of interface in composites applications.

**UNIT IV Nano Structures And Characterization Techniques 9**

Classifications of nanomaterials - Zero dimensional, one-dimensional and two-dimensional nanostructures- Kinetics in nanostructured materials- multilayer thin films and superlattice-

clusters of metals, semiconductors and nanocomposites. Spectroscopic techniques, Diffraction methods, thermal analysis method, BET analysis method.

**UNIT V Applications Of Nano Materials**

**9**

Overview of nanomaterials properties and their applications, nano painting, nano coating, nanomaterials for renewable energy, Molecular Electronics and Nanoelectronics – Nanobots Biological Applications. Emerging technologies for environmental applications- Practice of nanoparticles for environmental remediation and water treatment.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:** On successful completion of this course, the student will be able to

CO1: Understand the basic properties such as structural, physical, chemical properties of nanomaterials and their applications

CO2: Able to acquire knowledge about the different types of nano material synthesis

CO3: Describes the shape, size, structure of composite nano materials and their interference.

CO4: Understand the different characterization techniques for nanomaterials

CO5: Develop a deeper knowledge in the application of nanomaterials in different fields.

Course Code	<b>Space Engineering</b>	L	T	P	C
EE3603		3	0	0	3

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- Use the standard atmosphere tables and equations.
- Find lift and drag coefficient data from NACA plots.
- Apply the concept of static stability to flight vehicles.
- Describe the concepts of stress, strain, Young’s modulus, Poisson’s ratio, yield strength.
- Demonstrate a basic knowledge of dynamics relevant to orbital mechanics.

### Course Description

This course provides an introduction to key concepts in aerospace engineering, covering the fundamental principles of aerodynamics, aircraft performance, propulsion, aircraft stability, structural theory, and space applications. Students will learn about the history of aviation, standard atmosphere, lift generation, aircraft types, drag calculations, aircraft stability, materials science, space research history, spacecraft trajectories, orbital mechanics, and laws governing motion in space.

### Prerequisites

- Basic knowledge of physics, including mechanics and thermodynamics.
- Familiarity with calculus and differential equations.
- Understanding of fundamental concepts in engineering, such as forces, energy, and motion.

### UNIT I Standard Atmosphere 8

History of aviation – standard atmosphere - pressure, temperature and density altitude.

### UNIT II Aerodynamics 10

Aerodynamic forces – Lift generation Viscosity and its implications - Shear stress in a velocity profile - Lagrangian and Eulerian flow field - Concept of a streamline – Aircraft terminology and geometry - Aircraft types - Lift and drag coefficients using NACA data.

### UNIT III Performance and Propulsion 9

Viscous and pressure drag - flow separation - aerodynamic drag - thrust calculations - thrust/power available and thrust/power required

### UNIT IV Aircraft Stability and Structural Theory 9

Degrees of freedom of aircraft motions - stable, unstable and neutral stability - concept of static stability - Hooke's Law- brittle and ductile materials - moment of inertia – section modulus.

### UNIT V Space Applications 9

History of space research - spacecraft trajectories and basic orbital manoeuvres - six orbital elements - Kepler's laws of orbits - Newton's law of gravitation.

**TOTAL: 45 PERIODS**

### Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations and online resources.

### Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### COURSE OUTCOMES:

Upon completion of the course, the students will be able to:

C01: Illustrate the history of aviation & developments over the years

C02: Ability to identify the types & classifications of components and control systems

C03: Explain the basic concepts of flight & Physical properties of Atmosphere

C04: Identify the types of fuselage and constructions.

C05: Distinguish the types of Engines and explain the principles of Rocket

Course Code	<b>Industrial Management</b>	L	T	P	C
EE3604		3	0	0	3

#### COURSE OBJECTIVES:

The main objectives of this course are to:

- To introduce fundamental concepts of industrial management
- To understand the approaches to the study of Management
- To learn about Decision Making, Organizing and leadership
- To analyze the Managerial Role and functions
- To know about Supply Chain Management.

#### Course Description

This course provides a comprehensive overview of the principles and practices of management in organizations. It covers topics such as technology management, functions of management (planning, organizing, leading, controlling), organizational behaviour, group dynamics, and modern management concepts. Students will explore the evolution of management thought, different forms of organization, organizational culture, leadership styles, communication, decision-making, conflict resolution, and contemporary management approaches such as Management by Objectives (MBO), Strategic Management, and Information Technology in Management.

#### Prerequisites

- Basic knowledge of basic financial accounting.
- Familiarity with Accounting, Engineering Economics.

#### UNIT I Introduction

9

Technology Management - Definition - Functions - Evolution of Modern Management- Scientific Management Development of Management Thought. Approaches to the study of Management, Forms of Organization -Individual Ownership - Partnership - Joint Stock Companies - Co-operative Enterprises - Public Sector Undertakings, Corporate Frame Work- Share Holders -

Board of Directors - Committees - Chief Executive Line and Functional Managers,-Financial-Legal-Trade Union.

**UNIT II Functions of Management**

**9**

Planning - Nature and Purpose - Objectives - Strategies – Policies and Planning Premises - Decision Making - Organizing - Nature and Process - Premises - Departmentalization - Line and staff - Decentralization -Organizational culture, Staffing - selection and training .Placement - Performance appraisal - Career Strategy – Organizational Development. Leading - Managing human factor - Leadership.Communication, Controlling - Process of Controlling - Controlling techniques, productivity and operations management - Preventive control, Industrial Safety.

**UNIT III Organizational Behaviour**

**9**

Definition - Organization - Managerial Role and functions -Organizational approaches, Individual behaviour - causes - Environmental Effect - Behaviour and Performance, Perception - Organizational Implications. Personality - Contributing factors - Dimension – Need Theories - Process Theories - Job Satisfaction, Learning and Behaviour-Learning Curves, Work Design and approaches.

**UNIT IV Group Dynamics**

**9**

Group Behaviour - Groups - Contributing factors - Group Norms, Communication - Process - Barriers to communication - Effective communication, leadership - formal and informal characteristics – Managerial Grid - Leadership styles - Group Decision Making - Leadership Role in Group Decision, Group Conflicts - Types -Causes - Conflict Resolution -Inter group relations and conflict, Organization centralization and decentralization - Formal and informal - Organizational Structures Organizational Change and Development -Change Process – Resistance to Change - Culture and Ethics.

**UNIT V Modern Concepts**

**9**

Management by Objectives (MBO) - Management by Exception (MBE),Strategic Management - Planning for Future direction - SWOT Analysis -Evolving development strategies, information technology in management Decisions support system-Management Games Business Process Reengineering(BPR) –Enterprises Resource Planning (ERP) - Supply Chain Management (SCM) - Activity Based Management (AM) – Global Perspective - Principles and Steps Advantages and disadvantage.

**TOTAL: 45 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations and online resources.

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

CO1: Understand the basic concepts of industrial management

- C02: Identify the group conflicts and its causes.
- C03: Perform swot analysis
- C04: Analyze the learning curves
- C05: Understand the placement and performance appraisal

Course Code	<b>Database Management Systems</b>	L	T	P	C
EE3606		3	0	0	3

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- To learn the fundamentals of data models, relational algebra and SQL
- To represent a database system using ER diagrams and to learn normalization techniques
- To understand the fundamental concepts of transaction, concurrency and recovery Processing
- To understand the internal storage structures using different file and indexing techniques which will help in physical DB design
- To have an introductory knowledge about the Distributed databases, NOSQL and database security.

**Course Description**

This course provides a comprehensive overview of database management systems (DBMS), covering fundamental concepts, relational databases, database design, transactions, implementation techniques, and advanced topics. Students will gain a deep understanding of database systems architecture, relational model, SQL fundamentals, database design principles, transaction management, implementation techniques such as indexing and hashing, and advanced topics including distributed databases, NoSQL databases, and database security.

## Prerequisites

- Basic understanding of computer science fundamentals
- Familiarity with data structures and algorithms
- Knowledge of programming concepts, preferably in a language like Python or Java

## UNIT I Relational Databases

9

Purpose of Database System – Views of data – Data Models – Database System Architecture – Introduction to relational databases – Relational Model – Keys – Relational Algebra – SQL fundamentals – Advanced SQL features – Embedded SQL– Dynamic SQL

## UNIT II Database Design

9

Entity-Relationship model – E-R Diagrams – Enhanced-ER Model – ER-to-Relational Mapping – Functional Dependencies – Non-loss Decomposition – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form.

## UNIT III Transactions

9

Transaction Concepts – ACID Properties – Schedules – Serializability – Transaction support in SQL – Need for Concurrency – Concurrency control –Two Phase Locking- Timestamp – Multiversion –Validation and Snapshot isolation– Multiple Granularity locking – Deadlock Handling – Recovery Concepts – Recovery based on deferred and immediate update – Shadow paging – ARIES Algorithm

## UNIT IV Implementation Techniques

9

RAID – File Organization – Organization of Records in Files – Data dictionary Storage – Column Oriented Storage– Indexing and Hashing –Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing – Query Processing Overview – Algorithms for Selection, Sorting and join operations – Query optimization using Heuristics - Cost Estimation.

## UNIT V Advanced Topics

9

Distributed Databases: Architecture, Data Storage, Transaction Processing, Query processing and optimization – NOSQL Databases: Introduction – CAP Theorem – Document Based systems – Key value Stores – Column Based Systems – Graph Databases. Database Security: Security issues –Access control based on privileges – Role Based access control – SQL Injection – Statistical Database security – Flow control – Encryption and Public Key infrastructures – Challenges.

**TOTAL: 45 PERIODS**

## Course Format

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

## Assessments & Grading

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

## COURSE OUTCOMES:

**OUTCOMES:** Upon completion of the course, the students will be able to:

- CO1: Construct SQL Queries using relational algebra
- CO2: Design database using ER model and normalize the database
- CO3: Construct queries to handle transaction processing and maintain consistency of the Database
- CO4: Compare and contrast various indexing strategies and apply the knowledge to tune the performance of the database
- CO5: Appraise how advanced databases differ from Relational Databases and find a suitable database for the given requirement..

Course Code	<b>RENEWABLE ENERGY TECHNOLOGIES</b>	L	T	P	C
MT3601		3	0	0	3

**COURSE OBJECTIVES:**

- To know the Indian and global energy scenario
- To learn the various solar energy technologies and its applications.
- To educate the various wind energy technologies.
- To explore the various bio-energy technologies.
- To study the ocean and geothermal technologies.

**UNIT I Energy Scenario**

**9**

Indian energy scenario in various sectors – domestic, industrial, commercial, agriculture, transportation and others – Present conventional energy status – Present renewable energy status. Potential of various renewable energy sources-Global energy status-Per capita energy consumption - Future energy plans.

**UNIT II Solar Energy**

**9**

Solar radiation – Measurements of solar radiation and sunshine – Solar spectrum - Solar thermal collectors – Flat plate and concentrating collectors – Solar thermal applications – Solar thermal energy storage – Fundamentals of solar photo voltaic conversion – Solar cells – Solar PV Systems – Solar PV applications

**UNIT III Wind Energy** **9**

Wind data and energy estimation – Betz limit - Site selection for windfarms – characteristics - Wind resource assessment - Horizontal axis wind turbine – components - Vertical axis wind turbine – Wind turbine generators and its performance – Hybrid systems – Environmental issues – Applications.

**UNIT IV Bio-Energy** **9**

io resources – Biomass direct combustion – thermochemical conversion - biochemical conversion mechanical conversion - Biomass gasifier - Types of biomass gasifiers - Cogeneration -- Carbonisation – Pyrolysis - Biogas plants – Digesters – Biodiesel production – Ethanol production – Applications

**UNIT V Ocean and geothermal energy** **9**

Small hydro - Tidal energy – Wave energy – Open and closed OTEC Cycles – Limitations – Geothermal energy – Geothermal energy sources - Types of geothermal power plants – Applications - Environmental impact

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

On successful completion of this course, the student will be able to

- C01: Discuss the Indian and global energy scenario.
- C02: Describe the various solar energy technologies and its applications.
- C03: Explain the various wind energy technologies.
- C04: Explore the various bio-energy technologies.
- C05: Discuss the ocean and geothermal technologies.

Course Code	<b>INTRODUCTION TO CYBERSECURITY</b>	L	T	P	C
CZ3601		3	0	0	3

**Course Objective:**

- To develop a comprehensive understanding of fundamental cybersecurity concepts, including cyber threats, preventive measures, and the principles of cyber security.
- To explore the basics of networking, focusing on concepts, protocols, and architectures crucial to understanding cyber security measures.
- To acquire knowledge on core security principles, including risk management practices, to build a solid foundation for implementing effective security measures.
- To understand the principles of cryptography and encryption, exploring their role in securing data and communication channels in the realm of cybersecurity.
- To develop, implement, and enforce security policies and procedures, fostering a security-aware culture and mitigating cyber threats through effective governance.

**Unit 1: INTRODUCTION TO CYBERSECURITY CONCEPTS 9**

Introduction to Cybersecurity Fundamentals - Cyber Threat Landscape -Cybersecurity Frameworks and Standards - Security Architecture and Models - Incident Response and Cybersecurity Incident Handling - Security Awareness and Training - Legal and Ethical Aspects of Cybersecurity - Emerging Trends in Cybersecurity.

**Unit 2: FUNDAMENTALS OF NETWORKING 9**

Introduction to Networking Concepts - OSI Model Overview - TCP/IP Protocol Suite - Network Devices and Components - IP Addressing and Subnetting - Routing and Switching Basics - Wireless Networking Fundamentals - Network Security Principles.

**Unit 3: SECURITY FUNDAMENTALS 9**

Introduction to Security Principles - Access Control and Authentication - Security Risk Management - Security Policies and Procedures - Security Incident Response - Security Awareness Training - Vulnerability Assessment and Management - Physical Security Considerations

**Unit 4: CRYPTOGRAPHY AND ENCRYPTION 9**

Introduction to cryptography - symmetric encryption algorithms - asymmetric encryption and public key infrastructure (PKI) - hash functions and message digests - digital signatures - cryptographic key management - transport layer security (TLS) and secure sockets layer (SSL) - cryptography in blockchain technology.

**Unit 5: SECURITY POLICIES AND PROCEDURES 9**

introduction to security policies and procedures - policy development and implementation - access control policies - data classification and handling policies - incident response plans - security awareness training programs - compliance and regulatory policies - security auditing and monitoring procedures

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, online resources and tutorials

**Assessments & Grading**

Quizzes, Assignments/ Project, 2IAs, Model, Final Examination.

**Course Outcomes:**

At the end of this course, the students will be able to:

(CO1): Gain a clear understanding of fundamental cybersecurity principles, exploring the core concepts that form the basis of cyber defense.

(CO2): Understand the application of cybersecurity policies and risk management practices, emphasizing their importance in maintaining a secure digital environment.

(CO3): Learn about the basic tools and techniques used in investigating various types of cybercrimes, providing a foundational knowledge base for cybercrime detection and resolution.

(CO4): Apply security fundamentals to digital environments, incorporating knowledge of risk management, access control, and other core principles to enhance overall security.

(CO5): Demonstrate proficiency in cyber forensics techniques and methodologies, integrating knowledge gained from security policies and procedures to enhance investigative capabilities.

### Assignments:

1) Analyze a real-world cybersecurity case study, identifying the threats, preventive measures, and the application of fundamental cybersecurity principles.

2) Develop a comprehensive proposal for a secure network design, considering protocols, architectures, and security measures to address potential threats.

3) Create a risk management plan for a fictional organization, outlining potential risks, mitigation strategies, and a framework for implementing security policies.

4) Evaluate the implementation of cryptographic techniques in a given system, assessing their effectiveness in securing data and communication.

5) Draft an incident response plan for a specific type of cybersecurity incident, detailing the steps to be taken during detection, analysis, and resolution.

6) Design and implement a comprehensive security awareness campaign for an organization. Include strategies for educating employees on cybersecurity best practices, phishing awareness, and the importance of maintaining a security-conscious culture.

7) Conduct a simulated penetration test on a network or system, identifying vulnerabilities and providing a detailed report with recommendations for remediation.

8) Evaluate an organization's compliance with relevant cybersecurity regulations (e.g., GDPR, HIPAA). Develop a report outlining areas of compliance and suggesting improvements if necessary.

9) Perform a threat hunting exercise using security tools and techniques to proactively identify potential threats within a network. Provide a report detailing the findings and proposed actions.

10) Analyze and review the cybersecurity policies of a chosen organization. Identify strengths, weaknesses, and areas for improvement. Develop a report with recommendations for enhancing policy effectiveness.

### Reference Book:

- Cybersecurity – Attack and Defense Strategies by Yuri Diogenes and Eradal Ozkaya. 2023

- Applied Cryptography :Protocols, Algorithms and Source code in C by Bruce Schneier. 2022
- Hacking: The Art of Exploitation by Jon Erickson 2023

Course Code	<b>SECURITY PRINCIPLES</b>	L	T	P	C
CZ3602		3	0	0	3

### **COURSE OBJECTIVES:**

- To understand the basic principles and concepts of cybersecurity.
- To identify and assess security threats and vulnerabilities.
- To implement security controls and measures to protect information assets.
- To develop strategies for risk management and incident response.
- To understand the legal and ethical aspects of cybersecurity.

### **UNIT I : INTRODUCTION TO CYBERSECURITY 9**

Overview of cybersecurity concepts and terminology -Threat landscape and common types of cyber threats -Principles of risk management and risk assessment .

### **UNIT II : CRYPTOGRAPHY AND ACCESS CONTROL 9**

Basics of cryptography: encryption, hashing, digital signatures -Access control models and mechanisms: discretionary, mandatory, role-based access control

### **UNIT 3: NETWORK SECURITY 9**

Principles of network security: firewalls, intrusion detection systems, VPNs-Secure network protocols: HTTPS, SSH, IPsec

### **UNIT 4: SECURITY OPERATIONS AND INCIDENT RESPONSE 9**

Security monitoring and incident detection-Incident response procedures: detection, analysis, containment, eradication, recovery.

### **UNIT 5: LEGAL AND ETHICAL ASPECTS OF CYBERSECURITY 9**

Legal frameworks and regulations: GDPR, HIPAA, PCI DSS-Ethical considerations in cybersecurity: privacy, intellectual property, professional ethics.

**TOTAL : 45 PERIODS**

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, online resources and tutorials

### **Assessments & Grading**

Quizzes, Assignments/ Project, 2IAs, Model, Final Examination.

### **ASSIGNMENTS:**

- Threat Assessment Report: Analyze potential security threats to a given organization and propose countermeasures.
- Risk Management Plan: Develop a risk management plan outlining strategies for mitigating identified risks.

- Security Policy Review: Evaluate an organization's security policies and procedures and make recommendations for improvement.
- Incident Response Simulation: Participate in a simulated security incident response exercise, including detection, analysis, and containment.
- Ethical Dilemma Case Study: Analyze real-world ethical dilemmas in cybersecurity and propose solutions based on ethical principles.

#### **COURSE OUTCOMES:**

Students will be able to

C01: Describe the various types of cybersecurity threats and their impact on organizations.

C02: Demonstrate proficiency in implementing security controls such as encryption, firewalls, and intrusion detection systems.

C03: Develop the skills necessary to conduct risk assessments and formulate risk mitigation strategies.

C04: Analyze security incidents and respond effectively to security breaches.

C05: Understand the ethical and legal issues surrounding cybersecurity, including privacy and compliance requirements.

#### **TEXTBOOKS:**

- "Principles of Computer Security: CompTIA Security+ and Beyond" by Wm. Arthur Conklin, Greg White, Chuck Cothren, Roger L. Davis, and Dwayne Williams - This book provides a comprehensive introduction to computer security principles, covering topics such as network security, cryptography, access control, and risk management. It aligns with the CompTIA Security+ certification exam objectives. 2023
- "Computer Security: Principles and Practice" by William Stallings and Lawrie Brown - This textbook offers a thorough examination of computer security principles and practices, including cryptographic techniques, network security protocols, access control mechanisms, and security management. It covers both theoretical concepts and practical applications. 2023
- "Security in Computing" by Charles P. Pfleeger, Shari Lawrence Pfleeger, and Jonathan Margulies - This book provides a solid foundation in computer security principles, emphasizing risk management, security policies, cryptography, and secure software development. It offers practical insights and real-world examples to illustrate key concepts. 2023

#### **REFERENCE BOOKS:**

- "Cryptography and Network Security: Principles and Practice" by William Stallings - This reference book focuses on cryptographic techniques and network security protocols, providing detailed explanations of encryption algorithms, digital signatures, authentication protocols, and secure communication protocols. 2023
- "Introduction to Computer Security" by Matt Bishop - This book offers an introduction to the fundamental principles of computer security, covering topics such as access control, security models, security policies, and intrusion detection systems. It provides a solid theoretical foundation for understanding security concepts. 2022
- "Information Security: Principles and Practices" by Mark S. Merkow and James Breithaupt - This reference book explores the principles and practices of information security, including risk management, security governance, compliance frameworks, and incident response. It covers a wide range of security topics relevant to both beginners and experienced professionals. 2023
- "Network Security Essentials: Applications and Standards" by William Stallings - This book focuses on network security principles and practices, including secure communication protocols, intrusion detection systems, firewalls, and virtual private networks (VPNs). It offers comprehensive coverage of network security technologies and their applications. 2023

- "Computer Security Handbook" by Seymour Bosworth, M. E. Kabay, and Eric Whyne - This handbook provides a comprehensive overview of computer security principles, practices, and technologies. It covers a wide range of topics, including risk assessment, security policies, cryptography, access control, and security management. 2022

Course Code	<b>LIFE CYCLE ASSESSMENT</b>	L	T	P	C
CE3602		3	0	0	3

### COURSE OBJECTIVES:

The main objectives of this course are to:

- To impart knowledge and skills on the concept and methodology of Life Cycle Assessment as per international standards and its potential applications
- To develop sustainable products and promote sustainable consumption.
- To understanding of the principles, methodologies, and techniques involved in Life Cycle Assessment (LCA).
- To develop the ability to identify, quantify, and assess the environmental impacts associated with various stages of a product or system's life cycle.
- To learn how to interpret LCA results and communicate findings effectively, including understanding the significance of different impact categories.

### Course Description

This course provides an in-depth exploration of the principles, methodologies, and applications of LCA, equipping students with the knowledge and skills necessary to conduct comprehensive environmental assessments and make informed decisions to promote sustainability.

### Prerequisites

- Familiarity with the concept of life cycle thinking and systems theory.
- Understanding of fundamental environmental science concepts such as ecology, environmental impacts, and sustainability principles provides a foundational knowledge base for studying LCA.

### UNIT I Life Cycle Thinking and Life Cycle Management

9

Introduction to Life Cycle Thinking – Industrial ecology – Life cycle management (LCM) and Stakeholder Expectations - LCM drivers and issues - materials flow analysis - Life cycle of Products and services- International organizations and networks - History and definition of LCA - analytical tools for product and service systems ---Value creation along the life cycle- technical characteristics – applications – limitations

### UNIT II LCA Goal, Scope and Inventory

9

ISO 14040 framework for LCA - Life cycle goal and scope definition - function, functional unit and reference flow System boundaries, data categories, inputs and outputs, data quality, critical review and other procedural aspects - Inventory Analysis: Raw Material Extraction and Processing , Manufacturing and Production , Product Use and Consumption , End-of-life Management, Transportation and Distribution - Dealing with Allocation Issues - Solutions to the multi functionality problem - Flow diagram - Format and data categories - Attributional versus consequential LCI – LCA software and database - Data quality - Data collection and relating data to unit processes – Data validation - Cut-off and data estimation .

### **UNIT III Life Cycle Impact Analysis and Interpretation**

**9**

Characterization factors and principle of characterization - Selection of impact categories, category indicators and characterization models – Classification -Characterization - Optional elements - normalization , grouping, weighting ,data quality analysis - Characterization models – Impact assessment Case studies -Simplified/streamlined Life Cycle Assessments – procedural approaches, numerical approaches - Examples of numerical approaches - contribution analysis, perturbation analysis, uncertainty - analysis, comparative analysis, key issue analysis – Treatment of uncertainties - Elements in uncertainty handling - Sensitivity of LCA results – Sustainability analysis - Extending LCA - economic dimension, social dimension - Life cycle costing – Eco efficiency - Combining LCA and LCC – Case studies

### **UNIT IV Design for Environment and Ecolabelling**

**9**

Sustainable consumption – Eco-efficiency - green consumerism - product stewardship and green engineering - Extended producer responsibility – Design For Environment Strategies, Practices, Guidelines, Methods, And Tools .Eco design strategies –Design for Disassembly - Dematerialization, re materialization, trans materialization – Green procurement and green distribution - Analysis framework for reuse and recycling – Typical constraints on reuse and recycling - Communication of Life Cycle Information - Indian eco mark scheme – Environmental product declarations – Environmental marketing

### **UNIT V LCA Softwares and Case Studies**

**9**

LCA Softwares - LCA Software Demo: SimaPro, GREET, BEES, CMU EIO,GABI - Advances in LCA: Hybrid LCA, Thermodynamic LCA - LCA case studies on Product Design, Product Improvement, Product Comparison and Policy development.

### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, online resources and tutorials

### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

### **COURSE OUTCOMES:**

OUTCOMES: Upon completion of the course, the students will be able to:

CO1: Explain the various functional elements of Life Cycle Analysis and Design for Environment

CO2: Apply the knowledge of science and engineering fundamentals to characterize the environmental interactions of products and services

CO3: Design of engineering systems taking into account the material flow and pollutant interactions between engineering decisions and the environment

CO4: Select appropriate LCA tools to support product/process design and decision making, taking into account the impact of the solutions in a sustainability context

CO5: Evaluate generative models using appropriate metrics and critically analyse the ethical implications, privacy concerns, and societal impact of generative AI technologies.

**TEXT BOOKS:**

**TOTAL: 45 PERIODS**

**YouTube Resources:**

1. **Sustainable Minds** - Sustainable Minds is a provider of cloud-based software and services for sustainable product development.
  2. **Life Cycle Assessment – SimaPro**- SimaPro is one of the leading software tools for conducting Life Cycle Assessments.
  3. **European Commission – JRC**- The Joint Research Centre (JRC) of the European Commission produces research and technical reports on a wide range of topics, including environmental sustainability and Life Cycle Assessment.
  4. **Life Cycle Initiative** - The Life Cycle Initiative, hosted by the United Nations Environment Programme (UNEP), promotes the use of life cycle approaches for sustainable development.
- LCA Learning** - This channel offers various educational videos on Life Cycle Assessment, including tutorials, case studies, and discussions on LCA methodology and applications.

**OPEN ELECTIVES- II**

Course Code	<b>Biomaterials</b>	L	T	P	C
BM3701		3	0	0	3

**COURSE OBJECTIVES:**

The students should be made:

- To have an overview of biomaterial science.

- To describe the principles of compatibility design with a case study.
- To explain the interaction and design parameters
- To study about various tests.
- To study about ethical issues and regulation aspects

**UNIT I Introduction to Biomaterial Science 9**

Basic properties of biomaterials - Metallic, Ceramic, Polymeric and Composite -Medical fibres and biotextiles – Smart polymers – bioresorbable and bio erodible materials – natural materials, metals and ceramics – physicochemical surface modification. Chemical and biochemical degradation of polymers – degradation of metals and ceramics – calcification of biomaterials.

**UNIT II Compatibility 9**

Biocompatibility concepts: Introduction to biocompatibility – cell material interaction – types of materials – toxic, inert, bioactive – long term effects of materials within the body – cell response. Biomaterial characterization techniques Fundamental characteristics of implants - biocompatibility, bioactivity, biodegradability. Basics of drug delivery Basics of tissue engineering Rheology.

**UNIT III Interactions 9**

Host reactions and their evaluation: Inflammation and foreign body response – adaptive immunity – systemic toxicity and hypersensitivity – blood coagulation and blood materials interactions – device related infections.

**UNIT IV Evaluation 9**

Biological testing of biomaterials: Invitro and invivo assessment of tissue compatibility – evaluation of blood materials interaction – microscopy in biomaterials.

**UNIT V Regulation 9**

Practical aspects of biomaterials: Bioelectrodes, biomedical sensors and biosensors – sterilization of implants – implant failure – implant retrieval and evaluation – legal aspects, ethical issues and regulation aspects.

**45 PERIODS**

**COURSE OUTCOMES:** Upon completion of the course, the student will be able to

- C01: Gain adequate knowledge about biomaterial science.
- C02: Get clear idea of compatibility parameters and solutions.
- C03: Have in-depth knowledge about interaction.
- C04: Explain different types testing techniques.
- C05: Access practical issues

**TEXT BOOKS & REFERENCES:**

- Buddy D Ratner, Allan S Hoffman, “Biomaterials Science – An introduction to materials in Medicine”, Elsevier academic press, (2024).

Course Code	<b>BIOMEDICAL OPTICS AND PHOTONICS</b>	L	T	P	C
BM3704		3	0	0	3

## **COURSE OBJECTIVES:**

The students should be made:

- To acquire knowledge about the physical properties of light and optical properties of tissue.
- To learn the design and working principle of various optical components.
- To understand the principles and applications of optical biosensors.
- To understand the engineering and practical applications of optical related to diagnostic and surgical applications.
- To understand the phenomenon of laser tissue interaction and practical application of optical related to therapeutic equipment.

### **UNIT I Optical Properties 9**

Basic principles of light - Reflection - Refraction - Absorption - Polarization - Interference - Coherence, Basic laws of light - Beer Lambert law - Snell's law, Optical properties of tissues - Absorption - Scattering - Anisotropy.

### **UNIT II Optical Instrumentation 9**

Working principle of light sources - Lasers - LEDs, Working principle of optical detectors - Photodiode - Spectrometer- CMOS and CCD cameras - Lens - Optical filters - Optical fibers.

### **UNIT III Optical Biosensors 9**

Principles of Optical biosensing - Immobilization of bio-recognition elements, Types of optical biosensor - Fiber optic - Planar waveguide - Evanescent - Interferometric - Surface plasmon resonance - Advantages and disadvantages - Applications.

### **UNIT IV Applications of Lasers 9**

Diagnostic - Optical coherence tomography, Fluorescence, Raman, Photo acoustic tomography, Laser induced breakdown spectroscopy (LIBS), Hyper spectral imaging. Surgical - Lasers in dentistry, Dermatology, Ophthalmology.

### **UNIT V Laser Tissue Interaction 9**

Laser tissue interactions via photochemical, Photo thermal, Photomechanical techniques, Photodynamic therapy (PDT) - Oncological and non-ontological applications, Low level laser therapy (LLLT) – bio stimulation applications.

**45 PERIODS**

#### **Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

#### **Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:** Upon completion of the course, the student will be able to

C01: Explain the various physical properties of light and optical properties of tissues.

C02: Design analysis-by-synthesis model for speech perception..

C03: Discuss the various applications of biosensors in medicine

CO4: Summarize the diagnostic and surgical applications of lasers in medicine

CO5: Explain the laser tissue interaction and various therapeutic applications of lasers.

Course Code	<b>PRODUCTION AND OPERATIONS MANAGEMENT FOR ENTREPRENEURS</b>		T	P	C
ME3702		3	0	0	3

**COURSE OBJECTIVES:**

The students should be made:

- To know the basic concept and function of Production and Operation Management for entrepreneurship.
- To understand the Production process and planning.
- To understand the Production and Operations Management Control for business owners
- To apply production & operations management process
- To analyse and Controlling production & operations management

**UNIT I Introduction to Production and Operations Management 9**

Functions of Production Management - Relationship between production and other functions – Production management and operations management, Characteristics of modern production and operation management, organisation of production function, recent trends in production /operations management - production as an organisational function, decision making in production Operations research

**UNIT II Production & operation systems 9**

Production Systems- principles – Models - CAD and CAM- Automation in Production - Functions and significance- Capacity and Facility Planning: Importance of capacity planning- Capacity measurement – Capacity Requirement Planning (CRP) process for manufacturing and service industry

**UNIT III Production & Operations planning 9**

Facility Planning – Location of facilities – Location flexibility – Facility design process and techniques – Location break even analysis-Production Process Planning: Characteristic of production process systems – Steps for production process- Production Planning Control Functions – Planning phase- Action phase- Control phase - Aggregate production planning

- To learn the kinematics of wheeled and legged robot.
- To familiarize the intelligence into the mobile robots using various sensors.
- To acquaint the localization strategies and mapping technique for mobile robot.
- To aware the collaborative mobile robotics in task planning, navigation and intelligence.

**UNIT I Introduction to mobile robots 9**

Introduction – Locomotion of the Robots – Key Issues on Locomotion – Legged Mobile Robots – Configurations and Stability – Wheeled Mobile Robots – Design Space and Mobility Issues – Unmanned Aerial and Underwater Vehicles

**UNIT II Kinematics 9**

Kinematic Models – Representation of Robot – Forward Kinematics – Wheel and Robot Constraints – Degree of Mobility and Steerability – Manoeuvrability – Workspace – Degrees of Freedom – Path and Trajectory Considerations – Motion Controls - Holonomic Robots

**UNIT III Perception 9**

Sensor for Mobile Robots – Classification and Performance Characterization – Wheel/Motor Sensors – Heading Sensors - Ground-Based Beacons - Active Ranging - Motion/Speed Sensors – Camera - Visual Appearance based Feature Extraction

**UNIT IV Localization 9**

Localization Based Navigation Versus Programmed Solutions - Map Representation - Continuous Representations - Decomposition Strategies - Probabilistic Map-Based Localization - Landmark-Based Navigation - Globally Unique Localization - Positioning Beacon Systems - Route-Based Localization - Autonomous Map Building - Simultaneous Localization and Mapping (SLAM).

**UNIT V Planning, Navigation and Collaborative Robots 9**

Introduction - Competences for Navigation: Planning and Reacting - Path Planning - Obstacle Avoidance - Navigation Architectures - Control Localization - Techniques for Decomposition - Case Studies – Collaborative Robots – Swarm Robots.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

Upon completion of the course, students will be able to

C01: Evaluate the appropriate mobile robots for the desired application.

C02: Create the kinematics for given wheeled and legged robot.

C03: Analyse the sensors for the intelligence of mobile robotics.

C04: Create the localization strategies and mapping technique for mobile robot.

C05: Create the collaborative mobile robotics for planning, navigation and intelligence for desired applications

Course Code	<b>CLIMATE CHANGE AND ADAPTATION</b>	L	T	P	C
CE3701		3	0	0	3

### **COURSE OBJECTIVES:**

- To know the basics, importance of global warming
- To know the concept of mitigation measures against global warming
- To learn about the global warming and climate change
- To analyse climate changes and its causes
- To apply and analyse climate change and mitigation measures

### **Course Description**

This course provides an introduction to the theory and practical applications of Climate change and adaptation. Students will learn the fundamental concepts and techniques related to Climate change and adaptation and gain hands-on experience with creating and using Climate change and adaptation.

### **Prerequisites**

- Basic knowledge of Climate change and adaptation..
- Familiarity with Climate change.

### **UNIT I Earth's Climate System 9**

Role of ozone in environment ozone layer ozone depleting gases Green House Effect, Radiative effects of Greenhouses Gases Hydrological Cycle Green House Gases and Global Warming Carbon Cycle

### **UNIT II Atmosphere And Its Components 9**

Importance of Atmosphere - Physical Chemical Characteristics of Atmosphere - Vertical structure of the atmosphere- Composition of the atmosphere Atmospheric stability- Temperature profile of the atmosphere - Lapse rates - Temperature inversion - effects of inversion on pollution dispersion

### **UNIT III Impacts Of Climate Change 9**

Causes of Climate change : Change of Temperature in the environment Melting of ice Pole-sea level rise-Impacts of Climate Change on various sectors Agriculture, Forestry and Ecosystem Water Resources Human Health Industry, Settlement and Society Methods and Scenarios

Projected Impacts for Different Regions Uncertainties in the Projected Impacts of Climate Change Risk of Irreversible Changes

**UNIT IV Climate Changes And Its Causes 9**

Climate change and Carbon credits - CDM - Initiatives in India-Kyoto Protocol Intergovernmental Panel on Climate change - Climate Sensitivity and Feedbacks - The Montreal Protocol - UNFCCCIPCC - Evidences of Changes in Climate and Environment - on a Global Scale and in India.

**UNIT V Climate Change And Mitigation Measures 9**

Clean Development Mechanism -Carbon Trading -examples of future Clean Technology - Biodiesel - Natural Compost - Eco-Friendly Plastic - Alternate Energy -Hydrogen - Bio-fuels - Solar Energy - Wind - Hydroelectric Power -Mitigation Efforts in India and Adaptation funding Key Mitigation Technologies and Practices-Energy Supply - Transport - Buildings- Industry-Agriculture - Forestry - Carbon sequestration- Carbon capture and storage (CCS) - Municipal solid Waste (MSW) & Bio waste, Biomedical, Industrial waste International and Regional cooperation.

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:**

Upon completion of the course, the students will be able to:

C01: Demonstrate an understanding of how the threats and opportunities of predicted climate changes will influence specific sectors at global and regional scale.

C02: Identify the relationship between atmosphere and its components

C03: Analyze the impacts of climate change on environment parameters

C04: Evaluate the scientific insights underlying the assessment reports of the IPCC, with a focus on impacts, adaptation and mitigation.

C05: Critically evaluate the relative opportunities and needs for mitigation and adaptation (including vulnerability assessments) in a variety of sectoral contexts.

**TEXT BOOKS:**

1. Sangam Shrestha, Mukand S. Babel and Vishnu Prasad Pandey, 2024, Climate Change and Water Resources, CRC Press an imprint of the Taylor & Francis Group.
2. Intergovernmental Panel on Climate Change: <https://www.ipcc.ch/>

2. Atmospheric Science, J.M. Wallace and P.V. Hobbs, Elsevier / Academic Press 2022
3. Jan C. van Dam, Impacts of Climate Change and Climate Variability on Hydrological Regimes?, Cambridge University Press, 2023

**TOTAL: 45 PERIODS**

**YouTube Resources:**

1. **Climate Reality:** Founded by former US Vice President Al Gore, this channel provides informative videos on climate change science, impacts, and solutions, as well as stories of communities adapting to a changing climate.
2. **NASA Climate Change:** NASA's YouTube channel features videos on climate change research, satellite observations, and educational content explaining the science behind climate change.
3. **Our Changing Climate:** This channel offers well-researched videos on various aspects of climate change, including its causes, impacts, and adaptation strategies, presented in an engaging and accessible format.
4. **Climate Central:** Climate Central's YouTube channel provides videos on climate science, extreme weather events, and adaptation efforts, with a focus on communicating climate change impacts to the public.
5. **UNFCCC:** The United Nations Framework Convention on Climate Change (UNFCCC) shares videos on its YouTube channel related to international climate negotiations, climate action initiatives, and adaptation efforts around the world.
6. **Yale Climate Connections:** This channel features videos on climate change news, solutions, and innovations, as well as stories of communities and individuals taking action to address climate change and adapt to its impacts.
7. **Climate Adaptation Knowledge Exchange (CAKE):** CAKE's YouTube channel offers resources and discussions on climate change adaptation strategies, case studies, and best practices, aimed at professionals, policymakers, and community leaders.

Course Code	<b>ENVIRONMENTAL IMPACT ASSESSMENT</b>	L	T	P	C
CE3705		3	0	0	3

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- To expose the students to the need, methodology, documentation and usefulness of environmental impact assessment
- To develop the skill to prepare an environmental management plan.
- To participate in the performance of an environmental assessment process, given the disciplinary knowledge and skills in natural sciences and engineering the student have achieved in other courses.
- To provide an introduction to the theory and practical applications of environmental impact. Students will learn the fundamental concepts and techniques
- To environmental impact and gain hands-on experience with creating and using environmental impact assessment.

**UNIT I Introduction 9**

Historical development of Environmental Impact Assessment (EIA). Environmental Clearance-EIA in project cycle. legal and regulatory aspects in India – types and limitations of EIA –EIA process screening – scoping - terms of reference in EIA- setting – analysis – mitigation. Cross sectoral issues –public hearing in EIA- EIA consultant accreditation.

**UNIT II Impact Identification And Prediction 9**

4. K.V.Raghavan and A. A. Khan, "Methodologies in Hazard Identification and Risk Assessment", Manual by CLRI, 2022

**TOTAL : 45 PERIODS**

**YouTube Resources:**

1. **IIT Roorkee**- EIA is basically a tool used to assess the positive and negative environmental, economic and social impacts of a project.
2. **Science Sauce** - Explaining tricky Science concepts in as little time as possible. All content created by Alex Nixon..
3. **Border Archaeology** - They are mandated by The Town and Planning Regulations 2011 for projects falling under Schedule 1 and may also be sought by a local planning authority for Schedule 2-type projects following project screening and scoping..
4. **Sustainable Technology Solutions** - The relevance of EIA lies in its ability to ensure that projects are designed and implemented in a way that minimizes environmental harm and promotes sustainable development.
5. **Sigma Earth** - Climate change refers to long-term shifts in temperatures and weather patterns. Human activities have been the main driver of climate change, primarily due to the burning of fossil fuels like coal, oil and gas.

Course Code	<b>Introduction To PLC Programming</b>	L	T	P	C
EE3706		3	0	0	3

**COURSE OBJECTIVES:**

The main objectives of this course are to:

- Understand basic PLC terminologies, digital principles, PLC architecture and operation.
- Familiarize different programming languages of PLC.
- Develop PLC logic for simple applications using ladder logic.
- Understand the hardware and software behind PLC and SCADA.
- Exposures about communication architecture of PLC/SCADA.

**Course Description**

This course provides students with a comprehensive understanding of Programmable Logic Controllers (PLC) and Supervisory Control and Data Acquisition (SCADA) systems used in industrial automation. Students will learn about the fundamentals of PLCs, programming techniques, communication protocols, and their integration with SCADA systems. Case studies will be utilized to illustrate real-world applications of PLC and SCADA technology.

**Prerequisites**

- Basic understanding of electrical circuits and industrial automation systems.
- Familiarity with programming concepts and logic.

**UNIT I** **Introduction to PLC** **9**

Introduction to PLC: Microprocessor, I/O Ports, Isolation, Filters, Drivers, Microcontrollers/DSP, PLC/DDC- PLC Construction: What is a PLC, PLC Memories, PLC I/O, , PLC Special I/O, PLC Types.

**UNIT II** **PLC INSTRUCTIONS** **9**

PLC Basic Instructions: PLC Ladder Language- Function block Programming- Ladder/Function Block functions- PLC Basic Instructions, Basic Examples (Start Stop Rung, Entry/Reset Rung)- Configuration of Sensors, Switches, Solid State Relays- Interlock examples- Timers, Counters, Examples.

**UNIT III** **PLC Programming** **9**

Different types of PLC program, Basic Ladder logic, logic functions, PLC module addressing, registers basics, basic relay instructions, Latching Relays, arithmetic functions, comparison functions, data handling, data move functions, timer-counter instructions, input-output instructions, sequencer instructions

**UNIT IV** **Communication of PLC and SCADA** **9**

Communication Protocol – Modbus, HART, Profibus- Communication facilities SCADA: - Hardware and software, Remote terminal units, Master Station and Communication architectures

**UNIT V** **Case Studies** **9**

Stepper Motor Control – Elevator Control – CNC Machine Control – conveyor control-Inter locking Problems.

**TOTAL: 45 PERIODS**

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, and online resources

**Assessments & Grading**

Quizzes / Assignments, Project, 3 Internal Assessments, Final Examination

**COURSE OUTCOMES:**

**OUTCOMES:** Upon completion of the course, the students will be able to:

C01: Know the basic requirements of a PLC input/output devices and architecture.

C02: Ability to apply Basics Instruction Sets used for ladder Logic and Function Block Programming.

C03: Ability to design PLC Programmes by Applying Timer/Counter and Arithmetic and Logic Instructions Studied for Ladder Logic and Function Block.

C04: Able to develop a PLC logic for a specific application on real world problems.

C05: Ability to Understand the Concepts of Communication used for PLC/SCADA.

**TEXT BOOKS:**

- Frank Petruzzola, Programmable Logic Controllers, TataMc-Graw Hill Edition, 2023
- JohnW.Webb, RonaldA.Reis Programmable Logic Controllers Principles and Applications, PHI publication 2022

Role-Based Access Control (RBAC) - Incident Response Plans (IRP) - Risk Assessment and Management - Security Awareness Training - Security Governance - Regulatory Compliance and Legal Considerations - Security Training and Awareness Programs - Cybersecurity Risk Communication.

**UNIT 4 CYBERCRIME INVESTIGATION TECHNIQUES 9**

Digital Evidence Collection and Preservation - Network Forensics and Traffic Analysis - Malware Analysis and Reverse Engineering - Incident Response and Cyber Threat Hunting - Mobile Forensics - Cloud Forensics - Forensic Data Analysis and Visualization - Legal Aspects of Cybercrime Investigations.

**UNIT 5 CYBER DECEPTION AND SOCIAL ENGINEERING TACTICS 9**

Deepfake Technology and Social Engineering - Psychological Manipulation Techniques - Social Engineering in the Context of Business Email Compromise (BEC) - Cognitive Biases Exploited in Social Engineering - Hacking the Human OS: Exploiting Human Vulnerabilities in Cybersecurity - Insights from Famous Social Engineering Attacks - Reverse Social Engineering: Turning the Tables on Attackers - Ethical Hacking and Social Engineering Awareness Programs.

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, online resources and tutorials

**Assessments & Grading**

Quizzes, Assignments/ Project, 2IAs, Model, Final Examination.

Assignments / Projects (sample): 45 PERIODS

- Designing a Cybersecurity Awareness Campaign
- Cybercrime Case Analysis
- Building a Cybercrime Prevention Handbook
- Cybersecurity Policy Review
- Risk Management Simulation
- Digital Forensics Case Study
- Building a Cybercrime Investigation Toolkit
- Social Engineering Awareness Training
- Cyber Deception Exercise

**COURSE OUTCOMES :**

At the end of this course, the students will be able to:

- CO1. Demystify the fundamental principles of cyber security.
- CO2. Delineate the use of Cyber security Policies and Risk Management
- CO3. Elucidate the basic tools, and techniques employed in investigating various types of cybercrimes
- CO4. Apply the digital forensics, covering essential concepts, methodologies, and tools
- CO5. Demonstrate the cyber forensics techniques and methodologies.

**TEXT BOOKS:**

- Cyber crime investigation manual published in 2023  
[https://jhpolic.gov.in/sites/default/files/documents-reports/jhpolic\\_cyber\\_crime\\_investigation\\_manual.pdf](https://jhpolic.gov.in/sites/default/files/documents-reports/jhpolic_cyber_crime_investigation_manual.pdf)
- Nina Godbole and Sunit Belpure, Cyber Security Understanding Cyber Crimes, Computer Forensics and Legal Perspectives, Wiley 2023

Social Media Investigations - Open-Source Intelligence (OSINT) - Email and Communication Tracing - Dark Web Investigations - Online Fraud Investigations - Cyber Threat Intelligence - Digital Copyright and Intellectual Property Investigations - Online Extremism and Radicalization Investigations.

**Unit 4** **Mobile Device Forensics** **9**

Mobile Device Acquisition Techniques - Operating System Forensics - App Forensics - Cloud Integration and Data Synchronization - Mobile Device Security Measures - Location-Based Services and GPS Analysis - Mobile Device Network Analysis - Messaging and Social Media Forensics.

**Unit 5** **Investigation and Evidence Collection** **9**

Digital Crime Scene Management - Legal Frameworks and Digital Forensic Regulations - Chain of Custody and Documentation - Evidence Collection from Digital Devices - Network Forensic Investigations - Incident Response Procedures - Forensic Imaging and Data Extraction - Forensic Analysis Tools and Techniques.

**Course Format**

Lectures and discussions, Hands-on coding exercises and projects, Guest lectures by industry Experts, Group discussions and presentations, Online resources and tutorials.

**Assessments & Grading**

Quizzes, Assignments/ Project, 2IAs ,Model, Final Examination

**Assignments / Projects (sample):** **45**  
**PERIODS**

- Digital Forensic Tool Review
- Digital Forensic Case Analysis
- Digital Crime Trends Report
- Digital Crime Awareness Campaign
- Dark Web Exploration
- Online Fraud Investigation
- Mobile Device Security Analysis
- Mobile Device Forensic Case Study
- Legal and Ethical Considerations in Digital Investigations.
- Mock Crime Scene Investigation

**COURSE OUTCOMES:**

At the end of this course, the students will be able to:

**CO1** : Clarify the foundational principles of digital forensics, unravelling the core concepts essential to the field.

**CO2** : Evaluate and delineate strategies for managing risks associated with digital forensic investigations.

**CO3** : Elaborate on the basic tools and techniques utilized in the investigation of various types of cybercrimes.

**CO4** : Apply digital forensics principles, methodologies, and tools in practical scenarios.

**CO5** : Demonstrate advanced cyber forensics techniques and methodologies in real-world situations

Course Code	<b>OPERATIONAL TECHNOLOGY SECURITY</b>	L	T	P	C
CZ3704		3	0	0	3

**COURSE DESCRIPTION:**

Operational Technology (OT) Security is a specialized course that focuses on securing industrial control systems, SCADA (Supervisory Control and Data Acquisition) systems, and other critical infrastructure from cyber threats. The course covers essential concepts, techniques, and best practices for protecting OT environments, including risk assessment, asset inventory, network segmentation, intrusion detection, and incident response.

**COURSE OBJECTIVES:**

Students can able to

- To Understand the unique challenges and vulnerabilities of operational technology (OT) systems.
- To Learn the principles and best practices for securing industrial control systems and SCADA systems.
- To Develop skills in conducting risk assessments and implementing security controls in OT environments.
- To Familiarize students with industry standards and regulations relevant to OT security.
- To Prepare students to respond effectively to security incidents in OT environments.

**UNIT I: INTRODUCTION TO OPERATIONAL TECHNOLOGY (OT) SECURITY 9**

Overview of OT systems and their significance -Unique challenges and vulnerabilities of OT environments- Principles of OT security and risk management.

**UNIT II: SECURING INDUSTRIAL CONTROL SYSTEMS (ICS) 9**

Overview of industrial control systems (ICS) and SCADA systems - Security architecture and best practices for ICS security - Asset inventory and vulnerability assessment in ICS environments

**UNIT III: NETWORK SEGMENTATION AND ACCESS CONTROL 9**

Network segmentation strategies for OT environments - Access control mechanisms and authentication protocols in OT systems - Implementing access controls and network segmentation in OT networks

**UNIT IV: INTRUSION DETECTION AND INCIDENT RESPONSE 9**

Intrusion detection systems (IDS) for OT environments - Incident response procedures and best practices for OT security incidents- Incident detection, analysis, containment, and recovery in OT environments.

**UNIT V: REGULATORY COMPLIANCE AND STANDARDS 9**

Regulatory and compliance requirements for OT security - Industry standards and frameworks for OT security (e.g., NIST, IEC) -Ensuring compliance with relevant standards and regulations in OT environments.

**TOTAL : 45 PERIODS**

**ASSIGNMENTS:**

- Risk Assessment Report: Conduct a risk assessment of a simulated OT environment and develop a risk mitigation plan.
- Security Control Implementation: Implement security controls such as access controls, network segmentation, and IDS in a virtual OT environment.
- Incident Response Simulation: Participate in a simulated security incident response exercise in an OT environment, including detection, analysis, and containment of security incidents.
- Compliance Audit: Conduct a compliance audit of an OT environment, ensuring adherence to relevant standards and regulations.
- Case Study Analysis: Analyze real-world case studies of OT security breaches and develop recommendations for improving security posture.

**COURSE OUTCOMES:**

At the end of this course, the students will be able to

C01: Identify and assess security risks in operational technology (OT) systems.

C02: Demonstrate proficiency in implementing security controls such as access controls, network segmentation, and intrusion detection systems (IDS) in OT environments.

C03: Develop the ability to analyze and respond to security incidents in OT environments, including incident detection, containment, and recovery.

C04: Understand the regulatory and compliance requirements applicable to OT security and be able to ensure compliance with relevant standards.

C05: Gain practical experience through hands-on labs, case studies, and real-world simulations in securing OT systems.

**TEXTBOOKS:**

- "Industrial Network Security: Securing Critical Infrastructure Networks for Smart Grid, SCADA, and Other Industrial Control Systems" by Eric D. Knapp and Joel Langill - This

book provides comprehensive coverage of industrial network security, including SCADA systems, smart grids, and other critical infrastructure networks. 2023

- "Hacking Exposed Industrial Control Systems: ICS and SCADA Security Secrets & Solutions" by Clint Bodungen, Bryan L. Singer, and Aaron Shbeeb - This book offers practical insights and solutions for securing industrial control systems and SCADA environments, with a focus on real-world threats and vulnerabilities. 2022
- "Practical SCADA for Industry" by David Bailey and Edwin Wright - This book covers the fundamentals of SCADA systems and their practical applications in industrial environments, including security considerations and best practices. 2023

#### **REFERENCE BOOKS:**

- "SCADA and Me: A Book for Children and Management" by Robert M. Lee - This book provides an accessible introduction to SCADA systems and their importance in industrial operations, suitable for both children and management professionals. 2023
- "SCADA Security: What's Broken and How to Fix It" by Andrew Ginter - This book offers insights into the vulnerabilities and security challenges faced by SCADA systems, along with practical strategies for improving SCADA security. 2022
- "Introduction to Industrial Control Networks" by Perry Marshall - This book covers the basics of industrial control networks, including communication protocols, network architectures, and security considerations. 2022
- "Industrial Cybersecurity: Efficiently secure critical infrastructure systems" by Pascal Ackerman - This book provides guidance on designing and implementing cybersecurity solutions for industrial control systems and critical infrastructure networks. 2022
- "Security for SCADA Systems" by Dale Peterson - This book offers in-depth coverage of security principles, techniques, and best practices specific to SCADA systems, with practical examples and case studies. 2023

#### **YouTube References:**

- SANS Institute: Offers a variety of videos and webinars on OT security topics, including ICS/SCADA security, threat intelligence, and incident response.
- Dragos: Provides insights and analysis on OT security threats and vulnerabilities, with a focus on industrial control systems and critical infrastructure.
- Nozomi Networks: Offers educational content and tutorials on OT security best practices, including network monitoring, anomaly detection, and threat hunting in OT environments.

## MANDATORY COURSES

<b>Mandatory Courses - 1</b>
Introduction to Women and Gender Studies
Elements of Literature
Film Appreciation
Disaster Management
Environmental Science and Sustainability

<b>Mandatory Courses - II</b>
Well Being with traditional practices (Yoga, Ayurveda and Siddha)
History of Science and Technology in India
Political and Economic Thought for a Humane Society
State, Nation Building and Politics in India
Industrial Safety

### Mandatory Courses – 1

Course Code	<b>INTRODUCTION TO WOMEN AND GENDER STUDIES</b>	L	T	P	C
MC3301		2	0	0	0

**COURSE OBJECTIVES:**

- To Understand the difference between sex and gender, including masculinity and femininity, shaped by societal norms.
- To Critique patriarchal systems and hierarchies, advocating for the deconstruction of binary views and recognition of gender diversity.
- To Engage with various feminist frameworks to analyze and address gender inequality.
- To Trace the development and impact of feminist movements globally, nationally, and locally.
- To Analyze language, media, and narratives to understand and challenge gender norms and stereotypes.

<b>UNIT I</b>	<b>CONCEPTS</b>	2
Sex vs. Gender, masculinity, femininity, socialization, patriarchy, public/ private, essentialism, binaryism, power, hegemony, hierarchy, stereotype, gender roles, gender relation, deconstruction, resistance, sexual division of labour.		
<b>UNIT II</b>	<b>FEMINIST THEORY</b>	2
Liberal, Marxist, Socialist, Radical, Psychoanalytic, postmodernist, ecofeminist.		
<b>UNIT III</b>	<b>WOMEN’S MOVEMENTS: GLOBAL, NATIONAL AND LOCAL</b>	2
Rise of Feminism in Europe and America, Women’s Movement in India.		
<b>UNIT IV</b>	<b>GENDER AND LANGUAGE</b>	2
Linguistic Forms and Gender, Gender and narratives.		
<b>UNIT V</b>	<b>GENDER AND REPRESENTATION</b>	2
Advertising and popular visual media, Gender and Representation in Alternative Media, Gender and social media.		

**TOTAL: 10 PERIODS**

**Course Outcomes:**

- Upon Successful Completion of the course the students will be able to
- C01: Mastery of key gender studies concepts, including sex vs. gender, patriarchy, and power dynamics.
  - C02: Ability to critically evaluate societal norms and gender roles, recognizing and deconstructing stereotypes.
  - C03: Application of diverse feminist theories to address gender inequality on local, national, and global scales.
  - C04: Understanding of the historical progression and impact of feminist movements on social attitudes and policies.
  - C05: Development of effective communication skills to advocate for gender equality, challenging norms in language, media, and society architecture and how different ARM processors work.

**Text Books & References:**

- To be decided by the teacher and student, on the basis of individual student so as to enable him or her to write the term paper

Course Code	<b>ELEMENTS OF LITERATURE</b>	L	T	P	C
MC3302		2	0	0	0

**COURSE OBJECTIVES:**

- To make the students aware about the finer sensibilities of human existence through an art form. The students will learn to appreciate different forms of literature as suitable modes of expressing human experience

**UNIT I RELEVANCE OF LITERATURE 2**

Enhances Reading, thinking, discussing and writing skills, Develops finer sensibility for better human relationship, Increases understanding of the problem of humanity without bias, Providing space to reconcile and get a cathartic effect.

**UNIT II ELEMENTS OF FICTION 2**

Fiction, fact and literary truth, Fictional modes and patterns, Plot character and perspective.

**UNIT III ELEMENTS OF POETRY 2**

Emotions and imaginations, Figurative language, Simile, metaphor, conceit, symbol, pun and irony, Personification and animation, Rhetoric and trend.

**UNIT IV ELEMENTS OF DRAMA 2**

Drama as representational art, Content mode and elements, Theatrical performance, Drama as narration, mediation and persuasion, Features of tragedy, comedy and satire.

**UNIT V TUTORIALS 2**

The students will write a term paper to show their understanding of a particular piece of literature

**TOTAL:10 PERIODS****Course Outcomes:**

Upon Successful Completion of the course the students will be able to  
Students will be able to understand the relevance of literature in human life and appreciate its aspects in developing finer sensibilities

**Text Books:**

1. An Introduction to the Study of English Literature, W.H. Hudson, Atlantic, 2023.
2. An Introduction to Literary Studies, Mario Klarer, Routledge, 2023.

**References:**

1. The Experience of Poetry, Graham Mode, Open college of Arts with Open Univ Press, 2023.
2. The Elements of Fiction: A Survey, Ulf Wolf (ed), Wolfstuff, 2022.

Course Code	<b>FILM APPRECIATION</b>	L	T	P	C
MC3303		2	0	0	0

**COURSE OBJECTIVES:**

- Understand filmmaking components, including equipment and storytelling.
- Trace film language evolution, focusing on significant milestones.
- Explore film theories (realist, auteurist, psychoanalytic, feminist).
- Analyze representative films from diverse cultural contexts.
- Examine Indian cinema's development, from early era to regional diversity..

**UNIT I THE COMPONENT OF FILMS 2**

The material and equipment, The story, screenplay and script, The actors, crew members, and the director, The process of film making, Structure of a film

**UNIT II EVOLUTION OF FILM LANGUAGE 2**

Film language, form, movement etc, Early cinema, Silent film (Particularly French), The emergence of feature films: Birth of a Nation, Talkies

**UNIT III FILM THEORIES AND CRITICISM/APPRECIATION 2**

Realist theory: Auteurists, Psychoanalytic, Ideological, Feminists, How to read films? Film Criticism / Appreciation

**UNIT IV DEVELOPMENT OF FILMS 2**

Representative Soviet films, Representative Japanese films, Representative Italian films, Representative Hollywood film and the studio system.

**UNIT V INDIAN FILMS 2**

The early era, The important films made by the directors, The regional films, The documentaries in India

**TOTAL:10 PERIODS**

**Course Outcomes:**

Upon Successful Completion of the course the students will be able to

- CO1: Gain a comprehensive understanding of filmmaking components and techniques
- CO2: Explore the historical evolution of film language and major milestones.
- CO3: Develop critical analysis skills through the study of various film theories.
- CO4: Broaden cultural awareness by analyzing representative films from diverse contexts.
- CO5: Appreciate the development and diversity of Indian cinema

**Text Books:**

A Reader containing important articles on films will be prepared and given to the students. The students must read them and present in the class and have discussion on these

Course Code	<b>DISASTER RISK REDUCTION AND MANAGEMENT</b>	L	T	P	C
MC3304		2	0	0	0

**COURSE OBJECTIVES:**

- To impart knowledge on concepts related to disaster, disaster risk reduction, disaster

- management
- To acquaint with the skills for planning and organizing disaster response

**UNIT I HAZARDS, VULNERABILITY AND DISASTER RISKS 2**

Definition: Disaster, Hazard, Vulnerability, Resilience, Risks – Types of Disasters: Natural, Human induced, Climate change induced –Earthquake, Landslide, Flood, Drought, Fire etc – Technological disasters- Structural collapse, Industrial accidents, oil spills -Causes, Impacts including social, Economic, political, environmental, health, psychosocial, etc.- Disaster vulnerability profile of India and Tamil Nadu - Global trends in disasters: urban disasters, pandemics, Complex emergencies, Inter relations between Disasters and Sustainable development Goals

**UNIT II DISASTER RISK REDUCTION (DRR) 2**

Sendai Framework for Disaster Risk Reduction, Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community Based DRR, Structural- nonstructural measures, Roles and responsibilities of- community, Panchayati Raj Institutions / Urban Local Bodies (PRIs/ULBs), States, Centre, and other stakeholders- Early Warning System – Advisories from Appropriate Agencies.- Relevance of indigenous Knowledge, appropriate technology and Local resources

**UNIT III DISASTER MANAGEMENT 2**

Components of Disaster Management – Preparedness of rescue and relief, mitigation, rehabilitation and reconstruction- Disaster Risk Management and post disaster management – Compensation and Insurance- Disaster Management Act (2005) and Policy - Other related policies, plans, programmes and legislation - Institutional Processes and Framework at State and Central Level- (NDMA –SDMA-DDMA-NRDF- Civic Volunteers)

**UNIT IV TOOLS AND TECHNOLOGY FOR DISASTER MANAGEMENT 2**

Early warning systems -Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and Preparedness, – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment. - Elements of Climate Resilient Development –Standard operation Procedure for disaster response – Financial planning for disaster Management.

**UNIT V DISASTER MANAGEMENT: CASE STUDIES 2**

Discussion on selected case studies to analyze the potential impacts and actions in the context of disasters-Landslide Hazard Zonation: Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field works related to disaster management.- Field work-Mock drill -

**TOTAL:10 PERIODS**

**Course Outcomes:**

Upon Successful Completion of the course the students will be able to

CO1: To impart knowledge on the concepts of Disaster, Vulnerability and Disaster Risk reduction (DRR)

CO2: To enhance understanding on Hazards, Vulnerability and Disaster Risk Assessment prevention and risk reduction

CO3: To develop disaster response skills by adopting relevant tools and technology

CO4: Enhance awareness of institutional processes for Disaster response in the country

CO5: Develop rudimentary ability to respond to their surroundings with potential Disaster response in areas where they live, with due sensitivity

**Text Books:**

1.Taimpo (2016), Disaster Management and Preparedness, CRC Publications 2023

2. Singh R (2017), Disaster Management Guidelines for earthquakes, Landslides, Avalanches and tsunami, Horizon Press Publications 2022

**References:**

- Government of India, National Disaster Management Policy, 2019.

Course Code	<b>ENVIRONMENTAL SCIENCE AND SUSTAINABILITY</b>	L	T	P	C
MC3305		2	0	0	0

**COURSE OBJECTIVES:**

- To introduce the basic concepts of environment, ecosystems and biodiversity and emphasize on the biodiversity of India and its conservation.
- To impart knowledge on the causes, effects and control or prevention measures of environmental pollution and natural disasters.
- To facilitate the understanding of the global and Indian scenario of renewable and nonrenewable resources, causes of their degradation and measures to preserve them.
- To familiarize the concept of sustainable development goals and appreciate the interdependence of economic and social aspects of sustainability, recognize and analyze climate changes, concept of carbon credit and the challenges of environmental management.
- To inculcate and embrace sustainability practices and develop a broader understanding on green materials, energy cycles and analyze the role of sustainable urbanization.

**UNIT I ENVIRONMENT AND BIODIVERSITY 2**

Definition, scope and importance of environment – need for public awareness. Ecosystem and Energy flow– ecological succession. Types of biodiversity: genetic, species and ecosystem diversity– values of biodiversity, India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ.

**UNIT II ENVIRONMENTAL POLLUTION 2**

Causes, Effects and Preventive measures of Water, Soil, Air and Noise Pollution. Solid, Hazardous and E-Waste management. Case studies on Occupational Health and Safety Management system (OHASMS). Environmental protection, Environmental protection acts.

**UNIT III RENEWABLE SOURCES OF ENERGY 2**

Energy management and conservation, New Energy Sources: Need of new sources. Different types of new energy sources. Applications of- Hydrogen energy, Ocean energy resources, Tidal energy conversion. Concept, origin and power plants of geothermal energy.

**UNIT IV SUSTAINABILITY AND MANAGEMENT 2**

Development, GDP, Sustainability- concept, needs and challenges-economic, social and aspects of sustainability-from unsustainability to sustainability-millennium development goals, and protocols-Sustainable Development Goals-targets, indicators and intervention areas Climate change- Global, Regional and local environmental issues and possible solutions-case studies. Concept of Carbon Credit, Carbon Footprint. Environmental management in industry-A case study.

**UNIT V SUSTAINABILITY PRACTICES 2**

Zero waste and R concept, Circular economy, ISO 14000 Series, Material Life cycle assessment, Environmental Impact Assessment. Sustainable habitat: Green buildings, Green materials, Energy efficiency, Sustainable transports. Sustainable energy: Non-conventional Sources, Energy Cycles-carbon cycle, emission and sequestration, Green Engineering: Sustainable urbanization- Socio-economical and technological change.

**TOTAL : 10 PERIODS**

**Course Outcomes:**

**Upon Completion of the course the students will be able to**

**CO1:** To recognize and understand the functions of the environment, ecosystems and biodiversity and their conservation.

**CO2:** To identify the causes, effects of environmental pollution and natural disasters and contribute to the preventive measures in the society.

**CO3:** To identify and apply the understanding of renewable and non-renewable resources and contribute to the sustainable measures to preserve them for future generations.

**CO4:** To recognize the different goals of sustainable development and apply them for suitable technological advancement and societal development.

**CO5:** To demonstrate the knowledge of sustainability practices and identify green materials, energy cycles and the role of sustainable urbanization.

### MANDATORY COURSES – II

Course Code	<b>WELL-BEING WITH TRADITIONAL PRACTICES-YOGA, AYURVEDA AND SIDDHA</b>	L	T	P	C
MC3401		2	0	0	0

#### **COURSE OBJECTIVES:**

- To enjoy life happily with fun filled new style activities that help to maintain health also
- To adapt a few lifestyle changes that will prevent many health disorders
- To be cool and handbill every emotion very smoothly in every walk of life
- To learn to eat cost effective but healthy foods that are rich in essential nutrients
- To develop immunity naturally that will improve resistance against many health disorders

#### **UNIT I HEALTH AND ITS IMPORTANCE 2**

Health: Definition - Importance of maintaining health - More importance on prevention than treatment Ten types of health one has to maintain - Physical health - Mental health - Social health - Financial health - Emotional health - Spiritual health - Intellectual health - Relationship health - Environmental health - Occupational/Professional health. Present health status - The life expectancy-present status - mortality rate - dreadful diseases - Non-communicable diseases (NCDs) the leading cause of death - 60% - heart disease - cancer - diabetes - chronic pulmonary diseases - risk factors - tobacco - alcohol - unhealthy diet - lack of physical activities.

Types of diseases and disorders - Lifestyle disorders - Obesity - Diabetes - Cardiovascular diseases - Cancer - Strokes - COPD - Arthritis - Mental health issues. Causes of the above diseases / disorders - Importance of prevention of illness - Takes care of health - Improves quality of life - Reduces absenteeism - Increase satisfaction - Saves time Simple lifestyle modifications to maintain health - Healthy Eating habits (Balanced diet according to age) Physical Activities (Stretching exercise, aerobics, resisting exercise) - Maintaining BMI-Importance and actions to be taken

#### **UNIT II DISASTER RISK REDUCTION (DRR) 2**

Role of diet in maintaining health - energy one needs to keep active throughout the day - nutrients one needs for growth and repair - helps one to stay strong and healthy - helps to prevent diet-related illness, such as some cancers - keeps active and - helps one to maintain a healthy weight - helps to reduce risk of developing lifestyle disorders like diabetes - arthritis - hypertension - PCOD - infertility - ADHD - sleeplessness -helps to reduce the risk of heart diseases - keeps the teeth and bones strong.

Balanced Diet and its 7 Components - Carbohydrates - Proteins - Fats - Vitamins - Minerals - Fibre and Water. Food additives and their merits & demerits - Effects of food additives - Types of food additives - Food additives and processed foods - Food additives and their reactions

**UNIT III                  ROLE OF AYURVEDA & SIDDHA SYSTEMS IN MAINTAINING HEALTH                  2**

AYUSH systems and their role in maintaining health - preventive aspect of AYUSH - AYUSH as a soft therapy. Secrets of traditional healthy living - Traditional Diet and Nutrition - Regimen of Personal and Social Hygiene - Daily routine (Dinacharya) - Seasonal regimens (Ritucharya) - basic sanitation and healthy living environment - Sadvritta (good conduct) - for conducive social life.

Principles of Siddha & Ayurveda systems - Macrocosm and Microcosm theory - Pancheekarana Theory / (Five Element Theory) 96 fundamental Principles - Uyir Thathukkal (Tri-Dosha Theory) - Udal Thathukkal Prevention of illness with our traditional system of medicine

Primary Prevention - To decrease the number of new cases of a disorder or illness - Health promotion/education, and - Specific protective measures - Secondary Prevention - To lower the rate of established cases of a disorder or illness in the population (prevalence) - Tertiary Prevention - To decrease the amount of disability associated with an existing disorder

**UNIT IV    MENTAL WELLNESS    2**

Emotional health - Definition and types - Three key elements: the subjective experience - the physiological response - the behavioral response - Importance of maintaining emotional health - Role of emotions in daily life -Short term and long term effects of emotional disturbances - Leading a healthy life with emotions - Practices for emotional health - Recognize how thoughts influence emotions - Cultivate positive thoughts - Practice self-compassion - Expressing a full range of emotions. Stress management - Stress definition - Stress in daily life - How stress affects one's life - Identifying the cause of stress - Symptoms of stress - Managing stress (habits, tools, training, professional help) - Complications of stress mismanagement. Sleep - Sleep and its importance for mental wellness - Sleep and digestion. Immunity - Types and importance - Ways to develop immunity

**UNIT V    YOGA    2**

Definition and importance of yoga - Types of yoga - How to Choose the Right Kind for individuals according to their age - The Eight Limbs of Yoga - Simple yogasanas for cure and prevention of health disorders - What yoga can bring to our life.

**TOTAL:10 PERIODS****Course Outcomes:**

Upon Successful Completion of the course the students will be able to

CO1:Embrace enjoyable, health-promoting activities to foster happiness and well-being.

CO2: Adopt lifestyle changes aimed at preventing various health issues.

CO3: Cultivate emotional resilience to navigate life's challenges with ease.

CO4: Learn to incorporate cost-effective, nutrient-rich foods into daily dietary habits.

CO5: Enhance natural immunity to bolster resistance against a range of health disorders

**Text Books:**

1. Nutrition and Dietetics - Ashley Martin, Published by White Word Publications, New York, NY 10001, USA 2023

2. Yoga for Beginners\_ 35 Simple Yoga Poses to Calm Your Mind and Strengthen Your Body, by Cory Martin, Althea Press, 2023

Course Code	<b>HISTORY OF SCIENCE AND TECHNOLOGY IN INDIA</b>	L	T	P	C
MC3402		2	0	0	0

**COURSE OBJECTIVES:**

- To Understand key historical concepts and perspectives relevant to the study of science and technology in India.
- To Explore the historiography of Indian science and technology through the works of influential historians.
- To Trace the development of science and technology in ancient and medieval India, including interactions with other civilizations.
- To Analyze the impact of colonialism on Indian science and technology, including responses to Western influence.
- To Examine the growth of techno-scientific institutions in colonial India

**UNIT I CONCEPTS AND PERSPECTIVES 2**

Meaning of History Objectivity, Determinism, Relativism, Causation, Generalization in History; Moral judgment in history Extent of subjectivity, contrast with physical sciences, interpretation and speculation, causation verses evidence, concept of historical inevitability, Historical Positivism. Science and Technology-Meaning, Scope and Importance, Interaction of science, technology & society, Sources of history on science and technology in India.

**UNIT II HISTORIOGRAPHY OF SCIENCE AND TECHNOLOGY IN INDIA 2**

Introduction to the works of D.D. Kosambi, Dharmpal, Debiprasad Chattopadhyay, Rehman, S. Irfan Habib, Deepak Kumar, Dhruv Raina, and others.

**UNIT III SCIENCE AND TECHNOLOGY IN ANCIENT INDIA 2**

Technology in pre-historic period Beginning of agriculture and its impact on technology Science and Technology during Vedic and Later Vedic times Science and technology from 1st century AD to C-1200.

**UNIT IV SCIENCE AND TECHNOLOGY IN MEDIEVAL INDIA 2**

Legacy of technology in Medieval India, Interactions with Arabs Development in medical knowledge, interaction between Unani and Ayurveda and alchemy Astronomy and Mathematics: interaction with Arabic Sciences Science and Technology on the eve of British conquest

**UNIT V SCIENCE AND TECHNOLOGY IN COLONIAL INDIA 2**

Science and the Empire Indian response to Western Science Growth of techno-scientific institutions

**TOTAL:10 PERIODS**

**Course Outcomes:**

Upon Successful Completion of the course the students will be able to

CO1: Understand historical concepts in the context of Indian science and technology.

CO2: Explore diverse historiography of Indian science and technology.

- CO3: Trace the development of science and technology in ancient and medieval India  
 CO4: Analyze the impact of colonialism on Indian science and technology  
 CO5: Develop critical thinking skills to assess the relationship between science, technology, and society in India's history

**Text Books:**

2. Science and Society in Early India" by D.P. Chattopadhyaya 2023

**References:**

1. History of Science and Technology in India: Vol 1-5" by Debiprasad Chattopadhyaya 2022
2. Science, Technology, Imperialism, and War" by Debiprasad Chattopadhyaya 2021

Course Code	<b>POLITICAL AND ECONOMIC THOUGHT FOR A HUMANE SOCIETY</b>	L	T	P	C
MC3403		2	0	0	0

**COURSE OBJECTIVES:**

This course will begin with a short overview of human needs and desires and how different political-economic systems try to fulfill them. In the process, we will end with a critique of different systems and their implementations in the past, with possible future directions

**UNIT I CAPITALISM 2**

Capitalism – Free markets, demand-supply, perfect competition, laissez-faire, monopolies imperialism. Liberal democracy

**UNIT II COMMUNISM 2**

Fascism and totalitarianism. World war I and II. Cold war. Communism – Mode of production, theory of labour, surplus value, class struggle, dialectical materialism, historical materialism, Russian and Chinese models.

**UNIT III WELFARE STATE 2**

Welfare state. Relation with human desires. Empowered human beings, satisfaction. (3 lectures) Gandhian thought. Swaraj, Decentralized economy & polity, Community. Control over one’s lives. Relationship with nature

**UNIT IV ESSENTIAL ELEMENTS OF INDIAN CIVILIZATION 2**

Technology as driver of society, Role of education in shaping of society. Future directions. (Refs: Nandkishore Acharya, David Dixon, Levis Mumford)

**UNIT V SCIENCE AND TECHNOLOGY IN COLONIAL INDIA 2**

Science and the Empire Indian response to Western Science Growth of techno-scientific institutions

**TOTAL:10 PERIODS**

**Course Outcomes:**

Upon Successful Completion of the course the students will be able to:

The students will get an understanding of how societies are shaped by philosophy, political and economic system, how they relate to fulfilling human goals & desires with some case studies of how different attempts have been made in the past and how they have fared.

**Text Books:**

1. Adam Smith, J.S.MILL 2022

**References:**

1. A Nagaraj, M K Gandhi, JC Kumarappa 2023

Course Code	<b>STATE, NATION BUILDING AND POLITICS IN INDIA</b>	L	T	P	C
MC3404		2	0	0	0

**COURSE OBJECTIVES:**

The objective of the course is to provide an understanding of the state, how it works through its main organs, primacy of politics and political process, the concept of sovereignty and its changing contours in a globalized world. In the light of this, an attempt will be made to acquaint the students with the main development and legacies of national movement and constitutional development in India, reasons for adopting a Parliamentary-federal system, the broad philosophy of the Constitution of India and the changing nature of Indian Political System. Challenges/ problems and issues concerning national integration and nation-building will also be discussed in the contemporary context with the aim of developing a future vision for a better India.

<b>UNIT I</b>	<b>CONCEPTS AND PERSPECTIVES</b>	<b>2</b>
Understanding the need and role of State and politics. Development of Nation-State, sovereignty, sovereignty in a globalized world.		
<b>UNIT II</b>	<b>ORGANS OF STATE</b>	<b>2</b>
Organs of State – Executive, Legislature, Judiciary. Separation of powers, forms of government unitary-federal, Presidential-Parliamentary, The idea of India.		
<b>UNIT III</b>	<b>NATIONAL AWAKENING</b>	<b>2</b>
1857 and the national awakening. 1885 Indian National Congress and development of national movement – its legacies.		
<b>UNIT IV</b>	<b>CONSTITUTION</b>	<b>2</b>
Constitution making and the Constitution of India. Goals, objective and philosophy. Need for a Federal system		
<b>UNIT V</b>	<b>NATIONAL INTEGRATION AND NATION-BUILDING</b>	<b>2</b>
Challenges of nation-building – State against democracy (Kothari) New social movements. The changing nature of the Indian Political System, the future scenario.		

**TOTAL:10 PERIODS**

**Course Outcomes:**

Upon Successful Completion of the course the students will be able to:  
 It is expected that this course will make students aware of the theoretical aspect of the state, its organs, its operationalization aspect, the background and philosophy behind the founding of the present political system, broad streams and challenges of national integration and nation-building in India. It will equip the students with the real understanding of our political system/ process in correct perspective and make them sit up and think for devising ways for better participation in the system with a view to making the governance and delivery system better for the common man who is often left unheard and unattended in our democratic setup besides generating a lot of dissatisfaction and difficulties for the system.

**Text Books:**

Course Code	<b>INDUSTRIAL SAFETY</b>	L	T	P	C
MC3405		2	0	0	0

**COURSE OBJECTIVES:**

- To Understand the Introduction and basic Terminologies safety.
- To enable the students to learn about the Important Statutory Regulations and standards.
- To enable students to Conduct and participate in the various Safety activities in the Industry.
- To have knowledge about Workplace Exposures and Hazards.
- To assess the various Hazards and consequences through various Risk Assessment Techniques.

**UNIT I SAFETY TERMINOLOGIES 2**  
 Hazard-Types of Hazard- Risk-Hierarchy of Hazards Control Measures-Lead indicators- lag Indicators-Flammability- Toxicity Time-weighted Average (TWA) - Threshold LimitValue (TLV) - Short Term Exposure Limit (STEL)- Immediately dangerous to life or health (IDLH)- acute and chronic Effects- Routes of Chemical Entry-Personnel Protective Equipment- Health and Safety Policy-Material Safety Data Sheet MSDS

**UNIT II STANDARDS AND REGULATIONS 2**  
 Indian Factories Act-1948- Health- Safety- Hazardous materials and Welfare- ISO 45001:2018 occupational health and safety (OH&S) - Occupational Safety and Health Audit IS14489:1998- Hazard Identification and Risk Analysis- code of practice IS 15656:2006

**UNIT III SAFETY ACTIVITIES 2**  
 Toolbox Talk- Role of safety Committee- Responsibilities of Safety Officers and Safety Representatives- Safety Training and Safety Incentives- Mock Drills- On-site Emergency Action Plan- Off-site Emergency Action Plan- Safety poster and Display- Human Error Assessment
